

or corrections are substantive or affect the analysis or conclusions in the FEIS. After carefully considering alternatives described and analyzed in the FEIS and comments from the public on the Draft EIS, the DOI has decided to approve the COP for Revolution Wind under the preferred Alternative G, which reduces the installation to 65 WTGs from the Project as proposed in the COP. The full text of the mitigation, monitoring, and reporting requirements, which will be included in BOEM's COP approval, are available in the ROD, which is available on BOEM's website at: <https://www.boem.gov/renewable-energy/state-activities/revolution-wind>.

NMFS has adopted BOEM's FEIS to support its decision of whether or not to promulgate the requested ITR and issue the associated LOA to Revolution Wind. NMFS' final decision of whether or not to promulgate the requested ITR and issue the LOA will be documented in a separate Decision Memorandum prepared in accordance with internal NMFS policy and procedures. The final ITR and a notice of issuance of the LOA, if issued, will be published in the **Federal Register**. The LOA would authorize Revolution Wind to take a small number of marine mammals incidental to Project construction and would set forth permissible methods of incidental taking; means of effecting the least practicable adverse impact on the species and its habitat; and requirements for monitoring and reporting. Pursuant to Section 7 of the Endangered Species Act, NMFS issued a final Biological Opinion to BOEM on July 21, 2023, evaluating the effects of the proposed action on ESA-listed species. The proposed action in the opinion includes the associated permits, approvals and authorizations that may be issued.

USACE has decided to adopt BOEM's FEIS and issue a permit to Revolution Wind pursuant to section 10 of the RHA and section 404 of the CWA. The DA permit will authorize Revolution Wind to discharge fill below the high tide line of waters of the United States. It will also authorize Revolution Wind to perform work and place structures below the mean high water mark of navigable waters of the United States and to affix structures to the seabed on the OCS.
