Investigation Results

* Acute hemolytic transfusion reaction (AHTR)
 Immune Antibody: _____ Non-immune (specify) _____

***Case Definition**
Check the following that occurred during, or within 24 hours of cessation of transfusion with *new* onset:
 Back/flank pain Chills/rigors Epistaxis Disseminated intravascular coagulation (DIC)
 Oliguria/anuria Hypotension Fever Hematuria (gross visual hemolysis)
 Pain and/or oozing at IV site Renal failure

Check all that apply: Decreased fibrinogen Decreased haptoglobin Elevated bilirubin
 Elevated LDH Hemoglobinemia Hemoglobinuria Plasma discoloration c/w hemolysis
 Spherocytes on blood film Positive direct antiglobulin test (DAT) for anti-IgG or anti-C3
 Positive elution test with alloantibody present on the transfused red blood cells
 Serologic testing is negative, and physical cause (e.g., thermal, osmotic, mechanical, chemical) is confirmed.
 Physical cause is excluded but serologic evidence is not sufficient to meet definitive criteria.
 Physical cause is suspected and serologic testing is negative.
 AHTR is suspected, but symptoms, test results, and/or information are not sufficient to confirm reaction.

|---|---|
| <input type="checkbox"/> No treatment required | <input type="checkbox"/> Symptomatic treatment only |
| <input type="checkbox"/> Hospitalization, including prolonged hospitalization | <input type="checkbox"/> Life-threatening reaction |

| | <input type="checkbox"/> Unknown or not stated |

***Imputability**

Which best describes the relationship between the transfusion and the reaction?

- ABO or other allotypic RBC antigen incompatibility is known.
- Only transfusion-related (i.e., immune or non-immune) cause of acute hemolysis is present.
- There are other potential causes present that could explain acute hemolysis, but transfusion is the most likely cause.
- Other causes of acute hemolysis are more likely, but transfusion cannot be ruled out.
- Evidence is clearly in favor of a cause other than the transfusion, but transfusion cannot be excluded.
- There is conclusive evidence beyond reasonable doubt of a cause other than the transfusion.
- The relationship between the adverse reaction and the transfusion is unknown or not stated.

Did the transfusion occur at your facility? YES NO

Module-generated Designations

NOTE: Designations for case definition, severity, and imputability will be automatically assigned in the NHSN application based on responses in the corresponding investigation results section above.
