Document History

Date	Spec	App	Summary of Changes	Revised by
4/14/04	.01	1.0	Initial version	Robby Kilgore
4/16/04	.02	1.0	Sample Calls updated	Robby Kilgore
4/20/04	.03	1.0	Updated sample calls post review	Robby Kilgore
4/20/04	.04	1.0	Begin DM Tables	Robby Kilgore
4/21/04	.05	1.0	Adding Name 2.0 OSDM Tables	Robby Kilgore
4/21/04	.06	1.0	Added 2.0 plus post Name states	Robby Kilgore
4/22/04	.07	1.0	Added Visio details for main speech application	Robby Kilgore
4/22/04	.08	1.0	Debugged tables	Robby Kilgore
4/22/04	.09	1.0	Consolidated exit tables, synced Visio flows, updated demographics slightly.	Robby Kilgore
4/23/04	.10	1.0	Added global handoffs, reconciled sample call text.	Robby Kilgore
4/23/04	.11	1.0	Included feedback from Joe and other tweaks for Draft release	Robby Kilgore
4/23/04	.12	1.0	Added Joe's changes for Draft	Robby Kilgore
4/26/04	.13	1.0	Folded in comments from CPT review call	Robby Kilgore
4/28/04	.20	1.0	Changed Name 2.0 to 1.12 interaction model	Robby Kilgore
4/28/04	.21	1.0	Comb through for any bugs introduced by changes to interaction model	Robby Kilgore
4/28/04	.22	1.0	Reviewed and tracked changes with Joe Farhat and Jon Bloom	Robby Kilgore
4/29/04	.23	1.0	Folded in changes from last review	Robby Kilgore

Date	Spec	App	Summary of Changes	Revised by
4/29/04	1.0	1.0	Ready release for client review	Robby Kilgore
4/30/04	1.01	1.0	Received input from SSA / CPT review call	Robby Kilgore
5/2/04	1.02	1.0	Updated spec to reflect input from SSA / CPT review call	Robby Kilgore
5/4/04	1.03	1.0	Added MaxHelp hand-off prompts and miscellaneous other small changes covered in phone meeting 5/4/04	Robby Kilgore
5/5/04	1.04	1.0	Updated sample calls	Robby Kilgore
5/5/04	1.05	1.0	Small changes to sample call and removal of "Agent" verbiage.	Robby Kilgore
5/19/04	1.06	1.0	Reconciled the document to reflect small text changes from the recording sessions as well as flagging marking global vs. local apologies.	Robby Kilgore
5/27/04	1.07	1.0	Reconciled prompt text with recordings.	Robby Kilgore
6/11/04	1.11	1.0	Reconciled against bugs, plus added changes from UT	Robby Kilgore
6/14/04	1.12	1.0	Created new document for safety sake. Removed punctuation from Grammars	Robby Kilgore
6/15/04	1.13	1.0	Updated based on review with SSA / MCI / CPT	Joe Farhat
6/16/04	1.14 / 1.15	1.0	Updated to resolve CR1582, 1583, 1584, 1585, 1590, 1591, 1592, 1593, 1613, and 1624. Minor update to nomatch prompts in 1040_ConfirmName	Joe Farhat
6/17/04	1.16	1.0	Tiny tweak to the prompt text in 1400080, Added note about Confirmation Grammars	Robby Kilgore
6/30/04	1.18 /	1.0	Fixing up the last few CRs	Robby Kilgore /

	1.19.1			Joe Farhat
8/9/04	1.20	1.0	Revisions based on Pilot tuning report.	Robby Kilgore
8/10/04	1.21	1.0	Finalized UI Doc changes post review with SSA	Robby Kilgore
9/15/04	1.23	1.0	Adjustments from Tuning Report #2	Robby Kilgore
10/25/04	1.24	1.0	Adjustments from final tuning	Robby Kilgore
10/28/04	1.25	1.0	Clarified deactivation of global agent grammar in 1000_SayLastName and 1020_SayFirstName	Joe Farhat
11/04/04	1.26	1.0	Final tweaks to verbiage to match recordings	Robby Kilgore
11/05/04	1.27	1.0	Last minute corrections and acceptance of all changes FINAL VERSION	Robby Kilgore

Date	Spec	App	Summary of Changes	Revised by
6/23/05	2.0	1.0	Changes based on tuning analysis and recommendations of June 2005. 1. 1020_SayFirstName – change Initial prompt to discourage spelling here. 2. 1040_ConfirmName – add more synonyms for Yes and No. 3. 1060_GetMistake – add synonym for Both. 4. DM9000_Check_For_Alt_Name – Change Initial prompt to discourage barge in and speaking of a name rather than Yes or No. Also **turn off barge-in**. 5. DM11000_ReturnToMain_or_HangUP – no action – rejected recommendation of adding Yes/Yeah as synonyms for Main Menu and No as synonym for Goodbye. The number of occurrences is low. Yes seems just as likely a response to Goodbye as to Main Menu. The cost of failure to the caller in this DM is very low. 6. Eliminated useless Appendix A. 7. PP2000_Standard_Greeting – Added new prompts for the case when these services are invoked from the Speak Freely N8NN rather than the old DTMF N8NN.	Paul Sawyer
15 Feb 06	2.1	1.0	1. Remove restriction on date of birth in DM5000. 2. Add support for blocked accounts. Affects PP1500, BR8000, DM11000.	Paul Sawyer
23 Mar 06	2.2	1.0	1. Corrected 500_EntryPrompt module for subsequent module when Spelling – TRUE and names_to_collect = LAST or LAST_FIRST 2.Fixed wording of default_name_spelllast_collection_noinputprompts1 in 1090_RespellLast 3. Fixed wording of default_name_spellfirst_collection_noinputprompts2 in 1070_RespellFirst 4. Fixed wording of default_name_spelllast_collection_reprompts1 in 1090_respellLast 5. Fixed wording of default_name_getmistake_collection_reprompts2 in 1060_GetMistake 6. Fixed wording of default_name_sayfirst_collection_nomatchprompts1 in 1020_SayFirstName	Phil Profili
18 Apr 07	2.2	1.34	1. Removed references to BR8100 2. Added new state, DB3050	Sean Stallings

			3. Updated DM3000 and BR3100	VZB
23 Apr 07	**2.2**	1.35	1. Updated 1000_SayLastName 2. Updated 1020_SayFirstName 3. Removed Confirmation logic from 1060_GetMistake 4. Updated PP2000 5. Removed PP9999 6. Updated BR3100	Sean Stallings VZB
21 May 07	**2.2**	1.36	Updated 1060 GetMistake	Sean Stallings VZB
05 July 07	**2.2**	1.37	Updated DM 4000, removed "great" from 50201	Sean Stallings VZB
10 July 07	**2.2**	1.38	Replaced wording in states 500 through 1090 with wording from corresponding KBA prompts. Added developers notes to states 500 through 1090 stating that these states now share prompting with KBA.	Sean Stallings VZB
11 July 07	**2.2**	1.39	Corrected some changes made in states 500 through 1090	Sean Stallings VZB
12 July 07	**2.2**	1.40	Incorporated new message numbers in 6.1 Timeouts and Retries, DM 4000 and DM 9000	Sean Stallings VZB
19 July 07	**2.2**	1.41	Updated 50206, 50307, 50308, 50312, 50367, 10062	Carol Cummings VZB
21 July 07	**2.2**	1.42	Updated	Carol Cummings VZB
08 August 07	**2.2**	1.43	Corrected DM 11000 to show that only Global Agent Command is disabled	Sean Stallings VZB
15 Aug 07	**2.2**	1.44	Corrected prompting in message number 50204	Sean Stallings VZB
08 Oct 07	**2.2**	1.45	Removed msg. 50368 from 1070 Removed msg. 50382, from 1090	Sean Stallings VZB
31 Oct 07	**2.2**	1.46	Broke message 10054 into two parts, 10054 and 10088. Allowed barge in= True for 10088.	Sean Stallings VZB
3 Mar 08	**2.2**	1.47	Added Privacy paragraph to chapter 6 Global Behavior Added BR 1900 Added BR 3999 Added BR 4005 Added 400 Updated DM 4000, 5000, 1000, 1010, 1020, 1030, 1070, 1090 and 9000; Added confidential flag setting data to module notes	Sean Stallings VZB
06 Mar 08	**2.2**	1.48	Corrected broken hyperlink in 6.4 Help Prompts Updated P2000, adjusted the wording to reflect the fact that we may or may not be collecting 5 pieces of information.	Sean Stallings VZB
10 Mar 08	**2.2**	1.49	Updated BR 1900, BR 3999, 400-Name Check Condition; ;	Sean

			Corrected reporting information for "if else" conditions.	Stallings VZB
21 Mar 08	2.2	1.5	Corrected reporting string in BR3999 and 400	Sean Stallings VZB
1 Apr 08	2.2	1.51	Updated reporting string for first and last name re-use	Sean Stallings VZB
4 Apr 08	2.2	1.52	Updated BR 1900, if callers information is complete callers now route to PP 6000. Added BR 4005. Clarified wording for BR1900 Check Null Condition	Sean Stallings VZB
11 Apr 08	2.2	1.53	In order to assure that re-use items are properly reported, in Check Null Condition, if TVDC items to collect = 0, the call must then route to the next Check Condition Module.	Sean Stallings VZB
17 Apr 08	2.2	1.54	Updated Module 9000 Added "Barge in" column to the prompt table, barge in is set to "false" for initial prompt, "true" for all others. Broke message 10054 into two parts, 10054 and 10088.	Sean Stallings VZB
21 Apr 08	2.2	1.55	Corrected broken link in table of contents. Corrected reporting strings for BR3999, BR4005, Module 400, BR5500	Sean Stallings VZB
2 May 08	2.2	1.56	Updated reporting strings for BR3999, BR4005, Module 400, BR5500	Sean Stallings VZB
7 May 08	2.2	1.57	Updated DM 9000, renumbered message 10088 to 10092, to prevent overlap.	Sean Stallings VZB
13 June 08	2.2	1.58	Updated Module 4005, module is now correctly named DOB_Check_Condition. Updated module 5000, 'entering from' field now shows entering from 4005 DOB_Check_Condition.	Sean Stallings VZB
23 June 08	2.2	1.59	Updated module 1090_RespellLast, 'Entering From' field no longer points to module 1070_RespellLast. This resolves ticket 20603.	Sean Stallings VZB
4 August 08	2.2	1.60	Updated module 4000_Get_SS_Number. To improve capture process the wording of all prompts has been changed to match SSN capture in KBA. Audio for Initial prompt, message 54201, changed to match KBA 50201 Audio for Retry 1 prompt, message 54202, changed to match KBA 50202. Corrected reporting tags in modules BR3999, BR4005 and 400. Removed spaces after commas. Corrected dead hyperlink issue in "Entering From" fields found in module 1000, modules 3050 through 9000, and modules 11000 through 14000. Updated Modules 4000 and 5000, updated 'results' column in the confirmation 'field' for Retry 1 and Timeout 1. Now shows an example of the wording a caller would hear, not the specific data field. Updated modules 1000, 1010, 1020, 1030 and 1040. Corrected references to 500_Intro. Now reads '500_EntryPrompt'. Updated Module 4000, now shows entering from Module 3999.	Sean Stallings VZB

21 August 08	2.2	1.61	Highlighted Barge-in changes in pink	Sean Stallings VZB
09September 08	2.2	2.0	Updated DM 3000, on 'no' condition call should route to DB 3050. BBN Findings Effort 1) Updated section 6.1 Time-outs and Retries, updated wording for confirmation retry 2, changed message 50345 to 50347. 2) Updated DM3000_CheckAOR, updated wording for retry 2, message 30022 3) Updated module 1040, for retry 2 replaced message 50345 with 50347. 4) Updated module 9000, updated message 10056 5) Highlighted all BBN Findings changes in Green	Sean Stallings VZB
25 September 08	2.2	2.1	Added Verizon Business proprietary statement to title page and all page footers.	Sean Stallings VZB
02 October 08	2.2	2.2	Updated 6.1 highlighted the BBN change to the global retry 2 in Green. Updated 1000_SayLastName, added condition for 'Failure and Alt Name' which now routes to PP6000 – this resolves ticket 22408. Added new wording for Other Last Name, retry 1,message 50310, caller will now only be asked to spell their other last name. Updated PP6000, now shows as entering in from 1000_SayLastName.	Sean Stallings VZB
01 December 08	2.2	2.3	COADD/BEVE-MRC Tuning 2 Effort-Recommendations From Nuance 1) Updated module 1070, added entry to 'Module Notes' stating that confidence levels for this module should be set to .400. 2) Updated module 1090, added entry to 'Module Notes' stating that confidence levels for this module should be set to .400	Sean Stallings VZB
29 January 09	2.2	2.4	Updated Header	Sean Stallings VZB
22, May 09	2.2	2.5	**FOAP Effort** Updated module PP 12000, added flag check and routing for FOAP condition.	Sean Stallings VZB
25 June 09	2.2	2.5.1	Corrected broken links in DM's 1030 and PP10000. Fixed typographical errors in DM's 4000 and 500.	Kim Rothlis VzB
23 March 10	2.2	2.5.2	Global Commands and Global Prompts (section 6.6), added Action for 'agent' command. OMB Attestation Addition Change Added DM 2988 Attestation Flag Check and DM2990_AttestationYN between modules P2000_Standard_Greeting and DM3000_Check_AOR Updated modules P2000 and DM3000 with correct routing/hyperlinks. Updated Section 5.2, High-Level Call Flow Diagram with the	Kim Rothlis VzB

			added DM's. MISC: Corrected entering from field for module PP1500_Getting Help_Operator	
29 April 10 **05 May 10**	**2.2**	2.5.3	Issue Fix (TBEV-5): Updated module 1070 RespellFirst, message 50367 with correct wording. 2990 – AttestationYN – Updated Success2 with MaxHelp	Kim Rothlis, VzB Carol Cummings VzB
10 May 2010	**2.2**	2.5.4	Updated PP13000_Goodbye , message #10078 to reflect 'as built' wording.	Kim Rothlis, VzB

Chapter 1:   Table of Contents

Chapter 2:   Background and Motivation

2.1   Executive Summary

The Social Security Administration serves callers currently receiving benefits as well as the general population with self-service and informational assistance. SSA is looking for ways to improve self-service options for both calling populations. Existing self-service options are currently available from the SSA web site or via the SSA N8NN telephone interface. SSA would like to enhance the telephone based self-service options to include advanced speech with a real-time request processing. The self-service functions contained within the scope of this project are 1) Automated replacement Medicare Card service 2) Automated benefit verification letter service.

2.1.1   What the application does

- **Self-Serve Medicare Card Replacement Requests** – Use of this application requires that you currently receive Medicare Benefits, or that you are eligible to receive benefits. This application will allow callers to request a new or replacement Medicare Card, and will receive approximately 785K calls annually.

- **Self-Serve Benefit Verification Requests** – Use of this application is for Social Security beneficiaries and will allow callers to request a statement of Social Security benefit verification letter for various purposes. This application will receive approximately 1.9 million calls annually.

2.1.2   Social Security Administration's goals

Primary goals of the speech application are to:

- Provide universal access to the SSA's automated services by providing an access channel for callers including the visually impaired.
- Offer real-time fulfillment of Benefit Verification letter requests or Medicare Replacement Card requests without needing to transcribe information collected by the existing automated Touch Tone system. Doing so will eliminate transcription time and transcription errors, as well as minimize the time lag between callers making the request and transcription of the request. Transcription time introduces delays in mailing out the forms, resulting in callers calling back to find out if their forms have been mailed.

One business objective for the speech application is cost reduction. Automating calls and minimizing the number of calls to SSA agents is the primary mechanism towards this goal. As such, the application will be implemented in a way to streamline and automate requests.

2.1.3   Callers' goals

Callers are seeking simple self service.

2.2   Aesthetics

Jill converses with caller in a clean yet informal, role-appropriate female voice. She is friendly, competent and resourceful. Even when she's unable to complete a caller's request, she usually provides helpful suggestions on how they can proceed.

2.3   Open Issues

Chapter 3:   About the Callers

3.1   Introduction

The design of the user interface is driven, in part, by ScanSoft's understanding of the population of callers to the system. Generally, callers will access the system for one of two reasons. They are either Medicare recipients looking to replace a Medicare card or Social Security recipients looking to receive a letter verifying their Social Security benefits. These two caller populations will call an 800 number to access the N8NN Main Menu system, and will eventually route themselves to the new BEVE/MRC speech application to request a replacement Medicare Card or request a verification of Social Security benefits.

It is presumed that all callers are first timers who will not call again.

3.2   Demographics Data
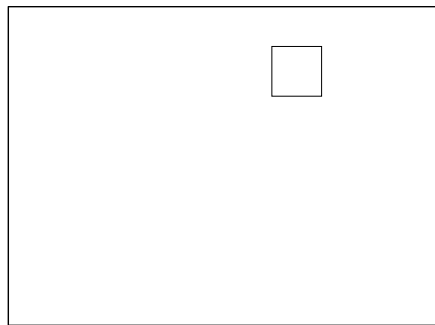

General Population: Age of Recipients
Thirty nine million people are receiving benefits. Eight percent of them are disabled and range in age from 18 on up. The rest are 65 and older. There are also 8 million people of any age on Supplemental Security Income (SSI)
Caller Population: Age Distribution

BEVE: Of the 1.9 million annual callers, 66% are below 61 years of age.
MRC: Of the 785,000 callers requesting Medicare Replacement Cards, 66% are above 70 years of age.

The chart below shows the age distribution within the general US population. It is included here because it is assumed that the age distribution of the potential caller population roughly matches that of the general population.

Who are SSA beneficiaries?

- Elderly (62+ years) 35.8 million. Most likely have not had experience with VUI

- Disabled (18+ years) 3.12 Million ~8% of the population?

- Low Income (18+) 8 Million Supplemental Security Income (SSI)

Age Distribution, 2000
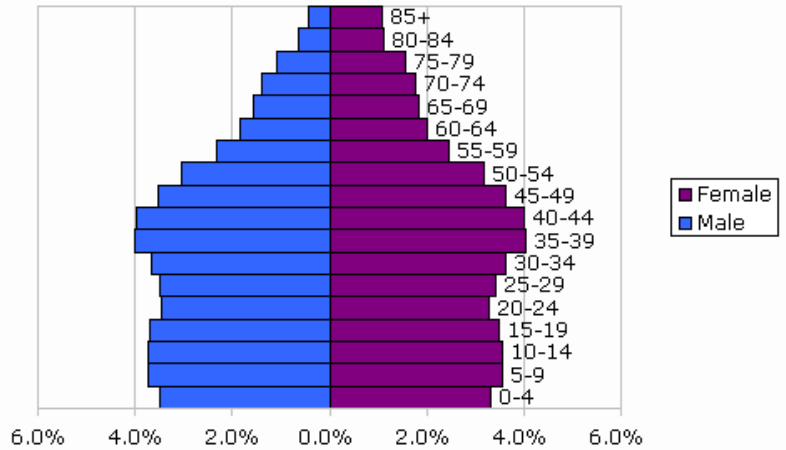

3.3   Caller Archetypes

James Richards
James is 67 years young, living in Grand Forks, North Dakota, 90 miles south of the Canadian border in eastern North Dakota. He has a small woodworking shop that's attached to his garage. The bank has told him he needs to provide a verification letter from the SSA as proof of income for a home improvement loan.

Jane Preston-Blair
She is originally from Norwalk, Connecticut. She married her hometown sweetheart 39 years ago and they enjoyed 28 years of US Air Force life. They traveled all over before retiring and settling in North Carolina and that is where they call home. They have four wonderful daughters, who have rewarded them with seven beautiful grandchildren. Jane is requesting a verification letter. Her name is hyphenated. She'll have to spell her name.

Julia Davis (Brewer)
Born in Tampa Florida in 1948, Julia is disabled. She is a Medicare recipient and has also received Supplemental Security Income for the last several years. She is seeking a Replacement Medicare Card. Recently divorced; she is still listed under her ex-husband's name. Her request fails on name mismatch and prompts for an alternate.

Jim Trouble
This boy is a 15 year old wanna-be hacker, randomly trying Social Security numbers. He has no criminal intent, but is curious to see if he can retrieve social security numbers by using the system. The information he gives does not validate and his request is rejected out of hand. He will likely hang up when he learns he is being transferred to an operator.

_____

Chapter 4:   Call Examples

Callers arrive at this portion of the system by navigating through the N8NN main menu (via DTMF or Simple Speech) system. This can take a minute or more of DTMF interactions. The design of the interactions should accommodate this change in interaction style between the DTMF portion of the larger system and the "conversational" nature of the Speech Application. This may be accomplished through audio iconography, signposting and prompt text.

Callers have explicitly chosen the self service route, and are transferred to the speech system AFTER choosing either the "replacement card" or "verification letter" path. The Speech system will receive a flag signifying the task the caller is attempting to complete.

The call scenarios covered here include:

- Benefits Verification Letter   No errors.
- Benefits Verification Letter   Handling hyphenated name / spelling.
- Medicare Card Request   Listed under an alternate name.
- Medicare Card Request   Rejected request.

4.1   Sample Call Design Considerations

4.1.1   Verboseness
Jill's audio and prompts are designed to accommodate the vast majority of callers whose VUI experience is either limited or perhaps nonexistent. The verbiage is designed to convey a clear mental model of how Jill behaves and what her capabilities are. This subtly helps callers remember to avoid chatty responses.

4.1.2   Confirmation Strategy:
When designing speech interfaces, it's often desirable to group confirmations together whenever possible; as in "So that's Tuesday at 10AM for an hour. Right?", but in Jill's case, the data-types seem too unrelated. Because of the nature of her application, she's forced to confirm at every turn. To justify this, she goes out of her way to acknowledge the importance of "getting things right". Her prompting for confirmations becomes briefer as the caller progresses.

_____

4.1.3 In Session Tracking:
There are some prompts which exploit a simple form of in session tracking. Jill's exit and hand-off phrases are context sensitive. That is, they specifically talk to the issues that have lead to the hand-off.

4.1.4 Longevity:
Since the system is basically a one shot (first time is the last time) system where the task completion is more important than longevity, Jill is slightly biased towards relatively severe hand-holding to minimize dropout. Jill doesn't advertising operator assistance, though she will eventually recommend it, as a path of last resort.

4.2 Call #1: No Collection Problems

James Richards
James is 67 years young, living in Grand Forks, North Dakota, 90 miles south of the Canadian border in eastern North Dakota. He has a small woodworking shop that's attached to his garage. The bank has told him he needs to provide a verification letter from the SSA as proof of income for a home improvement loan.

<Audio Icon>

Jill:	Hello. You've reached the automated Benefits Verification service. Before I send out your letter, there are five questions I'll need to confirm with you. We'll go through them one at a time, and you can speak your answers.
	To get started, I want to make sure I'll be sending it to the right place. Have you had a change of address recently? Please say "YES" or "NO".
Caller:	*No.*
Jill:	Great. Now - Please enter or say your nine digit Social Security number.
Caller:	*1 2 3 – 3 9 – 8 1 4 5*
Jill:	This is important, so I want to make sure I have it right. Your social security number is: 1 2 3 – 4 5 – 6 7 8 9. Is that right?
Caller:	*Yes.*
Jill:	And what's your date of birth? [Two second pause] For example, you can say…May 5th, 1957.

Caller:	*January 12ᵗʰ, 1931*

Caller: *January 12th, 1931*

Jill: Okay, so that's: <January 12th, 1931>. Is *that* right?

Caller: *Yeah.*

Jill: Okay. Now, for your name, I'll ask you to *say* it, then, I may ask you to *spell* it. Please say just your last name.

Caller: *Richards*

Jill: Thanks. Now I'll need your first name. Please say it now.

Caller: *James*

Jill: Okay. Let me read that back to you to make sure I've got it right.
Last name: Richards, spelled R I C H A R D S.
First name, James, spelled J A M E S.
Did I get it right?

Caller: *Yes.*

Jill: Alright. We're almost done. Before I send this off, do you have any other last name – for example, a professional or maiden name - that might be listed under this social security number?

Caller: *No.*

Jill: Okay. I've got everything we need. Hold on while I process your request.

Okay. You're all set. You should receive your Benefits Verification Letter in the mail within two weeks.

If there's anything else you'd like to do, say "MAIN MENU". Otherwise you can say "GOODBYE" or just hang-up.

Caller: *Goodbye.*

Jill: Okay Bye.

[Closing Audio Icon]

End Call

4.3 # Call #2: Handling Hyphenated Name with Spelling

Jane Preston-Blair
She is originally from Norwalk, Connecticut. She married her hometown sweetheart 39 years ago and they enjoyed 28 years of US Air Force life. They traveled all over before retiring and settling in North Carolina and that is where they call home. They have four wonderful daughters, who have rewarded them with seven beautiful grandchildren. Jane is requesting a verification letter. Her name is hyphenated. She'll have to spell her name.

[Opening Audiomark]

Jill: Okay. Now, for your name, I'll ask you to *say* it, then, I may ask you to *spell* it.

         Please, say just your last name.

Caller: *Preston-Blair*

Jill: Could you spell that for me?

Caller: *Yes. That's P R E S T O N   B L A I R*

Jill: Thanks. Now I'll need your first name. Please say it now.

Caller: *Jane.*

Jill: Okay. Let me read that back to you to make sure I've got it right.
         Last name: Preston-Blair, spelled *P R E S T O N B L A I R*.
         First name, Jane, spelled J A N E.
         Did I get that right?

Caller: *Yes.*

Jill: Alright. We're almost done. Before I send this off, do you have any other last name – for example, a professional or maiden name - that might be listed under this social security number?

Caller: *No.*

Jill: Okay. I've got everything we need. Hold on while I process your request.

         Okay. You're all set. You should receive your Benefits Verification Letter in the mail within two weeks.

_____

> If there's anything else you'd like to do, say "MAIN
> MENU". Otherwise you can say "GOODBYE" or just hang-
> up.

Caller: *Main Menu.*

Jill: Sure. I'll transfer you now.

[Closing Audio Icon]

4.4   Call #3: MRC - Misrecognized Name plus Alternate Name

Julia Davis (Brewer)

Born in Tampa Florida in 1948, Julia is disabled. She is a Medicare
recipient and has also received Supplemental Security Income for the
last several years. She is seeking a Replacement Medicare Card.
Recently divorced; she is still listed under her ex-husband's name. Her
request fails on name mismatch and prompts for an alternate.

Jill: Hello. You've reached the automated Medicare
             Replacement Card service. Before I send out your
             replacement card, there are five questions I'll need to
             confirm with you. We'll go through them one at a time,
             and you can speak your answers.

...   ...

Jill: Okay. Now, for your name, I'll ask you to *say* it, then, I
             may ask you to *spell* it.

             Please, say just your last name.

Caller: *Davis*

Jill: Thanks. Now I'll need your first name. Please say it now.

Caller: *Julia*

Jill: Okay. Let me read that back to you to make sure I've got
             it right.
             Last name: Davies, spelled D A V I E S.
             First name, Julia, spelled J U L I A.
             Did I get it right?

Caller: *No.*

Jill: Sorry about that. Which part is wrong? The first name, the
             last name or both?

_____

Caller: *The last name.*

Jill: Please spell your last name, one letter at a time.

Caller: *D A V I S*

Jill: Got it. We're almost done. Before I send this off, do you have any other last name – for example, a professional or maiden name - that might be listed under this social security number?

Caller: *Yes. My ex-husband's name was Brewer.*

Jill: I'm sorry, but I didn't understand. Would you like me to check under another last name? Please say "YES" or "NO".

Caller: *Yes.*

Jill: Okay. Let's try it. Give me the other last name.

Caller: *Brewer*

Jill: Could you spell that for me?

Caller: *B R E W E R*

Jill: Okay. Let me read that back to you to make sure I've got it right.
Last name: Brewer, spelled B R E W E R.
Did I get that right?

Caller: *Yes*

Jill: Okay. I've got everything we need. Hold on while I process your request.

Okay. You're all set. You should receive your Medicare Replacement Card in the mail within four weeks. If you live in Puerto Rico, please allow eight weeks for delivery.

If there's anything else you'd like to do, say "MAIN MENU". Otherwise you can say "GOODBYE" or just hang-up.

Caller: *Main Menu*

Jill: Sure. I'll transfer you now.

[Closing Audio Icon]

4.5 Call #4: A Rejected Request

Jim Trouble
This boy is a 15 year old wanna-be hacker, randomly trying Social Security numbers. The information he gives does not validate and his request is rejected out of hand.

<Audio Icon>

Jill: Hello. You've reached the automated Medicare Replacement Card service. Before I send out your replacement card, there are five questions I'll need to confirm with you. We'll go through them one at a time, and you can speak your answers.

             To get started, I want to make sure I'll be sending it to the right place. Have you had a change of address recently? Please say "YES" or "NO".

Caller: *No.*

Jill: Great. Now - Please enter or say your nine digit Social Security number.

Caller: *1 2 3 – 4 5 – 6 7 8 9*

Jill: This is important, so I want to make sure I have it right. Your social security number is: 1 2 3 – 4 5 – 6 7 8 9. Is that right?

Caller: *Yeah.*

Jill: And what's your date of birth? [Big pause] For example, you can say...May 5th, 1957.

Caller: *January 22nd, 1989*

Jill: Okay, so that's: January 22nd, 1989. Is *that* right?

Caller: *Yeah.*

Jill: Okay. Now, for your name, I'll ask you to *say* it, then, I may ask you to *spell* it.

             Please, say just your last name.

Caller:	*Jetson*
Jill:	Thanks. Now I'll need your first name. Please say it now.
Caller:	*George*
Jill:	Okay. Let me read that back to you to make sure I've got it right. Last name: Jetson, spelled J E T S O N. First name, George, spelled G E O R G E. Did I get it right?
Caller:	*Yes.*
Jill:	Alright. We're almost done. Before I send this off, do you have any other last name – for example, a professional or maiden name - that might be listed under this social security number?
Caller:	*No.*
Jill:	Okay. I've got everything we need. Hold on while I process your request. I'm sorry, but I wasn't able to process your request. Let me transfer you to someone who can help you with this. Please hold while I transfer your call.

[Transfer Call]

Chapter 5:   Call-Flow Diagrams

5.1   Legend for the call-flow diagrams

A high level process indicates a *series* of play-prompt or interaction states or data retrieval steps, etc.

A play-prompt state plays a waveform, or a series of waveforms, to the caller.

High level process
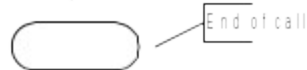

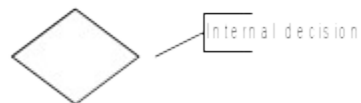

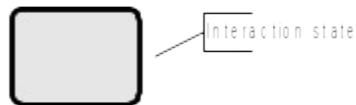

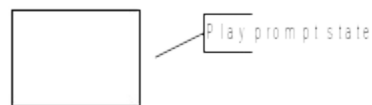

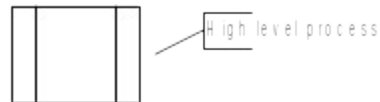

Play prompt state

An interaction state prompts the caller for input. It also handles all default timeout and retry behavior. It typically exits (continues to the next state) upon a successful recognition.

Interaction state

The 'data retrieval' icon represents back-end transactions, to a database, for example.

Internal check/ data retrieval

The 'internal decision' icon represents a logical check in the program code to branch on decision.

Internal decision

Connectors link different call-flow diagrams.

Connector

End of call

An end-of-call is a transfer, to another service or customer representative, or a system hang-up.

Call-flow diagrams built up of high-level process icons represent the global dialog structure of the application. These high-level diagrams parallel with the more detailed call-flow diagrams that outline every play-prompt, interaction state, data retrieval step, internal decision and possible ends of the call. These low-level charts give a precise graphical representation of the flow of the state tables in the section "Chapter 7: Detailed Dialog Specification", using the same (or matching) naming convention for easy reference.

Chapter 6:   Global Behavior

6.1   Time-outs and Retries

While the timeout and retry prompts are specified in the DialogModule tables, they are to be preceded by the appropriate apology prompt as outlined below:

| 55004	Retry 1&2	IF retry 1	upon rejection of speech	default_noanswerapologies1	I'm sorry, but I didn't understand you.
55005			upon rejection of DTMF	apology_dtmf1	Sorry, I'm not sure what you entered.
00111			upon confirmation	default_collection_wronganswerapologies1	My mistake.
55006		IF retry 2	upon rejection of speech	default_noanswerapologies2	I'm sorry, but I still didn't understand you.
51007			upon rejection of DTMF	apology_dtmf2	Sorry, I'm still not sure what you entered.
00113			upon confirmation	default_collection_wronganswerapologies2	My mistake again.
51008	Max Timeout			default_failureprompt	I'm sorry I'm having so much trouble.
51008	Max Retry			default_failureprompt	I'm sorry I'm having so much trouble.
51008	Max Help			default_failureprompt	I'm sorry I'm having so much trouble.
51009	Upon Confirmation Timeout 1			default_confirmation_noinputprompts1	Sorry, I didn't hear you. Please say YES or NO.
51010	Upon Confirmation Timeout 2			default_confirmation_noinputprompts2	I'm sorry, but I still didn't hear anything. Please say YES or NO.
50345	Upon Confirmation Retry 1			default_confirmation_reprompts1	Please say YES or NO.
50347	Upon Confirmation Retry 2			default_confirmation_reprompts2	If 'yes' press one, otherwise press two.

Typically the timeout and retry prompt specified in the table will be one and the same prompt, but they can also be a set of prompts, and they can also differ between timeout versus retry, or the first versus the second timeout or retry. In exceptional cases, different behavior is specified in the table for the second timeout or retry than outlined above.

Max. timeout is globally set to 2 – exceptions will be indicated in the tables.
Max. retry is globally set to 2 – exceptions will be indicated in the tables.
Max. help is globally set to 2 – exceptions will be indicated in the tables.

- Upon max timeout (two timeouts):
  Play Max Timeout verbiage described above then
  Go to: BR3100_AfterHours_Check; NeedAssistanceWith = MaxTimeout
- Upon max retry (two retries):
  Play Max Retry verbiage described above then
  Go to: BR3100_AfterHours_Check; set NeedAssistanceWith = MaxRetry
- Upon max help (two request for help):
  Play Max Help verbiage described above then
  Go to: BR3100_AfterHours_Check; set NeedAssistanceWith = MaxHelp
- Upon call completion, hang-up or call transfer, call end processing (call tracking information for reporting) will be performed.

6.2 Global Default Settings

Unless otherwise noted, all DMs should use default settings for confidence levels. Exceptions include: 1000_SayLastName, 1020_SayFirstName, 1070_RespellFirst, and 1090_RespellLast.

6.3 Privacy

The following information is considered confidential; **SSN, Date of Birth, First Name, Last Name**, and **Other Last Name**. The confidential flag should be set to true for all dialog modules collecting this information from the caller.

6.4 Help prompts

Start each Help prompt with the Help prompt audio icon (prompt file: *icon_help*), immediately followed by the Help prompt(s) as specified in the table. Unless otherwise specified by the DialogModule table, the default behavior will always be to 're-enter' the DialogModule directly after the Help prompt has played, so the application will listen for the input again. It does this while resetting any timeout and retry counters, thus as if it were the initial try, but *without playing the initial prompt again*. This is because the prompt for the input will be contained *in the Help prompt itself*, perhaps with a slightly different verbiage.

In summary:

1) Start with *icon_help*, which is the Help audio icon

2) Play Help prompt(s) specified in the UI table

3) Unless otherwise specified in the table, re-enter the same state to listen for caller input

4) Do *not* play the initial prompt of this state after the Help prompt

Important note: caller can barge-in on the Help prompt (unless otherwise specified by the table) which will cause the Help prompt to immediately *stop* playing and the recognizer to parse the caller's input according to the vocabulary of the state following the Help prompt (this state typically is the same state). While the caller can start speaking before the end of the Help prompt, the *beginning_of_speech* timer will not start until the Help prompt has finished playing (which is the same behavior as with any other prompt played that callers can barge-in on).
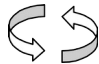

6.5 Default Confirmation Grammars

Unless otherwise overwritten by local grammars, all Dialog Modules will use the default (standard) confirmation grammars.

_____

6.6   Global Commands and Global Prompts

Global Commands Vocabulary

Speech Input		
This table specifies the global commands that can be spoken from anywhere in the application. The application behavior upon these commands is always the same, unless the DialogModule specifically overrides the global behavior.		

Commands	DTMF	Action (unless re-specified by the module)	Confirm.
"Help"	*	First play the Help prompt as specified for the module, then wait for input again. (New prompt for input will be part of each Help message.)	Never
"Agent", "Operator", "Representative" "Talk to an agent", "Talk to an operator", "Talk to a representative"	0	Go to: BR3100_AfterHours_Check; NeedAssistanceWith = UserRequestedAgent	Always

Confirmation prompts			
Message Number	Option	Name	Wording
51011	Operator	gl_conf_operator	You said you wanted to talk to one of our operators, Is that right?

Confirmation Option	Vocabulary	DTMF	Action	Confirm.
Yes	"Yes [it is]" "[Yes] that's right" "Right" "[That's] correct"	1	Go to: BR3100_AfterHours_Check; NeedAssistanceWith = UserRequestedAgent	Never
No	"No [it isn't]" "[No] that's not right"	2	Re-enter Dialog Module and play retry 1 or Nomatch 1 prompt as appropriate for the Dialog Module	Never

Developer Notes
On a negative confirmation of the "Agent" global command, return to the Dialog Module where the command was issued and play the retry 1 or nomatch 1 prompt as appropriate for the Dialog Module

6.7   DTMF Collection

6.7.1   General DTMF Usage

DTMF functionality is available by default through ScanSoft's OpenSpeech Dialog Modules in collections where numbers are being collected. Although DTMF functionality is native to the Date DialogModule, it has been decided *not* to advertise its use through the prompting in the application. This will eliminate lengthy or possibly confusing prompts. The underlying DTMF functionality will still reside within the Dialog Module and will be active within the application should a caller enter DTMF digits when prompted for their Date of Birth.

_____

6.7.2   Termination of digit strings using the pound sign

Any state prompting for input of which the DTMF equivalent is a digit string, such as the <u><Get_Social_Security_Number> state</u>, should accept the DTMF 'pound' sign as the immediate terminator of such a string. Naturally, this 'pound' sign should not be taken as part of the actual input or passed on as such to other parts of the application or any databases; it is merely an indicator that the digits before it form the complete numeric input. For example, while 1-5-0-0-0 indicates $150.00 in states collecting dollar amounts, input of the form 1-5-0-0-0-# is a valid indicator as well of that same amount.

Single-digit DTMF equivalents—such as '1', '2', '3', etc. for menu options—do *not* allow a terminating character.

6.7.3   Invalid DTMF input should be rejected

Any input that does not match to a menu option or other command, or does not match to numeric input prompted for at that point, should be rejected by the application, and lead to the application entering a retry. For example, when a state has only four menu options with DTMF equivalents '1' through '4', we should enter a rejection if someone enters '5' at that point. Another example would be a state asking for a sequence of digits: if someone provides DTMF input that contains an asterisk in the sequence, we should reject that input as well. (An alternative would be to go to *Help* in that situation, since '*' is the DTMF equivalent for it, but it's probably better to just reject digit-strings containing an '*'.) As outlined in the paragraph 6.7.2 above, the DTMF 'pound' sign should be accepted as a valid terminator of digit strings.

Please note that DTMF equivalents of global commands should always be accepted, even if they are not explicitly offered by any of the prompts in a given state. Examples of these are the 'star' sign for *Help* and '0' for an *Associate*.

6.7.4   End-of-DTMF timeout

The application's response time to DTMF input should always be as short as possible, but will depend at any point on whether the DTMF input given so far in a particular state is either clearly *unfinished*, or is *ambiguous*.

An example of clearly unfinished DTMF input would be a caller having entered '1' in a state where digit strings of various lengths can be collected, with the shortest input being a single digit. In this situation we give the caller *n* seconds to enter the remainder of a possible multi-digit string, where *n* is specified by some *inter-digit timeout* parameter. After each non-final digit entered by the caller, a countdown will start with a duration indicated by this parameter. If the countdown runs out before the caller has entered the next necessary digit, the application will go into a rejection.

Once the caller has entered the number of digits required to make the input complete—which is 9 digits in the case of an SSN, or 10 digits in case of a US phone number including area code—the application could take that input immediately and parse it, without running the countdown again. However, because the caller may enter the '#' sign to terminate the string, we will look at two variables to determine whether or not we indeed terminate the digit string based upon satisfaction of the number of digits alone:

1) *Fixed-length versus not-fixed-length digit strings*. If the expected digit-string is of a fixed length, then we can terminate the string as soon as we have reached the correct number of digits. If its length varies, then we cannot, unless we have reached the maximum allowable length.

2) *Next state being a collection state or not.* If the next state in the application is another collection state, and we are *not* using an *inter-digit timeout* after the last digit in a fixed-length or maximum-length string, then we run the risk that any '#' terminator entered by the caller will *not* get detected until the application has moved on to that next collection state. We do not have this risk if the next state is *not listening for input*, for example a database hit, or a play-message with *barge-in* turned off. Only where necessary, we eliminate this risk by using the *inter-digit timeout* even after the last digit of fixed-length or maximum-length string.

In short: we will terminate finished fixed-length and maximum length digit-strings *immediately* when the next state is *not listening for input*, and when the next state *is a collection state*, then for the maximum duration of the *inter-digit timeout* we will wait for a possible '#' terminator. When a '#' terminator is detected, we also *immediately* terminate the string.

Unfinished DTMF input can be ambiguous. This is the case when the digit(s) entered so far can be interpreted as *complete input* for other options or other numeric input. While the input could be considered complete under one interpretation it is *incomplete* under another interpretation, e.g. someone entered a '0' as the first digit of their Social Security Number, but '0' is also used to request an Associate. In this situation too, we use the *inter-digit timeout* to wait for possible further input, unless we have reached the maximum length.

6.7.5   Key-ahead

In any case, when we know that DTMF input is complete for a given context, the application should respond immediately and not run an end-of-DTMF-input countdown. If we were to introduce such a delay after each complete DTMF input, then we would seriously hinder the ability of power-users to comfortably 'key-ahead' through menus.

The so-called 'key-ahead' feature automatically works because of the zero-length timeout upon unambiguous DTMF input. As soon as the

caller hits one of the numbers on the keypad to choose a menu option, the application takes that digit and moves to the next state accordingly. If that response to the DTMF input takes a fraction of a second and the next state is a collection state again, then this next state will automatically take the next digit if it is a voice menu or the next sequence of digits if it is expecting a digit string. If the next state was a database hit instead, for example, then no input will be accepted during the database hit (because the app is not listening for anything), and once the application returns to a collection state, further input is listened for from then on. This means that if that database hit happened to have sub-zero response time, the user could have run right over it using 'key-ahead' and never noticed anything. No key-ahead is possible over database hits that need more time, or over play-states that have barge-in turned off. Naturally, over states expecting variable-length digit-string input, 'key-ahead' can only be achieved by using the '#' terminator.

6.8   Digit-String Playback

Variable digit-strings to be presented to the caller will be passed through a global routine that builds prompt lists to fluently play back Social Security Numbers. Valid input to this function is a string of digits, where a hyphens and spaces can be used to indicate grouping. For example: "017-85-3229". For each hyphen or space, the routine will insert a pause. The prompt set to be used for this consists of the following 1,231 prompts:

> 1,000 prompts: "...0 0 0, ..." through "...9 9 9, ..." (Non-final intonation)
> 100 prompts: "...0 0, ..." through "...9 9, ..." (Non-final intonation)
> 100 prompts: "...0 0." through "...9 9." (Final intonation)
> 10 prompts: "0..." through "9..." (Rising intonation)
> 10 prompts: "...0, ..." through "...9, ..." (Non-final intonation)
> 10 prompts: "...0." through "...9." (Final intonation)
> 1 prompt: 1/4 second silence.

6.9   Event Logging

Throughout all the User Interface Specifications, each state calls out the event logging that is unique to that state. For an overview of all of Event Logging, including global behavior for events such as what to do if an info token is not available; see the Event Logging section in the Functional Requirements Specification document.
