(CAS# 108-88-3) Toluene
Please select the applicable activities for this chemical (i.e., manufacture, process, or otherwise use). For each activity, specify how the chemical was used by choosing the appropriate buttons and checkboxes.
For categories that contain specific uses, select the corresponding sub-use codes to describe the activity in more detail. For example, if you select "processed as a reactant," you will be asked to choose from five sub-use codes. If you produced and/or imported the chemical during the reporting year, you must indicate why.
3.1 Manufacture
Did your facility manufacture this chemical in Reporting Year 2021?
Yes: No:
3.2 Process
Did your facility process this chemical in Reporting Year 2021?
Yes: No:
3.3 Otherwise Use
Did your facility otherwise use this chemical in Reporting Year 2021?
Yes: No:
4. Max On-Site
Need Reporting Help?
Select the code below that indicates the maximum quantity of the chemical (e.g., in storage tanks, process vessels, on-site shipping containers, or in wastes generated) at your facility at any time during the calendar year, in pounds. (When reporting for the dioxin and dioxin-like compounds category, note the weight range is in grams.) This quantity consists of the total amount of the chemical on-site at any one time, not simply the amount manufactured, processed, or otherwise used. The facility must aggregate all quantities of the chemical to determine the maximum total amount present at the entire facility at any time.

Section 7A: On-site Waste Treatment Methods and Efficiency
Need Reporting Help?
If waste streams containing the toxic chemical do not undergo any on-site treatment, click the "Not Applicable" check box below.
Not Applicable
Please enter information on the types of waste treatment methods applied on-site to waste streams that contain the TRI chemical. You must first create a list of applicable waste stream "profile(s)" that describe the type of waste stream containing the TRI chemical and the sequence of treatment methods that are applied to it. Click on New Profile to add a new waste stream profile.
Once you have created one or more waste stream profiles you can select them from the list provided and click Add. To complete the row, you will need to select a waste treatment efficiency range code.
Note: You can re-order your waste treatment methods by clicking and dragging.
New Profile
Section 7B: On-site Energy Recovery Methods and Quantity
Need Reporting Help?
If you did not have on-site energy recovery applied to any waste stream containing the TRI chemical, click the "Not Applicable" check box below.
Not Applicable
If you did apply an energy recovery method to this chemical, enter the quantity burned for energy recovery on-site during the reporting year and select up to 3 energy recovery method codes from the lists below.
Quantity Used for Energy Recovery On-site (lbs):

Section 7C: On-site Recycling Methods and Quantity
Need Reporting Help?
If you did not have on-site recycling applied to any waste stream containing the TRI chemical, click the "Not Applicable" box below.
Not Applicable
If you did recycle this chemical, enter the quantity recycled on-site and select up to 2 recycling method codes from the lists below.
If chemicals are directly reused without any intervening reclamation or recovery steps, they are not considered recycled for TRI reporting purposes. Reclamation or recovery does not include simple phase changing of the chemical before further reuse (e.g., simple remelting of scrap metal). Changing the relative amounts of the chemicals in an alloy (which may occur when mixed scrap metal is melted together) constitutes a reclamation step and is considered recycling. Removing chemicals or removing contaminants from the chemical after it has been used and can no longer be reused for its intended purpose without reclamation is considered recycling. See the Interpretations of Waste Management Activities guidance for more information.

Need Reporting Help?
RY 2021
SG TEST - 2000WSGTST12PEN
(CAS# 108-88-3) Toluene
In RY 2021, did your facility release or dispose of this chemical or transfer this chemical off-site due to: (1) remedial actions; (2) catastrophic events such as earthquakes, fires, or floods; or (3) other one-time events not associated with normal or routine production processes?
Yes:
No:
Your reported values for on-site release and disposal and off-site transfers are provided below. Provide the amount of each of the reported values that was a result of remediation activities, catastrophic events, or one-time events that were not associated with normal or routine production processes. If a release or transfer listed below was not the result of one of these events, you should report zero for that row. Use the form below to edit the data used by the calculator, if necessary. If applicable, select a rounding value from the Rounding dropdown. Note that while Rounding is permitted, EPA recommends using the value as calculated in order to avoid confusion and any apparent internal inconsistency in your submission.
Release or Other Waste Management Description

Total for Reporting (lbs):
Below you may provide optional information on your non-production related reporting for this chemical. Information provided below will go into Section 9.1 (Miscellaneous Information). If you elect to provide information, EPA recommends that you provide description(s) and the date(s) of the events along with any other pertinent information. Some examples of information you may wish to submit are: indicate whether the quantities reported stem from remedial actions or catastrophic events, provide the cause of the release and the equipment involved, mention any explosion or fire associated with a catastrophic event, and/or list other agencies that may have been involved in the management of the chemical due to the event. Non-production related impacts specific to COVID-19 may be indicated here (e.g., a facility shut-down was required due to COVID-19, and certain waste management activities were necessary to shut-down). Any production-related waste management activities, including those in which production operations or quantities were changed due to COVID-19, must continue to be reported in the appropriate part of Sections 8.1-8.7.
One-time or Intermittent Events (Non-Production Related Releases):
[Please provide optional detailed information about your non-production related reporting for this chemical. Information provided here will appear in Section 9.1.]

Need Reporting Help?
RY 2021
SG TEST - 2000WSGTST12PEN
(CAS# 108-88-3) Toluene
Use this section to enter a production or activity ratio. This is a ratio comparing current and prior year values for the variable(s) that best reflect the output or outcome of the process(es) in which the EPCRA Section 313 chemical is involved. This ratio puts year-to-year changes in quantities released and managed as waste into the context of production (i.e., have releases increased more than production increased?).
Not Applicable
Select Metric:
Production Ratio
Activity Ratio
You may include optional info on production or activity variable(s) used to calculate this ratio. Information provided below will go into Section 9.1 (Miscellaneous Information).
Production or Activity Variable(s)
[Please provide optional detailed information on production or activity variable(s) used to calculate ratio (e.g., the variable used to calculate production ratio is: refrigerators produced). Information provided here will appear in Section 9.1.]

Source Reduction Activities and Methods
Need Reporting Help?
NEW
Please indicate any source reduction activities involving the chemical that your facility initiated during the reporting year by selecting the applicable code(s). Source reduction activities are practices that reduce or eliminate the creation of chemical waste. Examples include modifying the content, grade, or purity of raw materials or implementing a new technology or technique.
For each reported activity, select the code(s) indicating the method(s) you used to identify each source reduction activity. Use the comment box below each selected code to provide additional information on the activity and/or the method used to identify the activity. You may also specify the expected annual reduction resulting from the activity.
Select this checkbox if you're interested in sharing more information with EPA about source reduction activities. This may inform technical assistance opportunities, knowledge transfer, or highlighting of best practices.
Activity 1
Please select one Source Reduction Activity code, the method(s) used to identify the source reduction activity, and the estimated annual reduction resulting from the activity.

SG TEST - 2000WSGTST12PEN
(CAS# 108-88-3) Toluene
If you wish, enter additional optional information on source reduction, recycling, energy recovery, treatment, or other pollution prevention activities. Previously reported information is shown in the corresponding topic. Edit any previously reported text or click any of the checkboxes to provide additional details. Submitting pollution prevention information is an opportunity to publicly highlight the steps your facility has taken to reduce the amount of toxic chemicals entering the environment. Do not enter information unrelated to pollution prevention in this section.
Source Reduction:
Source Reduction
Barriers to Source Reduction
Waste Management:
Recycling
