Comment from Moore, Madeline (ID APHIS-2024-0053-0006)

Posted by the Animal and Plant Health Inspection Service on Dec 10, 2024

Keeping this simple, predators that were released by the federal government who are non native and native need to be managed. Wolves and grizzly bears as a prime example. Management is only going to come from proper studies and employees on the ground working with land managers, ranchers, hunters and other wildlife professionals.

Support should be mandatory for predator management and the APHIS staff from the federal government.
