Each form change and associated burden are described below.

Long-Term Care Component, COVID-19 Module (57.144, 57.145, 57.158)

1. The Resident Impact and Facility Capacity form (57.144) collects info regarding the number of positive tests in the facility each week (non-cumulative number: facilities only report new counts since the last time data was reported to NHSN). This form also collects information regarding resident deaths, COVID-19 vaccination status of newly positive residents, influenza, testing availability, and PPE supply. With the Public Health Emergency ending, the COVD-19 pathways will be scaled down and this will include removing elements form the RIFC form. Those variables include Admissions, Not Vaccinated, Partial Vaccination, Complete Primary Vaccination Series, Additional or Booster Vaccination, One Booster, Two or More Boosters, Testing Availability, Influenza and PPE Supply

Time Burden: estimate 15 minutes to complete the form **Change in Time Burden:** decreased by 30 minutes

2. The Staff and Personnel Form (57.145) collects info regarding the number of positive tests in the facility each week (non-cumulative number: facilities only report new counts since the last time data was reported to NHSN). This form also collects information regarding COVID-19 staff deaths, influenza, and staffing shortages. Staff deaths, influenza, and staffing shortages will be removed from this form/pathway.

Time Burden: estimate 5 minutes to complete the form **Change in Time Burden:** decreased by 10 minutes

3. The Therapeutics form (57.158) currently collects information regarding the number of Therapeutics that have been administered each week as well as where the stock of the therapeutics was stored (non-cumulative number: facilities only report new counts since the last time data was reported to NHSN). This pathway will be removed, and facilities will no longer need to report these data.

Time Burden: estimate 0 minutes to complete the form **Change in Time Burden:** decreased by 10 minutes

Justification for changes:

The COVID-19 Surveillance Pathways will be revised/condensed to remove data elements that are no longer required for reporting federal pandemic response activities (PHE ending).

NHSN COVID-19 Hospital Module

With the end of the Public Health Emergency (PHE) for COVID-19, NHSN is reducing the number of data elements required by healthcare facilities and reducing the frequency in which data will be reported to NHSN. The elements removed are no longer required for federal pandemic response activities. Specifically for hospitals, required data elements will be reduced from 62 to 44. Data elements made optional can still be collected by jurisdictional partners to meet their needs and will remain on the reporting templates in NHSN. Reporting cadence will change from a daily to a weekly requirement, with values reported for each day of the previous week. The compliance enforcement period will be expanded from 14 days to 28 days.
