

**supporting\_statement\_a\_fss\_2025\_120924:** The discrepancy between Edward and Matthew's calculation of the % increase in cost of the survey from 2021-2024 is due to which year is considered as the base. Since the original year was 2021, that should be used as the base. Thus, the increase is indeed 49.11%, not 32.9%. As this is the number in the supporting statement as it is currently, the statement should not be changed.

**supporting\_statement\_b\_fss\_2025\_120924:** Typo, should be Department of Health and Human Services' with the apostrophe after the S rather than before it on page 3

The cognitive probe sample test described in this document is very impressive, combined with the nonresponse bias analysis it is clear ERS has put a lot of work in to make sure that both their samples are representative of the whole AND they are asking the right questions to answer their research questions.
