Subject: Non-research: NCEZID-Extension-30-day-0920-1307-Shigella Hypothesis Generating Questionnaire; NCEZID #103019AG

Thanks, Rudith.

There have been no changes to this project. The original non-research determination stands:

CDC has developed a Shigella hypothesis generating questionnaire (SHGQ) to use in Shigella infection clusters and outbreaks. CDC will be providing the SHGQ to states for use in multi-state and single-state clusters and coordinate surveillance of Shigella clusters with states. Results of the surveys will be used to inform local public health response and may be published in peer-reviewed journals. As the purpose of this activity is to collect information by a public health authority and limited to that necessary to identify, monitor, and investigate onsets of disease, it is consistent with non-research public health surveillance as defined by 45 CFR 46.102(l)(2).

Good morning Laura,

Please find attached the OMB Extension package for Shigella Hypothesis Generating Questionnaire, currently approved under OMB Control # 0920-1307. As discussed, there are no changes to this project since the last OMB approval. The attached Supporting Statement A includes all the details about this package. Also attached is the most recent human subjects determination and data collection instruments. Please let me know whether the original non-research determination still stands.

STARS Tracking Number: 0900f3eb81a2970e.

Thanks,
