Lets face it there are to many predators for the ecosystem to handle. We need to reduce the numbers to get more in balance with what the land can support. We need more depredation hunts on predators and more trapping opportunities. It is difficult to document every kill in a timely manner and the environmental community knew this would be the case. We need to pay the producer be it cattle or sheep for attacks even if it does not kill the animal. Over all the agency is doing what they can with the resources available.
