The table below shows the expected coefficients of variation (CV) for the estimates for adults and childr presentation criteria. Current NCHS presentation standards** moved away from CV and are based on ex standards generally allow for lower prevalence estimates to be released.

CV were calculated assuming a design effect of 2.5 CV in RED are estimates that would not have met the

Table 1. Sample Adolescents: Coefficients of Variation for estimation variables with varying expected pre

SUBGROUP Prevalence:		100%	90%	80%	70%
SUBGROUP Sample Size:		3,600	3,240	2,880	2,520
Prevalence of estimation variable:	Design Effect:	2.5	2.5	2.5	2.5
Variables with prevalence 2%	2%	18.45	19.44	20.62	22.05
Variables with prevalence 3%	3%	14.98	15.80	16.75	17.91
Variables with prevalence 5%	5%	11.49	12.11	12.84	13.73
Variables with prevalence 7%	7%	9.61	10.12	10.74	11.48
Variables with prevalence 10%	10%	7.91	8.33	8.84	9.45
Variables with prevalence 15%	15%	6.27	6.61	7.01	7.50
Variables with prevalence 20%	20%	5.27	5.56	5.89	6.30
Variables with prevalence 25%	25%	4.56	4.81	5.10	5.46
Variables with prevalence 30%	30%	4.03	4.24	4.50	4.81
Variables with prevalence 40%	40%	3.23	3.40	3.61	3.86
Variables with prevalence 45%	45%	2.91	3.07	3.26	3.48

ens and for smaller samples for subgroups. CV of 30% has been used as a threshold by NCHS for act confidence intervals but were established to be consistent with prior criteria. The current

CV critieria for presention.

evalence by expected sample sizes of covariates
