The CDC 2016 Guidelines have been a catastrophe in the USA medical field and need must be retracted. Many states now have "one-size-fits-all" laws which discount individual physiology and cap the maximum dose of Rx opioids at 90 MME or even less. No state seems to be paying attention to any subsequent revision of the CDC 2016 Guidelines and some states have stated outright that they will ignore the revisions. Patients with pain are now being smeared, gaslit, and ignored. Patients with untreated pain are now committing suicide or risking the illicit street supply. The CDC 2016 Guidelines must be retracted.
