

#### IC: Case Subject Interview

Study personnel also conduct an interview with each case subject who has provided consent to participate (or a surrogate in cases where the case subject is unable to communicate) to develop an understanding about the crash circumstances. NHTSA estimates the interview requires approximately one hour of the respondent's time, which involves questioning by a CIREN contractor team member and capturing photographs of integumentary injuries. NHTSA has developed interview forms specifically for the motor vehicle occupants or pedestrians enrolled in CIREN.
