

Child Strength Study for Product Safety

We need your help!

University of Michigan researchers are seeking **volunteers age 3 - 36 months** to participate in a study measuring child strength. The data collected from this study will be used to develop safety standards for products children use.

What is involved?

- We will measure and record your child's body dimensions such as weight and shape
- We will record three-dimensional video of your child playing with handles that look like toys that measure types of strength such as
 - squeezing with their fingers
 - pulling and pushing with their hands
 - pushing with their feet

Participants will receive \$50 for up to two hours of participation.
