NVDRS Web-based Data Entry (Sample Screenshots of System)

Introduction

This document displays the screens that abstractors used to enter required data elements. The variable name associated with each data entry field is provided to help user interpret and analyze data. Any new variables on the righthand side are flagged in red with additional numbers, and the corresponding variable names given below.

- I. **Landing Page:** *Displays once securely logged on to Secure Access Managemt Services (SAMS) and granted entry into the application.*

The screenshot displays the NVDRS (National Violent Death Reporting System) web-based data entry landing page. The page features the CDC logo and text: "Centers for Disease Control and Prevention CDC 24/7: Saving Lives. Protecting People™". The top navigation bar includes links for Home, Incidents, Reporting, Settings, Help, About, Log Out, and a user profile for SCOTT VAN HEEST (CDC Administrator). A search bar for Incident ID's is also present. Below the navigation bar, there is an "Announcements" section with a scrollable list of updates, including a version update to 2.1 on December 13, 2019, and contact information for the software help desk. A row of buttons provides quick access to Search Incidents, Reporting, Export Incidents, Manage Import Queue, Bulk Delete Incidents, and Dashboard. The "Form Approved" section lists the OMB control numbers and expiration dates for the National Violent Death Reporting System (NVDRS) and the State Unintentional Drug Overdose Reporting System (SUDORS). A public reporting burden statement is also included. The footer contains a comprehensive list of links (Home, A-Z Index, Site Map, Policies, About CDC.gov, Link to Us, All Languages, CDC Mobile, Contact CDC, Security Statement) and contact information for the CDC, along with the USA.gov logo.

Announcements

NVDRS Web was updated to Version 2.1 on December 13, 2019.

Please let us know of any difficulties by emailing the software help desk at NVDRS-Software@cdc.gov

If you bookmarked the old address for the NVDRS Web software, please update your bookmark to <https://nvdrs.cdc.gov>

Search Incidents Reporting Export Incidents Manage Import Queue Bulk Delete Incidents Dashboard

Form Approved

National Violent Death Reporting System (NVDRS):
OMB No. 0920-0607
Exp. Date: 11/30/2020

State Unintentional Drug Overdose Reporting System (SUDORS):
OMB No. 0920-1128
Exp. Date: 11/30/2020

Public reporting burden of this collection of information is estimated to average 2 hours and 30 minutes per case report, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. An agency may not conduct or sponsor, and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden to CDC/ATSDR Information Clearance Officer, 1600 Clifton Road NE, MS D-24, Atlanta, Georgia, 30333; ATTN: PRA (0920-0449)

VIII. Circumstances: *Mental, Health, Substance Abuse, and Other Addiction & Relationship and Life Stressors*

CIRCUMSTANCE VARIABLE NAMES BY DATA SOURCE (CME AND LE)

Variables abstracted from both the CME and the LE reports are exported into two variables. If the CME report is the source, the variable name is preceded by "CME_" (e.g., "CME_VariableName"). If the LE report is the source, the variable name is preceded by "LE_" (e.g., "LE_VariableName"). For instance, information on the "Argument" variable will be stored in "CME_Argument" and "LE_Argument"

CRISIS VARIABLE NAMES

Whether a circumstance was a crisis (i.e., checking the "LE Crisis" or "CME Crisis" checkbox) is stored in a separate variable from the circumstance in the export file. Specifically, crisis variables will have the word "crisis" inserted between the data source (i.e., LE and CME) and the circumstance name in the variable label variable (e.g., CME_CrisisVariableName, LE_CrisisVariableName). For example, the crisis variables for "Stalking" will be CME_CrisisStalking and LE_CrisisStalking.

XVI. Toxicology Templates: new addition to the software

There is now a “templates” feature that may assist in entering tox data that comes to abstractors in standardized formats. State administrators can create toxicology templates, and then abstractors can add a template to a victim record by clicking the “apply template” button on the toxicology tab.

XXI. Import Page: Available to states to import information from death certificates, including ICD-10 and Coroner/Medical Examiner records. One new option added, the ability to identify the incident types for casing being imported.

XXIII. Incident Validation: *this is a new addition to the software*

The new software architecture has allowed us to pull together all of the validation rules on the various data elements into a single screen. Now, you can click the “validate” button next to the “save” button and receive a report on all validation rules for the incident, like this:

The screenshot shows a window titled "MP 2018 Incident: 2 (Validations)". Inside, there is a table with the following columns: Object, Location, Severity, Error Number, and Error Message. The table contains four rows of data. The first row is highlighted in yellow and represents a warning. The subsequent three rows are highlighted in purple and represent quality errors. Below the table, there is a note stating that validation messages are based on the last saved version of the incident. At the bottom right, there are two buttons: "Export to CSV" and "OK".

Object	Location	Severity	Error Number	Error Message
Victim #1	Injury & Death	WARNING	W030	Except for legal intervention, the abstractor assigned manner of death must match the manner of death on the LE, CME, or DC. Please check this incident to ensure this is true.
Victim #1	Demographics	QUALITY	Q009	Person type is missing. Enter the correct value for person type.
Victim #1	Demographics	QUALITY	Q011	Sex is missing. Enter the correct value for sex (enter 9 'Unknown' if sex is missing or not listed).
Victim #1	Injury & Death	QUALITY	Q013	Manner of death per abstractor is suicide but Age unit is not years. Suicides should always have Age unit=1 ('Years') so change Age unit to 1 or if missing to 9 ('Missing') OR if incident is not a suicide change manner of death per abstractor to correct value.

Validation messages are based on the last saved version of the incident. If you have made changes to the incident, be sure to SAVE before running validation.

Export to CSV OK

In addition to the errors and warnings that have always been in the software, we have added about two dozen “data quality checks” that we have been running in SAS as part of the data closeout process. We plan to add more checks in the future.

XXIV. Related Incidents: this is a new addition to the software

We have added a panel to the Incident screen that allows users to create links between incidents. Each link has a description field and allows users to click through to see the related incident. The panel looks like this:

	Year	Incident	Relation
  	2017	5	Note on relationship goes here

States will have a lot of freedom in determining what constitutes a “related” incident in NVDRS. Related incidents might include multiple homicides taking place outside of our 24-hour case definition criterion, unintentional drug overdoses with related suicides or homicides, and so on. In the future, we may add a drop down with relationship categories, based on how this feature is used in practice.

XXV. Overdose Module: An optional module added to NVDRS web-based system for the State Unintentional Drug Overdose Reporting System (SUDORS). The existence of NVDRS and its web-system made rapid scale-up of SUDORS to respond to the increase in overdose deaths possible. NVDRS does not collect these data elements.
