

**SUPPORTING STATEMENT FOR
VETERANS SUPPLEMENT TO THE CURRENT POPULATION SURVEY**

OMB CONTROL NO. 1220-0102

1. Describe (including a numerical estimate) the potential respondent universe and any sampling or other respondent selection methods to be used. Data on the number of entities (e.g., establishments, State and local government units, households, or persons) in the universe covered by the collection and in the corresponding sample are to be provided in tabular form for the universe as a whole and for each of the strata in the proposed sample. Indicate expected response rates for the collection as a whole. If the collection had been conducted previously, include the actual response rate achieved during the last collection.

The annual supplement will be conducted one month each year in conjunction with the CPS, for which the universe is 128 million households. From this universe, the Census Bureau selects a sample of approximately 70,000 households each month, of which approximately 60,000 households are eligible for interviews. The Census Bureau actually interviews about 42,000 households each month. The items in the supplement are asked, as appropriate, of members of the households. The response rate for the August 2023 supplement was 85 percent, and a similar response rate is expected in August 2024.

2. Describe the procedures for the collection of information including:

- **Statistical methodology for stratification and sample selection,**
- **Estimation procedure,**
- **Degree of accuracy needed for the purpose described in the justification,**
- **Unusual problems requiring specialized sampling procedures, and**
- **Any use of periodic (less frequent than annual) data collection cycles to reduce burden.**

This is a supplemental survey associated with the CPS one month each year (August 2024, August 2025, and August 2026). The statistical properties of these supplemental items will fall within those associated with the CPS itself (see Attachment I.) Specifically, sample design and selection are detailed in Chapter 2-2 of “Current Population Survey Design and Methodology: Technical Paper 77” (available in Attachment H or online at <https://www2.census.gov/programs-surveys/cps/methodology/CPS-Tech-Paper-77.pdf>.)

3. Describe methods to maximize response rates and to deal with issues of non-response. The accuracy and reliability of information collected must be shown to be adequate for intended uses. For collections based on sampling, a special justification must be provided for any collection that will not yield "reliable" data that can be generalized to the universe studied.

For the August 2022 basic CPS, the household-level nonresponse rate was 28.7 percent. The person-level nonresponse rate for the Veterans supplement was an additional 15.3 percent. Since the basic CPS nonresponse rate is a household-level rate and the Veterans supplement nonresponse rate is a person-level rate, we cannot combine these rates to derive an overall nonresponse rate. Nonresponding households may have fewer persons than interviewed ones, so combining these rates may lead to an overestimate of the true overall nonresponse rate for persons for the Veterans supplement.

Response rates and data accuracy for the CPS are maintained at high levels through internal consistency edits in the computerized instrument, interviewer instructions, training, and close monitoring of these data. For additional information, see "Current Population Survey Design and Methodology: Technical Paper 77" (organization and training of interviewers is detailed in Chapter 3-5, and reinterview design and methodology is described in Chapter 4-1), available in Attachment H or at <https://www2.census.gov/programs-surveys/cps/methodology/CPS-Tech-Paper-77.pdf>.

For additional information on the design of and preparation of the CPS sample, Chapter 2-2 of "Current Population Survey Design and Methodology: Technical Paper 77" (available in Attachment H or online at <https://www2.census.gov/programs-surveys/cps/methodology/CPS-Tech-Paper-77.pdf>. Weighting and estimation are discussed in Chapter 2-3.)

4. Describe any tests of procedures or methods to be undertaken. Testing is encouraged as an effective means of refining collections of information to minimize burden and improve utility. Tests must be approved if they call for answers to identical questions from 10 or more respondents. A proposed test or set of test may be submitted for approval separately or in combination with the main collection of information.

The Veterans Supplement is subject to the same testing procedures as the monthly CPS. This includes instrument testing, output testing, and systems testing. Attachment I discusses the reliability of the estimates produced from the August 2022 Veterans Supplement.

5. Provide the name and telephone number of individuals consulted on statistical aspects of the design and the name of the agency unit, contractor(s), grantee(s), or other person(s) who will actually collect and/or analyze person(s) who will actually collect and/or analyze the information for the agency.

The following individuals may be consulted concerning the statistical data collection and analysis operation:

Statistical Design:

Tim Trudell
Demographic Statistical Methods Division
Bureau of the Census
(301) 763-0465

Statistical Analysis:

Nicholas Johnson
Office of Employment and Unemployment Statistics
Division of Labor Force Statistics
Bureau of Labor Statistics
(202) 691-7870

Data Collection/Survey Design:

Kyra Linse
Associate Director Demographic Programs
Bureau of the Census
kyra.m.linse@census.gov
(301) 763-9280
