Peace Corps

Mental Health Evaluation and Treatment Summary

Peace Corps must fully and accurately understand the current health of potential Volunteers and assess whether we can appropriately support and accommodate their individualized health care needs.

This individual has applied to serve as a Peace Corps Volunteer and has reported a history of a mental health condition, counseling, and/or use of a medication related to a mental health condition.

During Peace Corps service, a Volunteer may be placed in a community that is very isolated and remote with a history of high crime, violence, extreme poverty, and/or inequitable treatment of members of the population. There may be limited access to Western-trained mental health professionals and little support for existing or new mental health symptoms. Please take these factors into consideration when completing this form.
