2022 Hop Production Down 12 Percent From Last Year

Production for Idaho, Oregon, and Washington in 2022 totaled 101 million pounds, down 12 percent from the 2021 crop of 116 million pounds. Combined area harvested for Idaho, Oregon, and Washington in 2022 totaled 59,785 acres, down 2 percent from the record high 2021 level of 60,872 acres. Harvested acreage increased in Oregon but decreased in Idaho and Washington. The United States hop yield, at 1,694 pounds per acre, is down 206 pounds from a year ago.

Washington produced 71 percent of the United States hop crop for 2022; while Idaho accounted for 16 percent and Oregon accounted for 13 percent. In Washington, Citra^R, Columbus/Tomahawk^R/Zeus, Mosaic^R, Cascade, and Simcoe^R were the five leading varieties, accounting for 54 percent of the State's hop production. In Idaho, Mosaic^R, Citra^R, Columbus/Tomahawk^R/Zeus, Cascade, and Idaho 7^R were the major varieties, accounting for 59 percent of the State's hop production. In Oregon, Citra^R, StrataTM, Mosaic^R, Cascade, and Nugget were the major varieties, accounting for 65 percent of the State's hop production.

The 2022 value of production for the United States totaled \$618 million, down 7 percent from the previous year.

¹ Includes data withheld to avoid disclosure of individual operations and varieties not listed.

² Includes 982 acres of organic hops for 2022 with yield equal to 1,296 pounds per acre and production at 1,273,083 pounds.

Statistical Methodology

Survey Procedures: Grower surveys are conducted in the three estimating States to collect acreage, production, and price data from growers.

Estimating Procedures: Information obtained from the hops growers surveys are used to establish estimates of hops. These estimates are reviewed for errors, reasonableness, and consistency with historical estimates and industry check data.

Revision Policy: All hop estimates are subject to revision the following year based on a thorough review of all available data.

Reliability: Survey results are subject to non-sampling errors such as omission, duplication, imputation for missing data, and mistakes in reporting, recording, and processing the data. These errors cannot be measured directly, but are minimized through rigid quality controls in the data collection process and a careful review of all reported data for consistency and reasonableness.
