Attachment 6d: Water Collection Protocol

Form Approved
OMB No. 0920-0950
Exp. Date XX/XX/20XX

Notice – CDC estimates the average public reporting burden for this collection of information as 10 minutes per response, including the time for reviewing instructions, searching existing data/information sources, gathering and maintaining the data/information needed, and completing and reviewing the collection of information. An agency may not conduct or sponsor, and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden to CDC/ATSDR Information Collection Review Office, 1600 Clifton Road, MS H21-8, Atlanta, GA 30333; ATTN: PRA (0920-0950).

Assurance of Confidentiality – We take your privacy very seriously. All information that relates to or describes identifiable characteristics of individuals, a practice, or an establishment will be used only for statistical purposes. NCHS staff, contractors, and agents will not disclose or release responses in identifiable form without the consent of the individual or establishment in accordance with section 308(d) of the Public Health Service Act (42 U.S.C. 242m(d)) and the Confidential Information Protection and Statistical Efficiency Act or CIPSEA (44 U.S.C. 3561-3583). In accordance with CIPSEA, every NCHS employee, contractor, and agent has taken an oath and is subject to a jail term of up to five years, a fine of up to \$250,000, or both if he or she willfully discloses ANY identifiable information about you. In addition to the above cited laws, NCHS complies with the Federal Cybersecurity Enhancement Act of 2015 (6 U.S.C. §§ 151 and 151 note) which protects Federal information systems from cybersecurity risks by screening their networks.

NHANES is studying the water used in people's homes for fluoride. I would like to collect about an ounce of tap water for our study. May I please collect a water sample from the water source you use for drinking and cooking? 1. YES 2. NO	
SPANISH	NHANES estudia el agua que se usa en los hogares para detectar la presencia de fluoruro. Quisiera recolectar aproximadamente una onza de agua de la llave para nuestro estudio. ¿Podría recolectar una muestra de agua de donde obtiene agua para beber y cocinar? 1. YES 2. NO
QUESTION TYPE	Radio button
FILLS	
NOTES	
HELP SCREEN (ENG)	NHANES collects water to test for fluoride levels. The proper amount of fluoride helps prevent and control tooth decay in children and adults. Potential sources of fluoride exposure include: • Toothpaste, • Drinking water in fluorinated communities, • Beverages and food processed with fluorinated water, • Dietary prescription supplements that include fluoride (e.g., tablets or drops), and • Other professional dental products such as mouth rinses, gels, and foams. In the U.S., water can provide approximately 75% of a person's fluoride intake. The purpose of the NHANES fluoride study is to determine the fluoride concentration in households' primary water consumption source.
HELP SCREEN (SPA)	NHANES recolecta agua para revisar los niveles de fluoruro. La cantidad adecuada de fluoruro ayuda a prevenir y controlar las caries dentales en niños y adultos. Fuentes posibles donde las personas se exponen al fluoruro incluyen: • pasta dental; • agua potable en comunidades con agua fluorada; • bebidas y comidas procesadas con agua fluorada; suplementos alimenticios de venta con receta que incluyen fluoruro (por ejemplo, comprimidos o gotas); y • otros productos dentales profesionales como enjuagues bucales, geles y espumas. En Estados Unidos, el agua puede proporcionar alrededor del 75 % de la cantidad de fluoruro que una persona toma. El objetivo del estudio sobre el fluoruro de NHANES es determinar la concentración de fluoruro en la principal fuente de consumo de agua de

	los hogares.

Water Collection Instructions

Interviewer: Must collect the water sample yourself:

1. Ask respondent to identify the faucet or tap water dispenser used most for drinking and cooking.

If the household uses one tap source for drinking and a different tap source for cooking, choose the **drinking** source for collection.

If only bottled water is used for cooking and drinking, still take a tap water sample from a faucet in the home. Do *not* take a water sample from bottled water. ***All samples must be tap water.***

2. Turn on the water.
3. Let the water run for 10-15 seconds. (The first water out of the faucet or tap dispenser may have higher amounts of fluoride due to evaporation). Use the 32-ounce water container as needed to avoid spillage from the refrigerator.
4. Remove the tube from the plastic bag and take the cap off the tube. Carefully fill the tube to the 25 mL line with water.
5. Turn the water off.
6. Screw the cap tightly on the tube. Turn the tube upside down to make sure it does not leak. If the tube does leak, then remove the cap and try tightening the cap again. Be sure the tube is filled to the 25 mL line with water.

PRESS NEXT TO CONTINUE.

SPANISH	Instrucciones para la recolección de agua Interviewer: <u>I Must collect the water sample yourself:</u> 7. Pida al/a la participante que identifique la llave o el dispensador de agua que más usa para beber y cocinar. Si en el hogar se usa una llave para beber y otra llave diferente para cocinar, elija el dispositivo de agua que se usa para beber en el momento de obtener la muestra. Si solo se usa agua embotellada para cocinar y beber, tome igualmente una muestra de agua de una llave del hogar. <i>No</i> tome una muestra de agua embotellada. <i>Todas las muestras <u>deben</u> ser de agua de la llave.</i> 8. Abra la llave. 9. Deje correr el agua durante 10 a 15 segundos (el primer chorro de agua que sale de la llave o del dispensador podría tener mayores cantidades de fluoruro debido a la evaporación). Use el recipiente de agua de 32 onzas de ser necesario para evitar derrames del refrigerador. 10. Saque el tubo de la bolsa de plástico y quítele la tapa. Llene con cuidado el tubo con agua hasta la marca de 25 ml. 11. Cierre la llave del agua. 12. Cierre bien la tapa del tubo. Dé vuelta el tubo para asegurarse de que no gotee. Si el tubo gotea, retire la tapa y vuelva a intentar cerrarla bien. Asegúrese de que el tubo se haya llenado hasta la marca de 25 ml. PRESS NEXT TO CONTINUE.
