As I lay here in intense pain from a failed cervical spine surgery in 2016 and a lower back surgery. I was obviously born with a bad spine but was able to be upright when my pain was managed with the pain meds. I have tried sooo many other treatments the last few years, the latest a cervical pain stimulator. It like everything else doesn't help me with pain, leaving me laying down all day to keep from being sick with pain. Please consider what has been done to all of us who are suffering without proper pain management and our Drs who now have their hands tied behind their backs. This is America, stop the torture!!
