If you had any work-related deaths in 2024, please tell us on the line below where you assigned/classified each death within the list of items (M1) through (M6) provided under *Injury and Illness Types* above (e.g., "fatal case was due to injury resulting from fall" or "death resulted from respiratory conditions")

Steps to estimate annual average number of employees for 2024:

Step 1:

To calculate the annual average number of employees your establishment paid during 2024, you must calculate the total number of employees your establishment paid for all periods. Add the number of employees your establishment paid in every pay per Calendar Year 2024. Count all employees that you paid during the year and include full-time, part-time, tempo salaried, and hourly workers. Note that pay periods con weekly, bi-weekly, etc.

Example:

Example:

Acme would round 32.67 to 33.

Acme Construction paid its employees in 12 pay periods during 2024:

of employees your establishment paid for all periods. Add the number of employees your establishment paid in every pay period during Calendar Year 2024. Count all employees that you paid at any time during the year and include full-time, part-time, temporary, seasonal, salaried, and hourly workers. Note that pay periods could be monthly, weekly, bi-weekly, etc.	Pay Period 1 2 3 4 5 6 7 8 9 10 11 12	Number of Employees PaidPer Pay Period300353737404342373530+26392 (total number of employees paid over all pay periods)			
Step 2:	 <i>Example:</i>				
Divide the total number of employees (from Step 1) by the number of pay periods your establishment had in 2024. Be sure to count any pay periods when you had no (zero) employees.	Acme Construction had 12 pay periods and paid a total of 392 employees during these pay periods. 392 divided by 12 = 32.67				

Step 3:

Round the answer you computed in Step 2 to the next highest whole number. Write that number in the box for Section 1, Question 2 on the previous page.

Steps to estimate total hours worked by all employees for 2024:

Step 1: Determine the number of full-time employees at your establishment.	<i>Example:</i> Of Acme's 33 employees in 2024, 28 were full-time.				
Step 2: Determine the number of hours generally worked by a full-time employee for a year. Multiply the number of full-time employees you calculated in Step 1 by this number. This total number of full-time hours worked should exclude vacation, sick leave, holidays, and any other non-work time.	Example: Each of Acme's 28 full-time employees worked an average of 2,000 hours per year after excluding vacation, sick leave, holidays, and other non-work time. This works out to 40 hours per week for 50 weeks of the year. 28 full-time employees 28 full-time employees X 2,000 hours per year 56,000 total full-time hours				
Step 3:Determine the number of hours of overtime worked by your full-time employees.Determine the number of regular hours worked by your non-full-time employees. (Non-full-time employees include part-time, seasonal, and temporary employees.)Add these numbers to the number you calculated in Step 2 above. This is the estimated number of hours worked by all of your employees, full- time and non-full-time, during 2024. Write this number in Section 1, Question 3 on the previous page.	Example: Acme's 28 full-time employees worked a total of 2,800 hours of overtime during 2024 and 56,000 regular hours. Acme's 5 part-time employees worked a total of 2,716 hours during 2024. 56,000 full-time hours from Step 2 2,800 over time hours + 2,716 part-time hours 61,516 total hours worked

- 2. If you had cases with days away from work (Column H) or cases with days of job transfer or restriction (Column I), please complete Section 3. To identify the individual cases to report, follow these steps:
