

## Medicare Advantage Dental Validation Report Layout

The Medicare Advantage (MA) Dental Validation Report generates once an MA Dental file is accepted at the interchange and functional group levels and is returned to the submitter of the data. The source data within this report is extracted from the ASC X12 Standards for Electronic Data Interchange Technical Report Type 3; Health Care Claim: Dental (837), Acknowledgement (277), and the Customer Service Front End System (CSFES). The Errored Segment and Error Code fields will only appear in this report when an error has occurred. An ICN will not be returned when the encounter is rejected.

The following layout provides the MA Dental Validation Report field name, the source location, and the field name within the source location. The *Comments* column provides additional information when the data presented within the report is generated by the CSFES.
