

A SURVEY THAT CAN HELP YOUR BOTTOM LINE

It's not just another survey. It's an investment in protecting the soil, water and habitat we all depend on. Participate in the CEAP survey and help determine the most effective conservation practices for your community. In turn, help maintain the very conservation programs that impact your bottom line.

The 2013 National Resources Inventory (NRI) – Conservation Effects Assessment Project (CEAP) survey collects information from farmers and ranchers about conservation practices and farming on cultivated and non-cultivated cropland. This year representatives from USDA's National Agricultural Statistics Service will visit farms from September 2013 – February 2014 to conduct the survey. Be confident that your information will be kept confidential by law.
