

Administration for Children and Families Generic for Engagement Efforts

**OMB Information Collection Request
0970 - NEW**

Supporting Statement

Part B

Updated February 2025

Submitted By:
Administration for Children and Families
U.S. Department of Health and Human Services
330 C Street, SW
Washington, DC 20201

B1. Respondent Universe and Sampling Methods

Given the nature of the information collection activities under this request, the universe and respondent selection will vary considerably. However, for the most part, information collections undertaken as part of this clearance will involve purposive samples with respondents selected either to cover a broad range of groups or to include specific characteristics related to the topic of the study. Respondents could include current or prospective service providers, T/TA providers, grant recipients, contractors, current and potential participants in ACF programs or other comparable groups and others experienced with ACF or similar programs, experts in fields pertaining to ACF programs, other key groups involved in ACF projects and programs, individuals engaged in program re-design or demonstration development for evaluation, state or local government officials, or others involved in or prospectively involved in ACF programs.

Individual generic information collections (GenICs) will provide ACF with a streamlined mechanism to gather information from individuals with a range of experiences and perspectives to inform ACF policies and programs. Information collected will inform a variety of efforts and activities such as the improvement, planning, and implementation of research studies, program changes, development and dissemination of resources and products developed under ACF studies, regulatory activities, guidance, outreach and/or training activities.

ACF does not, at this time, anticipate undertaking a statistically sophisticated strategy for respondent selection. A description of the plans for selecting respondents will be provided to OMB as part of each individual GenIC request. If no statistical methods and analyses are planned or appropriate for the type of collection, only a Supporting Statement A will be included with an individual request.

B2. Procedures for Collection of Information

Under this clearance, ACF will use a variety of methodological approaches. The exact data collection methods and the samples for each GenIC will depend on the project. The particular samples will vary based on the content of the discussion and the programs or policies of interest.

Each GenIC request will provide specific information about data collection procedures for the individual information collection. We expect these formative studies will collect data using methodologies such as:

- **Semi-structured discussions or conference calls**
- **Focus groups**
- **Telephone or in-person interviews**
- **Questionnaires/Surveys**
- **Roundtable and/or Breakout Sessions**
- **Open-ended requests**
- **Contextualization of Existing Data**

B3. Methods to Maximize Response Rates and Deal with Nonresponse

Expected Response Rates

Expected response rates will vary for individual information collection requests. Information about expected response rates will be provided with each GenIC request.

Maximizing Response Rates and Dealing with Nonresponse

In general, callbacks will be used to maximize response rates for telephone surveys and interviews; reminder phone calls, letters, emails and/or second questionnaires are some methods that will be used to maximize response rates in mail and web-based surveys. Reminder phone calls, letters, and/or emails to participants are some methods that will be used to encourage them to keep their appointments. Each GenIC request will provide specific information about methods to maximize response rates and deal with nonresponse.

B4. Tests of Procedures or Methods to be Undertaken

When necessary, potential instruments will be pre-tested with 9 or fewer individuals. Results from these pre-tests will be incorporated into any final instruments prior to submission to OMB. If, based on experiences during data collection, we identify necessary changes to procedures or methods, we will submit a change request with all updated materials to OMB for review. When applicable, specific information about any pre-testing will be included in GenIC requests.

B5. Individuals Consulted on Statistical Aspects and Individuals Collecting and/or Analyzing Data

Advice on statistical aspects of each individual data collection will be sought, as appropriate, as the data collection is developed. Depending on the nature of the collection, ACF staff and contractors will have responsibility for data collection and analysis. Additional information about consultation and contact information will be provided to OMB within each Gen IC justification package.
