# Introduction

This application is for requesting an **Endangered Species Act (ESA) scientific research or enhancement permit** to take<sup>1</sup>, import, or export
National Marine Fisheries Service (NMFS) protected
species, including:

- Smalltooth sawfish
- Sea turtles (in-water)
- Sturgeon (Atlantic and shortnose)

Please see our <u>webpage on programmatic permitting</u> to determine if your methods qualify and when to submit your application on the appropriate cycle.

## Need help or have questions?

Visit our <u>ESA scientific research permit web page</u>, see <u>Additional Information</u> on page 28, or contact us at <u>nmfs.pr1.apps@noaa.gov</u>.

# When filling out your application:

- Your application must be a stand-alone document, readable to a layperson.
- If you do not follow these instructions, your application will be returned.
- We will not consider your application if you have overdue reports.
- You will need to enter this information in our online permit system, APPS <a href="https://apps.nmfs.noaa.gov/">https://apps.nmfs.noaa.gov/</a>.

# Entering your application in APPS

- Save your application every 20 minutes or you will lose information!
- An \* indicates a required field.
- Consider using these instructions as a template to draft your application in Word. Then cut and paste into APPS.
- Special characters may be either lost or migrated incorrectly.
- Refer to <u>Chapter 2</u> for how to navigate APPS.
- Your application will remain in draft mode until you submit.
- Attachments cannot be larger than 20MB – contact us if you need to attach larger files.

<sup>&</sup>lt;sup>1</sup> A take under the ESA means to harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or attempt to do any of the preceding.

# **Application Instructions**

## **Project Information**

**File Number**: This number is generated by APPS and cannot be changed. To facilitate processing, reference this File No. in correspondence with our office.

- \*Project Title (up to 255 characters): Provide a concise title that includes activities, species (or taxa if multiple species), location, and purpose. For example:
  - Vessel surveys, sampling, and tagging sea turtles in the Gulf of Mexico to characterize population structure, forging ecology, and movement patterns.
- \*Project Status: The project status (New or Renewal) is automatically selected based on your answers in the APPS pre-application guide (PAG). Do not change this.

**Previous Federal or State Permit #:** If applicable, enter your most recent and closely related NMFS permit number. Otherwise leave blank.

- **\*Permits Requested:** One or more permits will be listed based on your answers in the APPS PAG. If the options are incorrect, please contact us at <a href="mailto:nmfs.pr1.apps@noaa.gov">nmfs.pr1.apps@noaa.gov</a>.
- \*Where Will the Activities Occur? One or more general locations will be listed based on your answers in the APPS pre-application guide.
- \*Research Timeframe: Enter the desired start and end dates of the entire project in the following format: MM/DD/YYYY. Refer to <u>Additional Information</u> on page 28 for details about when to apply and consult our <u>programmatic permitting web page</u>. The start date must be after the date you submit the application and should consider how long it may take to process your request, at least 6 months. Permits may be requested for up to 10 years.
- \*Sampling Season/Project Duration (up to 1,000 characters): Describe the annual season(s) of work including the months and frequency (i.e., when and how many times per year, how frequently will you conduct your activities?). If year-round, indicate when activities are most likely to occur and how frequently.
- \*Abstract (up to 2,000 characters): provide a short summary that must include:
  - Purpose of the research or enhancement.
  - Species that may be taken, imported, or exported (common names).
  - Take activities (e.g., capture, sampling, tagging), import, or export

- Where your activities will occur and where animals or samples will be imported or to where they will be exported.
- Requested duration of the permit.

## **Project Description**

\*Project Purpose: Hypothesis/Objectives and Justification (up to 64,000 characters)

We recommend you provide the information in this order:

- 1. Discuss the **need for the research** and the **research questions** you want to answer.
- 2. Briefly summarize **published findings** related to your research.
  - If you previously held or worked under a permit, use literature citations from that work to discuss how you previously met your objectives; and
  - Use other published literature on the subject.
- 3. Describe how this study is different from, builds upon, or duplicates past research.
- 4. If proposing **novel procedures**, include a discussion on results from pilot studies or studies on other species, if available.
- 5. Identify your **objectives or hypotheses** based on the above information.
- 6. Discuss why your project **must involve ESA-listed species** (e.g., explain why similar results could not be obtained by using an alternative non-endangered or captive surrogate).
- 7. Discuss how your project will contribute to the objectives identified in the <u>species'</u> recovery or conservation plan or otherwise respond to recommendations of a scientific body charged with management of the species.

# Bona fide research

The information you provide in your application must demonstrate that the proposed activities would further a bona fide and necessary or desirable scientific purpose, taking into account the benefits anticipated for the target species.

- 8. If your goals are to **directly enhance the survival or propagation** of an ESA-listed species, explain how your project will achieve these goals.
- 9. **Take Number Rationale**: Explain how you determined your sample size or take numbers and why they are needed to meet the objectives.
  - For example, did you base your numbers on previously reported encounter rates or abundance estimates for your study area and the number of surveys to be conducted?
  - If appropriate for your study, include a power analysis or other sample size estimation to show whether the sample size is sufficient to provide statistically significant or otherwise robust results.
  - Your take numbers should be realistic based on your future research plans as well as your previous experience. We will examine reported take numbers from your annual reports and compare those to the take numbers you are requesting in your new application.
  - Discuss whether the **same individual animals may be taken more than once** a year.
    - If individual animals can be identified in real time, indicate the number of times known individuals may be intentionally taken in a year (e.g., recapture for instrument retrieval, multiple biopsy samples per year, repeat surveys in the same area for identifiable individuals). Explain why multiple takes of the same individual are needed to meet your objectives.

## \*Project Description (up to 64,000 characters)

Please see our <u>webpage on programmatic permitting</u> to determine if your methods may fall under an existing programmatic ESA Section 7 biological opinion with expedited processing. If you wish to have your work covered by a programmatic opinion, please ensure your described methods fit within its scope. Please contact us if you have questions.

#### **Overview**

Provide a **brief overview of a typical day** in the field or laboratory facility and the suite of activities you intend to perform on each animal during an encounter or capture event. Discuss the order in which you'll perform the different methods. Include where your work will happen, especially if different projects occur in different locations.

#### **Methods**

Describe your methods. Your narrative description must match your APPS take table (see Take Table section below).

#### You must provide:

- Clear descriptions of all methods (i.e., each take action and procedure in your APPS Take table). See Table 1 below for guidance on what details to include.
- A brief statement of each method's or suite of method's purpose (i.e., how the activities relate to meeting your objectives).
- Identify the **size and life stages** of animals for which you are requesting take.
  - For sea turtles, indicate the <u>minimum</u> size in straight carapace length of the animals you expect to capture and for each procedure you are requesting.
  - For sturgeon and sawfish, use the size classes in the sidebar. Within each life stage, define your target size range.
- List out the suite of procedures that will be performed on only a subset of animals and explain how you will decide which animals will receive which procedures. Is this based on sex, life stage, body size, body condition, health or appearance, needed sample size, etc.?
- If you will intentionally target compromised animals, explain the criteria you would use and describe the conditions of the animals.
- If you have multiple projects, it is helpful to name them by project number or title and include project names in the Details column of the <u>Take</u> Table.

# Fish Life Stages

#### Atlantic sturgeon

- ELS (early life stages; eggs to larvae (<60mm Total Length [TL])
- Juveniles (< 1000 mm Fork Length [FL])
- o Sub-adults (1000-1300 mm FL)
- Adults (> 1300 mm FL)

#### **Shortnose sturgeon**

- ELS (early life stages; eggs to larvae (<60mm TL)</li>
- Juveniles (< 450 mm FL)</li>
- o Sub-adults (450-600 mm FL)
- Adults (> 600 mm FL)

#### Smalltooth sawfish

- Neonate/Juvenile (< 2,200 mm total length)
- Sub-adult/Adult ( ≥ 2,200 mm total length)

- It is also helpful to reference take table lines in the narrative that correspond to the take actions and procedures.
- Discuss whether animals of the same species (i.e., conspecifics) may be taken (e.g., harassed, captured) during your work.
- If animals will be **captured under another legal source** (e.g., bycaught in commercial federal fishery) prior to research or enhancement, cite the specific legal authority by name, title, or permit number for the capture of these animals. Clarify which activities you are requesting to perform after the capture and how they will occur in relation to the other legal action. Example citations: "ESA Section 7 biological opinion for the Gulf of Mexico and South Atlantic spiny lobster fishery (NMFS 2009)" or "ESA Section 10 Permit No. XXXXXX".

**Note**: You must demonstrate that the <u>annual</u> Expected Take numbers requested for your activities do not exceed the number authorized for the original capture authority, such as the cited biological opinion's incidental take statement.

- **Sea turtle aerial and vessel surveys:** Only request take for observations or monitoring surveys with no intent to contact or capture animals if:
  - 1. The encounter will last more than 5 minutes, and
  - 2. For in-water work, you will approach animals within 50 yards.

Contact us if you need help determining if your survey requires a permit.

- **Data analysis**: Provide a brief description of how data and/or samples will be analyzed.
- **Opportunistic research**: If there are species in the same taxa that are not your main research focus, but that you would study if opportunistically captured, include a discussion of them in this section. Describe how the research would fit within your objectives and which methods you would use to study these species. Include rows for these species in your take table.
- **Mitigation measures** that are inherent to your methods may be included in this section or in the <u>Effects and Mitigation</u> section below.
- **Figures and photographs** that illustrate your methods. You can attach them on the <u>Project Supplemental Information</u> page.

• **Cite references** for the methods where applicable, but do not substitute a literature citation for a complete description of the methods. You can attach a Literature Cited on the <u>Project Supplemental Information</u> page. References must be made available upon request.

procedures	Fr. a		
Captive experiments	In addition to describing the procedures of the experiment on the animals, describe their care and maintenance, including a complete description of the facilities where they will be maintained. This includes but is not limited to:		
	<ul> <li>Dimensions of the pools or other holding facilities</li> <li>Number, sex, and age of animals by species to be held in each tank/enclosure</li> <li>Water supply, amount, quality, power supply, and backup redundancy</li> <li>Diet, amount and type</li> <li>Sanitation &amp; quarantine practices</li> </ul>		
	Indicate the final disposition of animals after completion of experiments (e.g., for sturgeon: continued maintenance, euthanasia or transfer to another permitted facility, if appropriate).		
	For fish species: Provide justification if a captive breeding program will be established in accordance with the species conservation plan or recovery plan. If requested by NMFS, indicate if you are willing to participate in a captive breeding program. If not, describe how you will prevent breeding.		
Capture and	Type of capture (e.g., hand, gill net [drift or anchored], trawl, seine) and gear		
restraint	description (e.g., net dimensions and mesh size)		
	Deployment methods (e.g., boat type, net set, tow or soak times)		
	Configuration, duration, and monitoring of net sets (how often net set is checked)		
	Number and roles of personnel		
	Numbers of animals captured at a time		
	Number of animals processed at a time		
	Dimensions and type of holding container/manner of restraint		
	Anesthesia/sedation (see Administer Drugs above)		
	Manner of release		
	Duration of restraint/holding from capture to release		
	If <b>recapturing</b> animals, indicate under what circumstances they will be		
	immediately released without processing or fully or partially processed		
	(i.e., what will be done to them on recapture).		
	For sea turtles: Identify an on-call veterinarian and nearby permitted		
	rehabilitation facility available for emergencies

#### **Non-target ESA-listed Sea Turtle and Fish Species**

Discuss whether and how non-target ESA-listed sea turtles or fish species may be unintentionally captured or otherwise affected. These are species that co-occur with your target species and that could be harassed or taken during your work, but that you will not opportunistically incorporate into your study.

Include these non-target species on separate rows in the <u>Take Table</u> if you expect take (e.g., unintentional harassment or capture). For ESA species designated by Distinct Population Segment, specify the DPSs.

Other non-target taxa (e.g., marine mammals, seagrasses) should be addressed in the <u>Effects and Mitigation</u> section below.

## **Project Supplemental Information**

#### **Attach a Supplemental Information File**

You can attach up to 10 files in APPS to provide additional information.

- Preferred file formats: Microsoft Word, Excel, or PDF.
- The maximum file size allowed is 20 MB.
- Audio and video files (such as mp3, m4b, wav) cannot be uploaded. Contact us if you need assistance.
- On the Location screen you will be asked to attach a map.

#### **Status of the Affected Species** (up to 2,000 characters)

**If choosing "range-wide"** in the Stock/Listing Unit column in a row of the take table, indicate the specific DPSs you are targeting, their status under the MMPA and/or ESA, and location. Otherwise, put N/A and choose the specific stock or DPS in the take table.

#### \*Mortalities (up to 5,000 characters)

If authorization for mortality<sup>3</sup> (euthanasia/intentional<sup>4</sup> or accidental/unintentional) is proposed:

- What activities could result in mortality and how?
- What is the maximum number of animals of each species/DPS that could be seriously injured, unintentionally die, or be euthanized annually and over the life of the permit? For example, two serious injury/mortalities per year, not to exceed four over the life of the permit.
- **Justify the number** of mortalities requested.
- Briefly summarize mortalities that have occurred during the previous five years
  of your permitted activities using the same or similar techniques; include
  circumstances and cause of death, and how a similar outcome can be prevented.
- Explain **why it's not feasible to use other methods** that won't result in mortality.

<sup>&</sup>lt;sup>3</sup> Caused by the presence or actions of researchers including but not limited to deaths or serious injuries sustained during capture and handling, including predation or while attempting to avoid researchers or escape capture, or resulting from infections related to invasive procedures such as sampling or tagging.

<sup>&</sup>lt;sup>4</sup> This includes euthanasia for humane reasons (e.g., if working with compromised/comatose animals).

#### • Euthanasia of captive fish:

- Under what circumstances is euthanasia conducted (e.g., directed research, final disposition)?
- o How is it decided, conducted (including use of drugs), and who conducts it?
- **Euthanasia may not be requested for sea turtles.** Euthanasia falls under the authority of the Sea Turtle Stranding and Salvage Network.
- What are the protocols for **necropsy and carcass disposal**? If necropsy cannot occur, explain why.

#### \*Effects and Mitigation (up to 64,000 characters)

**Discuss how Take Table actions** (Take Actions, Observe/Collect Method (e.g., capture), and Procedures) **will affect individual target and non-target animals**. You should discuss the effects of mortalities in the <u>Mortalities</u> section above.

Cite the **best available science** (i.e., peer-reviewed literature or other published data sources) and your experience (e.g., personal communication, annual permit reports). References must be made available upon request.

#### **Group together take actions with similar responses** and describe, as applicable:

- Typical behavioral and physiological responses
- Worst-case responses
- % of animals that typically exhibit each response type
- Average/estimated recovery time
- Wound healing time (e.g., from invasive sampling or tagging)
- Condition of animals on recapture/resight
- Recovery from sedation and/or handling
- Post-release behavior (immediate and long-term)
- Time it takes to resume normal behavior after harassment
- Tag retention and tag breakage
- Anticipated drag costs for sea turtle transmitters and attachments
- Effects on sensitive life stages (e.g., spawning adults)
- Effects to nesting female sea turtles if working during the nesting period

- Habitat use for animals in resident populations (based on telemetry data, resightings, recaptures)
- **Bycaught non-target species:** will they be released alive? Or is a certain percentage expected to be unintentionally harmed or killed?
- For **novel procedures**, discuss the most likely anticipated responses based on literature from studies on other species, if available, and any results from testing, if applicable.
- Discuss the anticipated **effects on the species or DPS**, especially if mortalities or reproductive effects are possible. On what is your determination based?

You may **include mitigation and monitoring protocols here or in the <u>Methods</u>** section above. Do not restate those here if they are included above; simply reference the section where the following information appears.

- For **invasive procedures**, including biological sampling and instrumentation, describe your steps to prevent infection. For example, describe if and how you will:
  - Prepare the sampling site by cleaning and disinfecting the tissue (for captured animals).
  - Use single-use, sterile instruments (e.g., needles).
  - Sterilize<sup>5</sup> other devices prior to use and in the field if contaminated including but not limited to use of cold sterilization
  - Administer prophylactic antibiotics to animals (include the drug, dosage, and route of administration).
- Describe your short- and long-term **post-procedure monitoring** protocols.
- Explain if and why monitoring or mitigation is not feasible for specific procedures, species, situations, etc., as needed.

<sup>5</sup> **Sterilization** destroys or eliminates all forms of microbial life and is carried out by physical or chemical methods (<u>CDC 2008</u>). **Disinfection** eliminates many or all pathogenic microorganisms, except bacterial spores, on inanimate objects usually by liquid chemicals (<u>CDC 2008</u>).

- For sea turtles: if veterinarian approval is required, attach the full protocol, any veterinary comments/recommendations, and the signed approval. This may include an approved Institutional Animal Care and Use Committee (IACUC)<sup>6</sup> proposal.
- Describe any mitigation you will take to avoid or minimize impacts to non-target
  protected species (e.g., marine mammals, sturgeon, sea turtles, corals, U.S. Fish and
  Wildlife Service species). Discuss whether and how they may be unintentionally
  harassed, captured, or otherwise affected. Identify if you require take of these species.
  For ESA species designated by DPS, specify the DPSs. Identify if you require takes of
  these species.

#### **Research Coordination**

- Describe how you will coordinate with other permit holders in your action area.
  - List their names and affiliations.
  - Explain how you will work together. For example, will you share vessels or coordinate the timing of surveys to avoid repeated takes of the same animals?
- Will you collaborate with other permitted researchers to share data? If so, list their names and affiliations and explain your collaboration plans.

#### **Attach a References File**

Attach a **bibliography** of references cited in this application. Referenced materials must be made available upon request, as needed for evaluation of the application and preparation of ESA or NEPA analyses. If a link to your referenced material is available, add the link to your References File.

\*Resources Needed to Accomplish Objectives (up to 4,000 characters and attach files if necessary)

• Explain how your expertise, facilities, and resources<sup>7</sup> are adequate to accomplish your proposed objectives and activities.

<sup>&</sup>lt;sup>6</sup> For sea turtle research: **NMFS researchers are required** to submit the NMFS IACUC-approved protocols and assurance letter.

<sup>&</sup>lt;sup>7</sup> **Expertise** includes a summary of the cumulative experience of you and your personnel. **Facilities** include such things as your existing infrastructure or laboratories. **Resources** include financial (e.g., current funding and/or history of securing funding); material (e.g., sampling equipment, UAS, boats); and other resources (e.g., collaborative partnerships that can be drawn on to support your work).

- List relevant proposals, contracts, grant awards, or letters of agreement that would demonstrate your resources. If funding is not yet secured, provide a history of funding over the past 5 years. Copies must be made available upon request.
- Indicate the status of other international, federal, state, or local authorizations and permits you have applied for, secured, or will apply for.

#### \*Disposition of Tissue Samples (up to 4,000 characters)

**Outline what will be done with the biological samples** during your research or enhancement and after your project is complete, as follows:

- 1. If you are performing your analyses in-house, state whether the samples will be consumed, destroyed, or curated.
- 2. If you are sending samples to another entity:
  - List the name, affiliation, and location of any person or institution that will receive, analyze, or curate samples.<sup>8</sup>
  - Include the sample type and purpose of transfer (type of analysis and/or curation). State whether samples will be consumed in analysis, destroyed, curated, or returned.
- 3. If samples will remain after the completion of your research, indicate if you will retain legal custody of the curated samples or if you will permanently transfer custody of the samples.

# \*Public Availability of Product/Publications (up to 800 characters)

Describe the end products of your proposed project and how they will be made available to the public.

## **Project Locations**

First, follow the guidance below to describe where you plan to work. Then, for each location, use the <u>Take Table</u> to list the species you expect to encounter and the procedures you will conduct in each location.

- Add **New Location**: provide information about one or more study areas
  - o General area (ocean basin)
  - State(s), as applicable.

<sup>&</sup>lt;sup>8</sup> Persons or institutions authorized to receive samples for analysis or curation related to the objectives of your permit are known as **Authorized Recipients**.

- Enter **Location Details**, as applicable:
  - Waterbody: enter names of rivers, estuaries, bays, etc. This is required for sturgeon research.
  - Latitude and longitude of your study area
  - o River miles (Begin Mile and End Mile)
  - Limits of your study area (e.g., to the U.S. EEZ, to the edge of the continental shelf, to 50m depth)
  - o Names of land masses where research will occur (e.g., islands).
- Attach File: Include a high quality map(s) to scale that clearly shows the location of your proposed activity and any environmental areas of interest. If possible, include a shapefile, Google Earth kmz/kml, or ASCII text file with lat/long data and the associated basic metadata with your application.

#### Take Table

The take table represents the **estimated** number of animals you propose to take, import, or export **annually** during your research.

Columns you will fill out in the take table in APPS:

- 1. **Select**: Leave this box blank unless you need to copy, move, or delete the row.
- 2. **Species**: Use the drop down list.
- 3. **Listing Unit/Stock**: Select the applicable ESA listing unit or DPS. Only choose Range-wide if your location has multiple populations of the same species and you cannot distinguish between them while in the field.
- 4. **Production/Origin**: Select from the drop-down list. Categories include Wild, Captive, Rehabilitation Facility, or All.

# Sea Turtle Vessel Surveys

For surveys that **do not involve** capture, but will remain within 50 yards for more than 5 minutes:

- Count every animal you approach within 50 yards, regardless of whether a behavioral reaction has occurred.
- Count 1 take per animal observed per day when you know it is the same animal.
- If unable to identify the animal, count each turtle seen as a new take.

- 5. **Life Stage**: Select from the drop-down list. You may enter take information for more than one life stage (e.g., adult versus juvenile) on separate rows or select a combination of life stages on the same row.
- 6. **Sex**: Select from the drop-down list. If your activity targets only one sex, indicate which. Otherwise select Male and Female.
- 7. **Expected Take**: This represents a reasonable estimate of the maximum number of individuals you will take, import, or export, annually.
- 8. **Take Action**: The "take action" is a generalized overview of how animals will be taken by your activities over the course of the year. If more than one action is proposed for your project, you must enter the takes on separate rows. For example, create separate take rows for animals that will be captured and sampled versus animals that will be harassed only.
- 9. **Observe/Collect Method**: Select the method of observation (e.g., survey, vessel) or collection/capture. Select only one observe/collect method per row. If multiple methods are proposed, you must provide take information in separate rows for each observe method.
- 10. **Procedures**: You will open a separate pop-up window with a species-specific list of activities. Check the boxes to select all activities to be performed concurrently on the same animals.
  - a. Choose "Other" if a proposed activity is not listed. In the Details box (see below), briefly describe what the "Other" means. For example, Other = carapace swabs.
  - b. You must select "Transport" if you will temporarily hold and perform experiments on **wild** animals (e.g., acoustics, imaging, feeding studies) in a facility.
  - c. If some animals will only get a **subset of procedures**, list this subset on a separate row.

# Sea Turtle Aerial Surveys

For surveys that will stay with animals for more than 5 minutes and flown at an altitude lower than 700 ft.:

 Count 1 take per sea turtle observed per day, regardless of the number of passes over the same animal.

- 11. **Transport**: You must select 'transport' from the procedure list to enable this section. You are required to provide the below information about the transport and holding of animals when prompted.
  - a. **Mode(s) of transportation:** Describe the vehicle or other platform used to transport animals.
  - b. The name of the transportation company, if applicable, and the qualifications of the common carrier to transport live animals: If a contractor or other entity will do the transportation, enter information in the box. Otherwise, click on N/A.
  - c. **Maximum length of time from capture to arrival at destination:** How long will the animals be in transport?
  - d. **Description of the container (e.g., cage, tank) used to hold the animal during transit:** Include the material and design of the container and its dimensions.
  - e. **Any special care procedures (e.g., moisture, medicines) to be administered during transport:** How will the animals be cared for during transport?
  - f. A statement as to whether the animals will be accompanied by a veterinarian or some similarly qualified person: If so, give the name, affiliation, contact information for each person.
  - g. **Destination:** Use the drop down list to select the destination. If your destination is not on the list, click on the "New Facility" button to add it. If the animals will be taken to a laboratory or aquarium, provide details of the location. If the animals will be released in another waterbody, provide details of the location.
  - h. **How will the animals be contained at the destination facility?** Describe the containment system for the animals, quarantine procedures, and effluent treatment.
  - i. **The final disposition of the animals:** Describe, for example, whether the animal will be released into the wild or retained in permanent captivity.
- 12. **Begin Date**: Populated with the Begin Date you entered on the Project Information page. You may change the date to coincide with a specific project time shorter than

- the overall duration of the permit. You cannot enter a date that is earlier than your original Begin Date.
- 13. **End Date**: Populated with the End Date you entered on the Project Information page. You may change the date to coincide with a specific project time shorter than the overall duration of the permit. You cannot enter a date that is later than the End Date you previously entered.
- 14. **Details**: Enter up to 255 characters to provide details on each take table row. This is especially useful to clarify age class, takes, intentional repeated takes, specific activities, or projects.

#### \*Anticipated Effects on the Environment

1. Will you be working in or near areas with **unique environmental characteristics or important scientific, cultural, or historical resources**? Yes or no.

#### Examples include:

- Animals used for subsistence
- Archaeological resources
- Critical Habitat of ESA-listed species
- Essential Fish Habitat including wetlands, coral reefs, sea grasses, and rivers
- Federally recognized Tribal and Native Alaskan lands, cultural or natural resources, or religious or cultural sites
- Marine Protected Areas
- Minority or low-income communities
- National or State Parks
- National Marine Sanctuaries and National Monuments
- National Historic Landmarks
- Sites listed in or eligible for listing in the <u>National Register of Historic Places</u>
- Wild and Scenic Rivers
- Wilderness Areas
- Wildlife Refuges
- a. If yes, please list those areas. As applicable, mention if you will need to or have already obtained permission (licenses, permits, authorizations) to work in these areas. (up to 1,200 characters)

- b. How would your activities affect such resources? What measures will you take to ensure your work does not cause loss or destruction of such resources? (up to 1,200 characters)
- c. For marine mammal activities in Alaska or Washington, how will you ensure your project does not adversely affect the availability (e.g., distribution, abundance) or suitability (e.g., food safety) of marine mammals for subsistence uses? (up to 800 characters) **Enter Not Applicable.**
- 2. Discuss if your activities have the **potential to impact the physical or biological environment**, in particular coastal and marine environments. Impacts can be positive or negative. (up to 2,000 characters)

Examples of potential impacts include:

- Altering substrate while anchoring vessels and buoys
- Using bottom trawls or other types of nets
- Erecting structures
- Ingress and egress of researchers
- Injuring or killing benthic organisms (e.g., seagrass, corals)
- Altering the physical or chemical characteristics of water (e.g., oil spills)
- Affecting a species' abundance or distribution

#### 3. Invasive Species

- a. Does your project involve activities known or suspected of **introducing or spreading invasive species**, intentionally or not? Examples include transporting animals or other biological specimens, discharging ballast water, and using boats/equipment at multiple sites. Yes or no.
- b. Describe measures you would take to prevent the possible introduction or spread of non-indigenous or invasive species, including plants, animals, microbes, or other biological agents. (up to 1,200 characters)

#### 4. Biological Specimens

- a. Will your activities involve collecting, handling, or transporting **potentially infectious agents or pathogens, such as biological specimens** (animals, blood, tissues)? Yes or no.
- b. Will your activities involve using or transporting **hazardous substances**, such as toxic chemicals? Yes or no.

- c. If yes to either question, describe the protocols you will use to ensure that public health and human safety are not adversely affected, such as by spread of zoonotic diseases, chemical injuries, or contamination of food or water supplies. (up to 1,200 characters)
- 5. Do your activities involve equipment (e.g., scientific instruments) or techniques that are **new**, **untested**, **or have unknown or uncertain impacts** on the biological or physical environment? Yes or no.

#### If yes:

- a. Briefly describe the equipment or techniques and provide any information about the use of these in your study area and/or with other taxa and what is known about their impacts. (up to 1,200 characters)
- b. Discuss the degree to which they are likely to be adopted by others for similar activities or applied more broadly. (up to 800 characters)

#### **Project Contacts**

The person entering the application in APPS will automatically be assigned the following roles: **Applicant/Permit Holder, Principal Investigator (PI),** and **Primary Contact**.

- 1. You may need to change or add personnel. See <u>Chapter 2</u> for directions on how to change who is assigned to these roles.
- 2. Use the guidance below to help you decide who should have what role.
- 3. To prevent duplicate entries, **ALWAYS search APPS for the person before entering a new contact.** Start with the last name in the APPS search box.
- 4. **Include a table** with the names of the PI and Co-Investigators (CIs), and the specific procedures they will oversee or conduct (see example Table 3). **Attach the table on the** Supplemental Information page.
- 5. As you add personnel, **check whether each person already has a Qualifications Form (QF) in APPS.** It will appear next to their name once you add them to your
  Contacts page. If there is not a QF in APPS, then attach one for the PI and each CI.
  See <u>Qualifications and Experience</u> below.

#### **Descriptions of Personnel Roles**

A project must have a **Responsible Party if the Applicant/Permit Holder is an organization, institution, or agency**. The Responsible Party or Applicant/Permit Holder

is an official who has the legal authority to bind the organization, institution, or agency and is ultimately responsible for the activities of any individual operating under the authority of the permit.

The **Principal Investigator** (PI) is the individual primarily responsible for the take, import, export, and any related activities conducted under the permit. There can only be one PI on a permit. The PI:

- Must have qualifications, knowledge, and experience relevant to the activities authorized by the permit.
- Must be on site during activities conducted under the permit unless a Co-Investigator is present to act in place of the PI.
- May also be the Applicant/Permit Holder and Primary Contact.

The **Primary Contact** is the person primarily responsible for correspondence during the application review process and after a permit is issued. Typically this person administers the permit, requests modifications (e.g., personnel changes), and submits reports. The Primary Contact may also serve other roles on the permit (e.g., Applicant/Permit Holder, PI, CI).

The Applicant/Permit Holder or Responsible Party, PI, and Primary Contact will have access to APPS to enter and edit the application, submit reports and modification requests, and will receive automatic emails from APPS.

**Co-Investigators** (CIs) are individuals who are qualified and authorized to conduct or directly supervise activities conducted under a permit without the on-site supervision of the PI.

- You must add CIs to the application if the PI will not always be present during the permitted activities.
- CIs can also be added or removed once a permit has been issued.

**Research Assistants** (RAs) are individuals who work under the direct and on-site supervision of the PI or a CI. RAs cannot conduct permitted activities in the absence of the PI or a CI. RAs do not need to be named in the application or permit.

A **Veterinarian (for sea turtles only)** who is licensed to practice on sea turtles must be identified for each sea turtle permit application. A veterinarian must be named: 1) for emergencies in an on-call capacity, and 2) to directly perform or supervise certain

methods, including surgery and drug administration. More than one veterinarian may be listed to fulfill these roles.

**Unmanned Aircraft Systems (UAS) Pilots** are persons who have their FAA-certification to fly unmanned aircraft systems and experience piloting UAS. A CI or the PI with taxa specific (e.g., sea turtles) experience may be qualified to serve in this role. In other cases, you may designate someone as a UAS Pilot who is tasked with only that role and does not have taxa specific experience.

#### Personnel for Unmanned Aircraft Systems (UAS)

To fly UAS, you must have: 1) someone with experience working with the target species in the wild, and 2) someone who is FAA-certified to conduct or oversee UAS flights with approximately 5 hours of flight experience. These may be satisfied by one or more persons, depending on the qualifications of your team. The following scenarios describe the personnel roles for UAS that you may request based on their qualifications.

Table 2. UAS Personnel

Scenario 1: Species expert who is also an FAA-certified UAS pilot

If the person has:	They may be named as:
Experience working with the subject	PI or CI to supervise and operate UAS.
species/taxa in the wild and UAS	No separate UAS Pilot required to be named
experience with an FAA UAS certification	on the application.

Scenario 2: Species expert (PI or CI) accompanied by an FAA-certified UAS pilot

If the person has:	They may be named as:	
Experience working with the subject species/taxa in the wild, but no UAS	<b>PI or CI to supervise UAS</b> . A separate UAS Pilot must be named for the UAS operation.	
experience	Thot must be named for the 6715 operation.	
UAS experience and FAA UAS certification but no taxa specific experience	UAS pilot to operate the UAS or directly oversee operation as the remote pilot in command. The UAS pilot must be supervised by the PI or a CI with taxa specific experience.	
Note: Other personnel who are not FAA-certified may manually operate the UAS (e.g., for		

Note: Other personnel who are not FAA-certified may manually operate the UAS (e.g., for training purposes) provided the FAA certified pilot designated on the permit directly oversees the UAS operation.

#### **Qualifications and Experience**

**The PI and each CI must complete a Qualifications Form (QF).** Previously we accepted CVs, resumes, and biosketches, but often these did not include sufficient information about

the person's field experience to demonstrate they were qualified in the proposed take activities. You can download a blank QF from the Contacts page in APPS or from any of our permitting web pages.

Once you fill out a QF and attach it to your profile in APPS, you won't have to do it again, unless your skills or experience change. Each contact should only have **1 QF file** in their profile; it will apply to all permits they are affiliated with. They may **replace** the QF with an updated version as they gain new experience.

**Persons authorized as the PI or CIs must have qualifications corresponding to their duties.** Note, if the PI or a CI will be supervising but not performing specific procedures, they must demonstrate sufficient cumulative experience to oversee the project, personnel (e.g., other CIs, research assistants, veterinarians), and procedures.

If you do not provide sufficient information, we will not authorize the person(s).

In addition, **you must submit a table (see Table 3) defining the PI and CI roles** and activities (i.e., supervising or conducting specific procedures) to be performed. Attach this table on the <u>Supplemental Information</u> screen

Table 3. Example Personnel Roles

Name/Affiliation	Role	Activities
John Smith, Ph.D.,	Principal Investigator	Supervise and perform all
University A, City,		activities under the permit
State		
Jane Smith,	Co-Investigator	Conduct all activities excluding
Institution B, City,		UAS and anesthesia during
State		captures
Jane Doe, D.V.M.,	Co-Investigator and	Oversee and conduct captures,
Institution C, City,	Attending Veterinarian	and anesthesia of sea turtles
State		
Jane Doe, Ph.D.,	Co-Investigator	Oversee and conduct captures,
Institution C, City,		anesthesia, and surgical
State		implantation of sonic tags in
		fishes
John Doe, Ph.D.,	Co-investigator	Collect skin biopsy samples and
University D, City,		create cell lines
State		
Bob Jones, City,	UAS pilot	UAS pilot supervised by the PI
State		or a CI

## **Submit Application**

See <u>Chapter 2</u> for how to submit your application in APPS and check on its status.

# **Additional Information**

## What is this application <u>not</u> for?

Research or enhancement activities on:

- Sea turtles on land or in rehabilitation
- Marine mammals
- Pacific marine and anadromous fish (e.g., steelhead, eulachon, salmon)
- Protected species parts (only involving importing, exporting, or receiving parts)

## When should you apply?

For projects within the scope of existing <u>programmatic consultations</u>, the following timelines apply.

Species	Application Due	Decision (Issue or Deny)
Atlantic and shortnose sturgeon	August 1	January 31
Sea turtles	April 1	September 30
Smalltooth sawfish	August 1	January 31

If your project falls outside the scope of a programmatic consultation, submit your application 1 year in advance of the proposed research.

# What is the process for getting a permit?

- 1. Follow these instructions and contact the Permits and Conservation Division at <a href="mailto:nmfs.pr1.apps@noaa.gov">nmfs.pr1.apps@noaa.gov</a> or 301-427-8401 with any questions.
- 2. Submit your application via APPS.
  - a. A permit analyst will review your application and contact you if additional information is needed.
- 3. Address any questions within 60 days or your application will be withdrawn.
  - a. Once we consider your application complete, we will publish a notice in the <u>Federal Register</u>, which starts a mandatory 30-day public comment period.
  - b. Concurrently, we will send your application to subject matter experts in partner institutions and federal and state agencies for review.
  - c. We will determine whether or not your proposed research requires an ESA Section 7 consultation. Your research may fall under a <u>programmatic</u>

<u>consultation</u>. If it does not follow under a programmatic, we will need to request consultation to assess impacts to ESA-listed species. The ESA consultation can take up to 6 months.

- 4. Address any questions received during the comment period.
  - a. We will draft the permit and supporting documentation (including National Environmental Policy Act analyses, responses to public comments, and documentation of ESA issuance criteria).
  - b. The documents will be reviewed by various NMFS offices including a legal review.
  - c. For individual consultations, a Biological Opinion will be issued if ESA-listed species may be taken and adversely affected to determine if the activity will jeopardize the species or adversely modify critical habitat.
  - d. The Office Director will decide whether to issue or deny your permit.

## What is the process for requesting a modification to a permit?

If your permit falls under a programmatic consultation, you may need to submit your modification request as part of the application cycle. See our <u>programmatic permitting</u> web page for information on when to submit different types of modification requests.

Use <u>APPS</u> to submit your modification request. You'll need to provide a description of your proposed changes and include all the necessary details for those changes, as applicable. Use these application instructions as a guide. For example, changes to your objectives will require that you discuss all the points in the Project Purpose section. Additions to personnel require Qualifications Forms and descriptions of their roles.

# **Applicable Laws and Regulations**

Under ESA Section 10(a)(1)(A) of the <u>ESA</u>, persons may be authorized to take threatened and endangered species for purposes of scientific purposes or enhancing the survival or propagation of the species. Interested persons are required to submit an application in accordance with the ESA and the implementing regulations at 50 CFR Part 222. These instructions for applying for a research or enhancement permit are drawn from, but do not substitute for, <u>ESA regulations</u>. Under <u>NEPA</u>, Federal agencies must assess the effects of federal actions on the environment. Under Section 7 of the ESA, Federal agencies must ensure that the permitted activities will not jeopardize the continued existence of listed species or result in adverse modification of critical habitat.

All permit documentation, including the application, permit and modifications, reports, inventory information, and any other associated documents are considered public information and as such, are subject to the <u>Freedom of Information Act</u>.

# Paperwork Reduction Act Statement

A Federal agency may not conduct or sponsor, and a person is not required to respond to, nor shall a person be subject to a penalty for failure to comply with an information collection subject to the requirements of the Paperwork Reduction Act of 1995 unless the information collection has a currently valid OMB Control Number. The approved OMB Control Number for this information collection is 0648-0084. Without this approval, we could not conduct this information collection. Public reporting for this information collection is estimated to be approximately 50 hours per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the information collection. All responses to this information collection are required to obtain a permit pursuant to the ESA, NEPA, and their implementing regulations. Send comments regarding this burden estimate or any other aspect of this information collection, including suggestions for reducing this burden to the Chief, Permits and Conservation Division, Office of Protected Resources, F/PR1, NOAA/National Marine Fisheries Service, 1315 East-West Highway, Silver Spring, MD 20910; email <a href="mailto:nmfs.pr1.apps@noaa.gov">nmfs.pr1.apps@noaa.gov</a>.
