My wife is suffering from multiple herniated disc's and scoliosis with an s curve up to 40 degrees. Her degree of pain and range of motion are unbearable. Her quality of life is restricted to laying on a heat pad, sitting on the edge of the bed for 15 to 30 minutes then back on her heating pad. She has a heavy head and cannot hold her head up for long periods of time. Her neck brace is ineffective and the pressure it causes on the back of her neck is unbearable, therefore she can't wear it. She cannot sleep more than 1 to hours without being woken up from the pain. She takes over the counter sleep medication which gives her some opportunity to sleep.

She is on 45 milligrams of Tylenol 3 with coding and Esguc for her pain.

It is simply not enough. The maximum dose of Tylenol 3 with coding is 90 milligrams but her doctor refuse to increase her dosage do to fear of punishment from the CDC.

This doctor has witnessed his peers be totally stripped of their licenses and ruined financially.

My wife is losing hope and I'm watching her slowly fade away. It is infuriating to me that she can't get proper medication prescribed by her doctor because of the CDC's policies. She is dying before my eyes and no one cares. The advocates that recognize this and present their arguments to the CDC are being ignored.

The CDC guidelines are inhumane and millions of regular people are suffering as a result.

Please listen. Overturn the restrictions and let regular doctor and the medical community do their jobs.

We the people and their family are suffering beyond belief.

Please help.

Thank you
