T-MSIS Data Dictionary - Changes Between Versions 2.4.0 and 4.0.0 - Redline

PRA Disclosure Statement: The Transformed Medicaid Statistical Information System (T-MSIS) is used to assist the Centers for Medicare & Medicaid Services (CMS) with monitoring and oversight of Medicaid and CHIP programs, to enable evaluation of demonstrations under section 1115 of the Social Security Act and to calculate quality measures and other metrics, including those reported through the new Medicaid and CHIP Scoreboard. Section 4735 of the Balanced Budget Act of 1997 included a statutory requirement for states to submit claims data, enrollee encounter data, and supporting information. Section 6504 of the Affordable Care Act strengthened this provision by requiring states to include data elements the Secretary determines necessary for program integrity, program oversight, and administration. Under the Privacy Act of 1974 any personally identifying information obtained will be kept private to the extent of the law. According to the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number. The valid OMB control number for this information collection is 0938-0345 (Expires: 03/31/2026). The time required to complete this information collection is estimated to average 10 hours per response, including the time to review instructions, search existing data resources, gather the data needed, and complete and review the information collection. The HCBS Taxonomic classification system was adopted by CMS in August 2012. To acknowledge state variation, services and categories are defined based on the minimum definition necessary to establish mutually distinct categories and services. Some services are defined in part by characteristics that are NOT in that service. For example, the difference between companion services and personal care is that companion services do not include assistance with activities of daily living (ADLs) such as bathing, dressing, eating, and toileting. Some of the services reflected by the HCBS Taxonomy including, but not limited to personal care, case management, home health aide, and physician services, may (and in some case, must) also be covered under the Medicaid State Plan. The definitions below only define these services for purposes of Section 1915(c) Waivers and the State Plan Home and Community-Based Services benefit authorized by Section 1915(i). States interested in reflecting services as “extended state plan” services must offer them in accordance with state plan service definitions. For claims where payment is NOT determined at the individual line level (PAYMENT-LEVEL-IND = 1), the claim lines' associated allowed (ALLOWED-AMT) and paid (MEDICAID-PAID-AMT) amounts are left blank and the total allowed (TOT-ALLOWED-AMT) and total paid (TOT-MEDICAID-PAID-AMT) amount is reported at the header level only. For claims where payment/allowed amount is determined at the individual lines and when applicable, cost-sharing and/or coordination of benefits were deducted from one or more specific line-level payment/allowed amounts (PAYMENT-LEVEL-IND = 2), the allowed (ALLOWED-AMT) and paid (MEDICAID-PAID-AMT) amounts on the associated claim lines should sum to the total allowed (TOT-ALLOWED-AMT) and total paid (TOT-MEDICAID-PAID-AMT) amounts reported on the claim header. For claims where payment/allowed amount is determined at the individual lines but then cost sharing or coordination of benefits was deducted from the total paid/allowed amount at the header only (PAYMENT-LEVEL-IND = 3), then the line-level paid amount (MEDICAID-PAID-AMT) would be blank and line-level allowed (ALLOWED-AMT) and header level total allowed (TOT-ALLOWED-AMT) and total paid (TOT-MEDICAID-PAID-AMT) amounts must all be populated but the line level allowed amounts are not expected to sum exactly to the header level total allowed. 					For example, if a claim for an office visit and a procedure is assigned a separate line-level allowed amount for each line, but then at the header level a copy is deducted from the header-level total allowed and/or total paid amounts, then the sum of line-level allowed amounts may not be equal to the header-level total allowed amounts or correspond directly to the total paid amount. If the state cannot distinguish between the scenarios for value 1 and value 3, then value 1 can be used for all claims with only header-level total allowed/paid amounts.

The HCBS Taxonomic classification system was adopted by CMS in August 2012. To acknowledge state variation, services and categories are defined based on the minimum definition necessary to establish mutually distinct categories and services. Some services are defined in part by characteristics that are NOT in that service. For example, the difference between companion services and personal care is that companion services do not include assistance with activities of daily living (ADLs) such as bathing, dressing, eating, and toileting. Some of the services reflected by the HCBS Taxonomy including, but not limited to personal care, case management, home health aide, and physician services, may (and in some case, must) also be covered under the Medicaid State Plan. The definitions below only define these services for purposes of Section 1915(c) Waivers and the State Plan Home and Community-Based Services benefit authorized by Section 1915(i). States interested in reflecting services as “extended state plan” services must offer them in accordance with state plan service definitions. Consult with the CMS Division of Benefits and Coverage in those instances to ensure definition alignment. All 3 of these NCPDP fields are situationally required and independent of one another. Pharmacists may report none, one, two or all three. NCPDP situational rules call for one or more of these values in situations where the field(s) could result in different coverage, pricing, patient financial responsibility, drug utilization review outcome, or if the information affects payment for, or documentation of, professional pharmacy service. The NCPDP ~~"Results~~'Reasons of Service Code"' (bytes 1 ~~&~~and 2 of the T-MSIS DRUG ~~Utilization -~~UTILIZATION-CODE) explains whether the pharmacist filled the prescription, filled part of the prescription, etc. The NCPDP "'Professional Service Code"' (bytes 3 ~~&~~and 4 of the T-MSIS Drug Utilization Code) describes what the pharmacist did for the patient. The NCPDP "'Result of Service Code"' (bytes 5 ~~&~~and 6 of the T-MSIS Drug Utilization Code) describes the action the pharmacist took in response to a conflict or the result of a pharmacist's professional service. Because the T-MSIS Drug Utilization Code data element is a composite field, it is necessary for the state to populate all six bytes if any of the three NCPDP fields has a value. States can report at whatever level of granularity is available to them in their system and a data user can choose to use them as-is or roll the values up in broader categories depending on whichever approach best meets their needs. CMS periodically reviews the values reported to MARITAL-STATUS-OTHER-EXPLANATION to determine if states are appropriately using it only when there is no existing MARITAL-STATUS value that reflects the state's marital status description for an individual AND to determine whether it is necessary to add additional T-MSIS MARITAL-STATUS values to reflect commonly used state martial status descriptions for which there is no existing T-MSIS MARITAL-STATUS value. It is expected that an enrollees' eligibility group assignment (ELG087 - ELIGIBILITY-GROUP) will change over time as his/her situation changes. Whenever the eligibility group assignment changes (i.e., ELG087 has a different value), a separate ELIGIBILITY-DETERMINANTS record segment must be created. In such situations, there would be multiple ELIGIBILITY-DETERMINANTS record segments, each covering a different effective time span. In such situations, the value in ELG087 would be the primary eligibility group for the effective date span of its respective ELIGIBILITY-DETERMINANTS record segment, and the PRIMARY-ELIGIBILITY-GROUP-IND data element on each of these segments would be set to '1' (YES). Should a situation arise where a Medicaid/CHIP enrollee has been assigned both a primary and one or more secondary eligibility groups, there would be two or more ELIGIBILITY-DETERMINANTS record segments with overlapping effective time spans - one segment containing the primary eligibility group and the other(s) for the secondary eligibility group(s). To differentiate the primary eligibility group from the secondary group(s), only one segment should be assigned as the primary group using PRIMARY-ELIGIBILITY-GROUP-IND = 1; the others	PRIMARY-ELIGIBILITY-GROUP-IND	ELG00005	ELIGIBILITY-DETERMINANTS	X(1)	~~8~~7	~~58~~56	~~58~~56	~~1.~~1. MCR027	MCR.002.027	CORE-BASED-STATISTICAL-AREA-CODE	Core Based Statistical Area Code	Mandatory	A code signifying whether the Managed Care Organization's (MCO) service area falls into one or more metropolitan or micropolitan statistical areas. Whenever a service area straddles two types of areas (e.g., metropolitan ~~&~~and micropolitan, metropolitan ~~&~~and non-CBSA area) classify the service area based on the denser classification. Metropolitan and micropolitan statistical areas (metro and micro areas) are geographic entities defined by the U.S. Office of Management and Budget (OMB). The term "Core Based Statistical Area" (CBSA) is a collective term for both metro and micro areas. A metro area contains a core urban area of 50,000 or more population, and a micro area contains an urban core of at least 10,000 (but less than 50,000) population. Each metro or micro area consists of one or more counties and includes the counties containing the core urban area, as well as any adjacent counties that have a high degree of social and economic integration (as measured by commuting to work) with the urban core. The U.S. Office of Management and Budget (OMB) defines metropolitan or micropolitan statistical areas based on published standards. The standards for defining the areas are reviewed and revised once every ten years, prior to each decennial census. Between censuses, the definitions are updated annually to reflect the most recent Census Bureau population estimates. The current definitions are as of December 2009.
