Downloading and Installing CSET

The Cyber Security Evaluation Tool (CSET) provides a systematic, disciplined, and repeatable approach for evaluating an organization's security posture. CSET is a desktop software tool that guides asset owners and operators through a step-by-step process to evaluate industrial control system (ICS) and information technology (IT) network security practices. Users can evaluate their own cybersecurity stance using many recognized government and industry standards and recommendations.

CSET v11.5, includes the Cyber Performance Goals (CPG) Assessment. The CPG's are intended to outline high-priority cybersecurity goals and associated actions to enable progress towards a consistent baseline across all critical infrastructure sectors. The CPG's are a tool that individual critical infrastructure operators can use to evaluate their own cybersecurity posture and drive investments towards meaningfully reducing the likelihood and impact of known risks and adversary techniques. Learn more at Cross-Sector Cybersecurity Performance Goals | CISA

You can find the latest version of CSET v11.5 and older legacy versions of the software on GitHub.

Download CSET v11.5 here.

The Cyber Security Evaluation Tool (CSET®) is a Department of Homeland Security (DHS) product that assists organizations in protecting their key national cyber assets. It was developed under the direction of the CSET Policy, Plans, and Engagement (Surface Cyber Policy) Division by cybersecurity experts and with assistance from the Idaho National Laboratory (INL). This tool provides users with a systematic and repeatable approach for assessing the security posture of their cyber systems and networks. It includes both high-level and detailed questions related to all industrial control and IT systems.
