

To complete Methodological Testing in FY 2024 before renewing this generic clearance, we request that an increase to the Burden Hours for the Methodological Testing (MT) Generic Clearance (2700-0159) by 605 burden hours to:

- 1) conduct testing of several additional modifications to the K-12 STEM Inventory (K-12 Student Outcome Assessment Suite of Surveys) which is estimated to be 466.67 Burden Hours; and
- 2) provide an additional 166.67 burden hours for testing of any potential new instrument(s) to support evaluation and assessment interests of NASA STEM Engagement Investments and Stakeholders.

With this increase we'll be able to complete our current planned testing activities and support any potential new requests through the end of the FY 2024.
