## Data Elements Manual

### Edition 1.0

Public reporting burden of this collection of information for data elements is estimated to average 72 hours per program (46 hours per program for pre-hospital data and 26 hours per program for in-hospital data) including the time for reviewing instructions, searching existing data sources, gathering, maintaining, and transmitting the data needed, and completing and reviewing the collection of information. An agency may not conduct or sponsor, and a person is not required to respond to a collection of information, unless it displays a currently valid OMB control number. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden to CDC/ATSDR Reports, Clearance Officer, 1600 Clifton Road NE, MS D-74, Atlanta, GA 30333. Attn: PRA (0920-0612). Do not send the completed form to this address.

# INTRODUCTION

This Coverdell Data Elements Manual was written to provide guidance on the collection and submission of data elements (DEs) for the Paul Coverdell National Acute Stroke Program (PCNASP). The Program currently funds 13 recipients of the cooperative agreement (“recipients”) across the United States. Recipients are required to collect and report DEs as part of standardized data reporting for the Coverdell Program. DEs are used by the CDC and its recipients to describe, monitor, and assess progress and performance of the program.

The DEs in this manual (Edition 1) received approval in September 2021 from the Federal Office of Management and Budget. This manual pertains to the cooperative agreement DP21-2102. Data for the 163 DEs can be separated into two sections: *Pre-Hospital* and *In-Hospital*. There are 4 additional administrative DEs that will precede both sections and will be used to append the *Pre-Hospital* and *In-Hospital* data files together. These 4 administrative DEs, bring the total number of DEs to 167.

The DE manual includes information about technical specifications for the DE variables included in each of the categories, guidance for their submission, and conventions for processing the data. Specifications for each DE include variable name, prompt, format, source of data, denominator population, acceptable values, description, and use for data analysis. **Please note that the format provided is relevant for data submitted by recipients for a four-month reporting period, which corresponds to three submissions per year.** Variables are reported for each patient. The values for each patient establish a record for their hospital visit. The manual is organized as follows:

**Pre-Hospital.** This section includes 8 DE variables. It includes data about the *Pre-Hospital* aspect within the stroke continuum of care. It includes Emergency Medical System (EMS) arrival, EMS departure, patient age and gender, as well as the performance of a stroke screen and glucose level.

**In-Hospital.** This section contains 155 DE variables. It includes data about the *In-Hospital* aspect within the stroke continuum of care. It includes demographic information that includes age, gender, race, ethnicity, and insurance status. Additional information includes EMS information, data and time of hospital arrival, hospital admission status, comfort measures, medications taken prior to admission, medical history, admission data, telestroke, imaging, patient last known to be well, first discovery of stroke-like symptoms, NIH Stroke Scale score, stroke treatment, other complications, active bacterial or viral infection at admission or during hospitalization, date of discharge from hospital, principal discharge ICD-10-CM diagnosis, clinical diagnosis related to stroke that was ultimately responsible for this admission, discharge disposition, functional status at discharge, antihypertensive treatment at discharge, lipid treatment, atrial fibrillation, antithrombotics at discharge, smoking counseling, stroke education, and rehabilitation.

**Administrative.** This section contains 4 DE variables that are necessary for analytical utility, data quality, and program fidelity. These are State FIPS, unique patient identifier, residential zip code, and unique hospital identifier. These DEs assist with monitoring program fidelity, where the expectation is to serve participants disproportionately impacted by high prevalence of risk factors for stroke events, as well as stroke outcomes. **At this time, these DEs are formally being added through an OMB Change request.**

This manual is a living document that will be updated occasionally. When modifications are necessary, CDC will notify recipients that the updated manual is available on the Awards Management Platform (AMP).

## TECHNICAL ASSISTANCE RESOURCES

CDC has developed several strategies and tools to provide technical assistance and support in collecting and submitting data. This appendix describes the various types of technical assistance available to Coverdell recipients

### **Types of Data Technical Assistance Available**

Technical assistance available to recipients can be broadly categorized as individualized technical assistance, group technical assistance, and tools. Below, specific types of technical assistance/tools within these categories are described. The table at the end of this subsection summarizes the types of technical assistance/tools by category, provider, and timeline.

#### *Individualized Technical Assistance*

- **Data Review Calls.** After each data element submission, data reports are generated and may be reviewed with recipients during a data review call. As needed, data quality reports and other materials may also be reviewed.
- **Helpdesk Requests.** Recipients can request individualized technical assistance through the Helpdesk ([coverdell@rti.org](mailto:coverdell@rti.org)). A health scientist from the CDC data team will collaborate with the data contractor to respond to technical assistance requests. This type of assistance is tailored to the recipient and the request. More information is provided in the following subsections of this appendix, “Requesting Individualized Technical Assistance” and “Helpdesk for Technical Assistance Requests.”

#### *Group Technical Assistance*

- **Ad Hoc Data Calls and Trainings.** Throughout the course of the year, data issues affecting a majority of or all recipients may be identified, either through individualized technical assistance or as a

result of changes to the data elements submission process and specifications (e.g., modification of data elements specifications, added data elements variables). As a result, trainings or group communications may be needed, which can be fulfilled by holding ad hoc data calls and/or training seminars.

*Tools*

- **Coverdell Data Manual.** This manual is a technical assistance tool for recipients. It provides detailed guidance on the data element submission process and data element specifications, and it will be updated as necessary to stay current with the data submission and collection requirements. Recipients can access the current edition in the Awards Management Platform (AMP).

*Summary of Types of Technical Assistance and Tools Available*

<b>TA Type</b>	<b>Provider</b>	<b>Timeline</b>
<i>Individual</i>		
Data review calls	Project officers and/or data contractor	Tri-annually, after data element submission and release of data reports
Helpdesk requests	Data contractor	As needed
<i>Group</i>		
Ad hoc data calls and trainings	Data contractor	As needed
<i>Tools</i>		
Coverdell Data Manual	Data contractor	Ongoing

**Helpdesk for Individualized Data Technical Assistance Requests**

Technical assistance may be requested by emailing the data contractor at [coverdell@rti.org](mailto:coverdell@rti.org). Once a request for technical assistance related to a data element is received, Helpdesk will automatically confirm receipt of the request and collaborate with the Health Scientists to resolve the request. For more complex requests or those requiring project officer input, responses may take more than 24 hours. All requests are tracked by Helpdesk staff and the health scientists to ensure that follow-up is completed for all requests and that responses are satisfactory to the requester. In addition, project officers will be kept abreast of the technical assistance needs of their programs. The tracking of technical assistance requests by the Helpdesk, health scientists, and project officers allows

CDC to identify common issues to inform Program-wide technical assistance.
