

WISEWOMAN Summary Exhibits Displaying Minor Changes

March 12, 2025

Background and Rationale

- The current dataset consists of 71 minimum data elements (MDE) that address CVD risk factors such as elevated blood cholesterol, high blood pressure, obesity, diabetes, smoking, sedentary lifestyle, client demographics and behaviors, and social services and support, which are incorporated into the client's health department electronic health record. Information is collected by providers at the time of enrollment and at follow-up assessment and reassessment (a minimum of 11 months post-enrollment). The information reported to CDC is used to evaluate the effectiveness and outcomes of WISEWOMAN services and programs. By deleting two data elements and adding two data elements, adding a response option, and adopting the 2024 OMB Statistical Policy Directive 15 to replace the existing race questions. These changes align with the current purpose and scope of existing WISEWOMAN data elements and the number of data elements remain at 71. Overall, these changes to MDEs will improve data quality by provide companion data to existing data elements to provide a more complete picture for underserved women in the WISEWOMAN Program and Program fidelity by mitigating barriers that are preventing active participation in the WISEWOMAN program. The overall change in burden is non-substantive. In addition to these minor changes to MDEs, CDC is also seeking a three approval for this data collection making this a revision ICR.

- Exhibits
 1. Overview of minor changes to MDEs
 2. Revision of a current MDE Question
 3. Deletion of two current MDE Question
 4. Adding a response options to current MDE

It replaces the old OMB Statistical Policy Directive from 1997 of asking Race and Ethnicity separately. This is an even exchange of 7 response options for 7 response options in Exhibit 2. Data file structure intact.

Exhibit 3. Deletion of Two Current Minimum Data Element Questions

We propose to delete Ethnicity and Race2 by adopting OMB Statistical Policy Directive 15 for race and ethnicity. Deletion is necessary as the new race and ethnicity questions is comprehensive and two Minimum Data Elements that are being deleted would be redundant.

Exhibit 5. Adding 2 Minimums Data Element Questions

We propose to add two questions related to assess participant physical and emotional safety. These two companion questions have been taken from the well-known PRAPARE Screening Tool and will complement the analysis of current social services minimum data elements and increase opportunities to participate in healthy behavior support services which the hallmark of the WISEWOMAN Program.
