
How To Obtain a Covered Product Authorization

Guidance for Industry

DRAFT GUIDANCE

This guidance document is being distributed for comment purposes only.

Comments and suggestions regarding this draft document should be submitted within 60 days of publication in the *Federal Register* of the notice announcing the availability of the draft guidance. Submit electronic comments to <https://www.regulations.gov>. Submit written comments to the Dockets Management Staff (HFA-305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852. All comments should be identified with the docket number listed in the notice of availability that publishes in the *Federal Register*.

For questions regarding this draft document, contact CPAGuidance@fda.hhs.gov.

Draft — Not for Implementation

**How to Obtain a Covered Product Authorization
Guidance for Industry¹**

This draft guidance, when finalized, will represent the current thinking of the Food and Drug Administration (FDA or Agency) on this topic. It does not establish any rights for any person and is not binding on FDA or the public. You can use an alternative approach if it satisfies the requirements of the applicable statutes and regulations. To discuss an alternative approach, contact the FDA staff responsible for this guidance as listed on the title page.

I. INTRODUCTION

This guidance describes how eligible product developers can obtain a Covered Product Authorization (CPA) from FDA under the law widely known as the CREATES Act (referred to herein as CREATES or the CREATES Act). The CREATES Act provides a pathway for eligible product developers to obtain access to the product samples they need to fulfill testing and other regulatory requirements to support their applications. As described in further detail below, to make use of this pathway, an eligible product developer seeking to develop a product subject to a Risk Evaluation and Mitigation Strategies (REMS) with elements to assure safe use (ETASU) must obtain from the Agency a Covered Product Authorization (see 21 U.S.C. 355-2(b)(2)). This guidance replaces the December 2014 draft guidance for industry *How to Obtain a Letter from FDA Stating that Bioequivalence Study Protocols Contain Safety Protections Comparable to Applicable REMS for RLD*. The December 2014 guidance has been withdrawn.

The contents of this document do not have the force and effect of law and are not meant to bind the public in any way, unless specifically incorporated into a contract. This document is intended only to provide clarity to the public regarding existing requirements under the law. FDA guidance documents, including this guidance, should be viewed only as recommendations, unless specific regulatory or statutory requirements are cited. The use of the word *should* in Agency guidance means that something is suggested or recommended, but not required.

II. BACKGROUND

In December of 2019, the CREATES Act was enacted as part of the Further Consolidated Appropriations Act of 2020.² As noted above, CREATES makes available a pathway for

¹ This guidance has been prepared by the Office of Regulatory Policy, the Office of Generic Drugs, and the Office of New Drugs in the Center for Drug Evaluation and Research at the Food and Drug Administration.

² See P.L. 116-94 (*Further Consolidated Appropriations Act, 2020*, enacting Division N, Title I, Subtitle F, Section 610—Actions for Delays of Generic Drugs and Biosimilar Biological Products (Dec. 20, 2019)). The provisions of this law related to access to product samples were codified at 21 U.S.C. 355-2 and 355-1(l).

Contains Nonbinding Recommendations

Draft — Not for Implementation

36 developers of potential drug and biological products to obtain samples³ of brand products⁴ that
37 they need to support their applications. CREATES establishes a private right of action that
38 allows eligible product developers⁵ to sue brand companies that refuse to sell them product
39 samples needed to support their applications. If the product developer prevails, the court will
40 order the sale of samples, will award attorneys' fees and litigation costs to the product developer,
41 and may impose a monetary penalty on the brand company.

42 If a product developer is not able to obtain samples of the brand product that they need to support
43 their application from the brand company on a voluntary basis and seeks to use the pathway
44 made available by CREATES, they must take a number of specific steps (outlined in the law)
45 before the brand company will be required to sell them product samples under CREATES. One
46 of these steps – if the brand product for which samples are sought is subject to a Risk Evaluation
47 and Mitigation Strategy (REMS) with elements to assure safe use (ETASU)⁶ – is that the product
48 developer must first obtain a Covered Product Authorization (CPA) from FDA (21 U.S.C. 355-
49 2(b)(2)).⁷ CREATES does not require this step for products that are not subject to REMS with
50 ETASU. This guidance describes how an eligible product developer can obtain a CPA from
51 FDA.

52

53

A. Relevant Product Types

54

55

1. Generic Drug Products

56

57 The Drug Price Competition and Patent Term Restoration Act of 1984 (the Hatch-Waxman
58 Amendments) created section 505(j) of the Federal Food, Drug, and Cosmetic Act (FD&C Act)
59 (21 U.S.C. 355(j)), which established the current abbreviated new drug application (ANDA)
60 approval process for generic drugs. To obtain approval to market a generic drug, an ANDA
61 applicant is not required to submit clinical studies to establish the safety and effectiveness of the
62 proposed generic drug product, but instead may rely on the Agency's previous finding of safety
63 and effectiveness for the reference listed drug (RLD). To do so, an ANDA applicant generally

³ As used in this guidance, the terms "samples" and "product samples" refer to an amount of a "covered product" as defined by 21 U.S.C. 355-2(a)(2) that the eligible product developer determines allows it to conduct testing to support certain types of applications and fulfill any regulatory requirements relating to approval of such applications.

⁴ As used in this guidance, the term "brand product" refers to the statutory term "covered product" as defined by U.S.C. 355-2(a)(2), which include drugs approved under section 505(c) or (j) of the Federal Food, Drug and Cosmetic Act or biological products licensed under section 351(a) or (k) of the Public Health Service Act. In addition, the term "brand company," as used in this guidance, refers to the statutory term "license holder," as defined by 21 USC 355-2(a)(5).

⁵ See definitions in section III.A. Note that this guidance also refers to eligible product developers as product developers.

⁶ FDA's online listing of approved REMS is available at <https://www.accessdata.fda.gov/scripts/cder/remis/index.cfm>. Product developers should check this listing to confirm that the product for which they seek a CPA is covered by a REMS with ETASU before submitting a CPA request.

⁷ Note that requesting or obtaining a CPA from FDA is not a legal requirement to obtain samples of a covered product, and the process described in this guidance is voluntary and applies only to those who seek to avail themselves of the CREATES pathway to obtain such samples. CREATES also provides a pathway for obtaining samples of covered products that are not subject to REMS with ETASU. 21 U.S.C. 355-2.

Contains Nonbinding Recommendations

Draft — Not for Implementation

64 must demonstrate, among other things, that the proposed generic drug product (1) has the same
65 active ingredient(s), dosage form, route of administration, strength, conditions of use, and (with
66 certain exceptions) labeling as the reference listed drug (RLD), and (2) is bioequivalent to the
67 RLD (see section 505(j)(2)(A) of the FD&C Act). Bioequivalence is generally demonstrated via
68 studies in which the proposed generic product is compared to the RLD.
69

2. 505(b)(2) Products

70
71
72 Section 505(b)(2) of the FD&C Act represents another abbreviated approval pathway added by
73 the Hatch-Waxman Amendments. As background, a “stand-alone new drug application (NDA)”
74 submitted under section 505(b)(1) contains full reports of investigations of safety and
75 effectiveness that were conducted by or for the applicant or for which the applicant has a right of
76 reference or use (see 21 U.S.C. 355(b)(1), (c)). A “505(b)(2) application,” meanwhile, is an
77 NDA that also contains full reports of investigations of safety and effectiveness, but for which
78 one or more of the investigations relied upon by the applicant for approval “were not conducted
79 by or for the applicant and for which the applicant has not obtained a right of reference or use
80 from the person by or for whom the investigations were conducted” (21 U.S.C. 355(b)(2)). A
81 505(b)(2) application may be submitted to seek approval for, among other things, a new
82 chemical entity, or for a change to an approved drug that would not be permitted under section
83 505(j). A 505(b)(2) application should include, among other things, an identification of those
84 portions of the application that rely on information the applicant does not own or to which the
85 applicant does not have a right of reference. If the 505(b)(2) seeks to rely on the Agency’s
86 previous finding of safety or efficacy for a listed drug, or on literature derived from studies of a
87 listed drug or drugs, a 505(b)(2) application should also include, among other things, a
88 bioavailability/bioequivalence study comparing the proposed product to the listed drug or drugs
89 and studies necessary to support any change or modification from the listed drug or drugs, if any.
90

3. Biosimilar Products

91
92
93 The Biologics Price Competition and Innovation Act of 2009 (BPCI Act) amended the Public
94 Health Service Act (PHS Act) to create an abbreviated licensure pathway for biological products
95 shown to be biosimilar to, or interchangeable with, an FDA-licensed biological reference product
96 (see sections 7001 through 7003 of the Patient Protection and Affordable Care Act (Public Law
97 111–148)). Section 351(k) of the PHS Act (42 U.S.C. 262(k)), added by the BPCI Act, sets forth
98 the requirements for the licensure of a proposed biosimilar or a proposed interchangeable
99 biosimilar. An application submitted under section 351(k) must contain, among other things,
100 information demonstrating that the biological product is biosimilar to a reference product⁸ based
101 upon data derived from analytical studies, animal studies, and a clinical study or studies (see
102 section 351(k)(2)(A)(i)(I) of the PHS Act). FDA has the discretion to determine that an element
103 is unnecessary in a 351(k) application. In addition, FDA expects that applications for
104 interchangeable biosimilars generally will include data from a “switching study” or studies,
105 meaning a clinical study or studies used to determine the impact of alternating or switching

⁸ Under section 351(i)(4) of the PHS Act, the term “reference product” means the single biological product licensed under section 351(a) of that Act, against which a biological product is evaluated in a 351(k) application.

Contains Nonbinding Recommendations

Draft — Not for Implementation

106 between the proposed interchangeable product and the reference product, in one or more
107 appropriate conditions of use.⁹

108

B. Need for Brand Product Samples to Support Product Applications

109

110
111 To conduct the studies and testing described above to support their applications, ANDA,
112 505(b)(2) and biosimilar product applicants typically need access to some amount of the brand
113 product. Other testing (such as that necessary to establish the appropriate dissolution
114 specifications for a proposed product) and/or regulatory requirements (such as those relating to
115 the retention of reserve samples) may require an applicant to obtain additional supplies of the
116 brand product to support their applications. The amount of product needed will depend on,
117 among other things, the scientific requirements of such studies and testing, including, where
118 appropriate, the number of lots necessary to provide adequate information regarding brand
119 product variability, and on applicable regulatory requirements.

120 Often, product developers are able to obtain these product samples needed to support their
121 application through normal distribution channels (e.g., via wholesalers). Sometimes, however,
122 samples of the brand product are not available through normal distribution channels. A product
123 may not be available through standard distribution channels because the brand company limits its
124 distribution (for example, by selling it through a central or small group of pharmacies) on its own
125 initiative. In other cases, a Risk Evaluation and Mitigation Strategy (REMS) with elements to
126 assure safe use (ETASU) might impact the way the product is distributed.

127 A REMS is a required risk management plan that uses tools beyond the prescribing information
128 to ensure that the benefits of a drug outweigh its risks (section 505-1 of the FD&C Act). FDA
129 may require a REMS with ETASU when such elements are necessary to mitigate specific serious
130 risks associated with a particular drug (section 505-1(f) of the FD&C Act). ETASU may
131 include, for example, requirements that health care providers who prescribe or administer the
132 drug have particular training or are specially certified, that patients using the drug be monitored
133 and/or enrolled in a registry, that pharmacies, practitioners, or health care settings that dispense
134 the drug be specially certified, that the drug be dispensed to patients with evidence or other
135 documentation of safe use conditions, or that the drug be dispensed to patients only in certain
136 health care settings. A REMS with ETASU might impact the way a product is distributed if, for
137 example, only a limited number of pharmacies are willing and/or able to meet the specific
138 pharmacy certification requirements in a REMS.

139 Once such distribution limitations are in place (whether they are voluntarily imposed or related
140 to REMS requirements) FDA understands that some product developers have encountered
141 difficulty obtaining product samples from brand companies because brand companies have (1)
142 refused to sell the product directly to developers (or imposed terms on the sale that developers
143 found burdensome or impossible to comply with), or (2) placed limitations on the ability of
144 pharmacies or wholesalers to sell samples to the companies for development purposes. As a

⁹ See guidance for industry, *Considerations in Demonstrating Interchangeability With a Reference Product* (May 2019). We update guidances periodically. For the most recent version of a guidance, check the FDA guidance web page at <https://www.fda.gov/regulatory-information/search-fdaguidance-documents>.

Contains Nonbinding Recommendations

Draft — Not for Implementation

145 result, protracted and/or unsuccessful efforts to obtain brand product samples slowed, prevented,
146 or deterred development of competing versions of these products.

147
148 **III. PASSAGE OF THE CREATES ACT**

149 In December of 2019, CREATES was enacted to address these issues by providing a pathway for
150 developers of ANDA, 505(b)(2), and biosimilar products to obtain needed product samples to
151 support their applications. CREATES established a private right of action that allows an eligible
152 product developer to bring suit in an appropriate U.S. district court alleging that the license
153 holder (i.e., the brand company) has declined to provide them with sufficient quantities of the
154 covered product on commercially reasonable, market-based terms.

155 **A. Key Terms in CREATES**

156 The law defines the terms used above as follows:¹⁰

157 **Eligible product developer:**

158 “a person that seeks to develop a product for approval pursuant to an application for
159 approval under subsection (b)(2) or (j) of section 505 of the Federal Food, Drug, and
160 Cosmetic Act (21 U.S.C. 355) or for licensing pursuant to an application under section
161 351(k) of the Public Health Service Act (42 U.S.C. 262(k))”

162
163 **License holder:**

164 “the holder of an application approved under subsection (c) or (j) of section 505 of the
165 Federal Food, Drug, and Cosmetic Act (21 U.S.C. 355) or the holder of a license under
166 subsection (a) or (k) of section 351 of the Public Health Service Act (42 U.S.C. 262) for a
167 covered product”

168
169 **Sufficient quantities:**

170 “an amount of a covered product that the eligible product developer determines allows it
171 to— (A) conduct testing to support an application under— (i) subsection (b)(2) or (j) of
172 section 505 of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 355); or (ii) section
173 351(k) of the Public Health Service Act (42 U.S.C. 262(k)); and (B) fulfill any regulatory
174 requirements relating to approval of such an application”

175
176 **Covered product:**

177 “(i) any drug approved under subsection (c) or (j) of section 505 of the Federal Food,
178 Drug, and Cosmetic Act (21 U.S.C. 355) or biological product licensed under subsection
179 (a) or (k) of section 351 of the Public Health Service Act (42 U.S.C. 262);
180 (ii) any combination of a drug or biological product described in clause (i); or
181 (iii) when reasonably necessary to support approval of an application under section 505
182 of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 355), or section 351 of the
183 Public Health Service Act (42 U.S.C. 262), as applicable, or otherwise meet the

¹⁰ 21 U.S.C. 355-2(a).

Contains Nonbinding Recommendations

Draft — Not for Implementation

184 requirements for approval under either such section, any product, including any device,
185 that is marketed or intended for use with such a drug or biological product.”

186

187 The term covered product “does not include any drug or biological product that appears
188 on the drug shortage list in effect under section 506E of the Federal Food, Drug, and
189 Cosmetic Act (21 U.S.C. 356e), unless—

190 (i) the drug or biological product has been on the drug shortage list in effect under
191 such section 506E continuously for more than 6 months; or

192 (ii) the Secretary determines that inclusion of the drug or biological product as a
193 covered product is likely to contribute to alleviating or preventing a shortage.”

194 Commercially reasonable, market-based terms:

195 “(A) a nondiscriminatory price for the sale of the covered product at or below, but not
196 greater than, the most recent wholesale acquisition cost for the drug, as defined in section
197 1847A(c)(6)(B) of the Social Security Act (42 U.S.C. 1395w–3a(c)(6)(B));

198 (B) a schedule for delivery that results in the transfer of the covered product to the
199 eligible product developer consistent with the timing under [subsection (b)(2)(A)(iv) of
200 CREATES]; and

201 (C) no additional conditions are imposed on the sale of the covered product”

202

203 B. Covered Product Authorizations Under CREATES

204

205 To prevail in the private right of action established by CREATES, the eligible product developer
206 must prove that it has taken a number of specific steps. It must show, among other things, that it
207 submitted a written request to the license holder to purchase sufficient quantities of the covered
208 product, and that the request (1) was sent to a named corporate officer of the license holder, (2)
209 was made by certified/registered mail with return receipt requested, (3) specified an individual
210 point of contact and a means for written and electronic communication with them, and (4)
211 provided a delivery address for samples.¹¹ The eligible product developer must also prove that
212 the license holder did not deliver sufficient quantities of the covered product on commercially
213 reasonable, market-based terms within 31 days of receiving the request (for non-REMS ETASU
214 products) or (for REMS ETASU products) within 31 days of receiving either the request OR a
215 copy of the Covered Product Authorization (CPA), whichever is later.¹²

216

217 The CPA is a document obtained by the eligible product developer from FDA.

218 CREATES provides that “[a]n eligible product developer may submit to [FDA] a written
219 request for the eligible product developer to be authorized to obtain sufficient quantities
220 of an individual covered product subject to a REMS with ETASU.”¹³ The law requires
221 that FDA must respond to this request within 120 days.¹⁴

222

¹¹ 21 U.S.C. 355-2(b)(2)(A)(iii).

¹² 21 U.S.C. 355-2(b)(2)(A)(iv).

¹³ 21 U.S.C. 355-2(b)(2)(B).

¹⁴ *Id.*

Contains Nonbinding Recommendations

Draft — Not for Implementation

223 CPAs are only available for products that are subject to a REMS with ETASU. To prevail in the
224 private right of action established by CREATES, an eligible product developer seeking samples
225 of a product that is *not* subject to a REMS with ETASU does not need to obtain a CPA.
226

227 In addition, the CPA established by CREATES replaces the “Safety Determination Letter” that
228 FDA had been issuing prior to CREATES as described in the withdrawn draft guidance for
229 industry *How to Obtain a Letter from FDA Stating that Bioequivalence Study Protocols Contain*
230 *Safety Protections Comparable to Applicable REMS for RLD*. The purpose of the Safety
231 Determination Letter was to provide RLD sponsors with written assurance that providing
232 samples to a potential applicant would not be considered a violation of their REMS. The CPA
233 provides the same written assurance. Note that unlike Safety Determination Letters, which FDA
234 sent to the RLD sponsor at the prospective ANDA applicant’s request, CREATES provides that
235 the eligible product developer is responsible for providing a copy of the CPA to the applicable
236 license holder.¹⁵
237

IV. HOW TO OBTAIN A COVERED PRODUCT AUTHORIZATION FROM FDA

238
239 We recommend that interested developers seeking CPAs submit their requests as follows:
240

- 241
242 • For generic products, submit the request as a controlled correspondence to the CDER
243 NextGen Collaboration Portal¹⁶ (general questions may be submitted
244 to GenericDrugs@fda.hhs.gov).
- 245
246 • For 505(b)(2) products and biological products, submit the request to your pIND file
247 or IND (with a copy to the related marketing application, if there is one). If you do
248 not have a pIND or IND number, request a file number as described at
249 [https://www.fda.gov/drugs/electronic-regulatory-submission-and-review/requesting-](https://www.fda.gov/drugs/electronic-regulatory-submission-and-review/requesting-pre-assigned-application-number)
250 [pre-assigned-application-number](https://www.fda.gov/drugs/electronic-regulatory-submission-and-review/requesting-pre-assigned-application-number) and submit the request to that numbered file. Please
also email a copy of your CPA request to ONDCcommunications@fda.hhs.gov.
251

A. Contents of a CPA Request

- 252
253 • Please prominently identify the request as a “REQUEST FOR COVERED
254 PRODUCT AUTHORIZATION.” Requests should specify that the product
255 developer is seeking a CPA and the product for which a CPA is being sought.
256
- 257
258 • If the samples will be used for purposes of development and testing that involve
259 human clinical trials, requests should be accompanied by study protocols, informed
260 consent documents, and informational materials for testing demonstrating that safety
261 protections comparable to those in the REMS for the brand product will be provided
for in the study or studies for which samples are sought.
- 262
263 • If the samples will be used for purposes of development and testing that does not
involve any testing in humans, the request should state that the samples will not be

¹⁵ 21 U.S.C. 355-2(b)(2)(A)(i).

¹⁶ For more information, see guidance for industry, [Controlled Correspondence Related to Generic Drug Development](#) (Dec. 2020).

Contains Nonbinding Recommendations

Draft — Not for Implementation

264 used for testing in humans. If you receive a CPA for development and testing that
265 does not involve testing in humans and your development plan subsequently changes
266 such that product samples are needed for human clinical trials, you should obtain a
267 new CPA for these purposes.¹⁷

268 • If you seek a CPA for a product that is on the drug shortage list in effect under section
269 506E of the Federal Food, Drug & Cosmetic Act (“in shortage”), please specify in
270 your request that the product is on the drug shortage list.¹⁸

271 CREATES does not impose limitations on the number of times an eligible product developer
272 may request samples pursuant to a particular CPA or on the number of requests an eligible
273 product developer may make for product samples to support their application.

274 B. FDA Review

275
276 • The Agency will review any draft protocol(s), informed consent document(s), and
277 informational materials submitted. As the Agency processes your request for a CPA, we
278 may ask for additional information via an information request.

279 • If the Agency determines that the protocols, informed consent documents, and
280 informational materials for testing contain safety protections comparable to those
281 provided by the applicable REMS with ETASU, FDA will issue a CPA letter within 120
282 days of the date of submission.¹⁹

283 • If the drug is in shortage, FDA will determine whether (1) it has been in shortage
284 continuously for more than six months, or (2) its inclusion as a covered product is likely
285 to contribute to alleviating or preventing a shortage. If the answer to either is yes, the
286 Agency will issue a CPA to the requester, assuming the requester has met the remaining
287 requirements for obtaining a CPA. If not, the drug would not be considered a covered
288 product under CREATES, and the CPA request will be rejected.²⁰ If a CPA request is
289 rejected on this basis, FDA recommends that the eligible product developer continue to
290 monitor FDA’s drug shortage list and consider submitting a new CPA after the product is
291 either no longer in shortage or has been in shortage continuously for more than six
292 months.

293 • If FDA cannot determine from the protocols, informed consent documents, and
294 informational materials for testing submitted with your CPA request that safety
295 protections comparable to those provided by the applicable REMS with ETASU will be
296 provided, and the deficiencies in the materials submitted are more significant than can be
297 resolved via an information request, your CPA request will be rejected and the reasons
298 for rejection specified in the response. The Agency intends to process any resubmission
299 on a new 120-day clock.

300
