

Networks, Processors, and Issuers Payments Surveys (NPIPS)

Survey Period:
Calendar Year 2024

TABLE OF CONTENTS

General-Purpose Credit Card Network (CY2024_A_GPCCN)
Private-Label Credit Card Merchant Issuer (CY2024_B_PLCCI)
Private-Label Credit Card Processor (CY2024_C_PLCCP)
General-Purpose Debit Card Network (CY2024_D_GPDCN)
General-Purpose Prepaid Card Network (CY2024_E_GPCCN)
Automated Teller Machine Card Network (CY2024_F_ATMCN)
General-Purpose Prepaid card Processor (CY2024_G_GPPCP)
Electronic Benefits Transfer Card Processor (CY2024_H_EBT)
Private-Label Prepaid Card Issuer and Processor (CY2024_J_PLPC)
P2P and Money Transfer Processor (CY2024_K_P2PMT)
Online Bill Payment Processor (CY2024_L_OLBP)
Walk-In Bill Payment Processor (CY2024_M_WIBP)
Private-Label ACH Debit Card Processor (CY2024_N_PLACHDC)
Online Payment Method Processor (CY2024_P_OLPM)
Mobile Wallet Processor (CY2024_Q_MW)

The Federal Reserve Payments Study

General-Purpose Credit Card Network Payment Survey

Survey Period:
Calendar Year 2024

Responding to this collection is voluntary. The Federal Reserve may not conduct or sponsor, and an organization is not required to respond to, a collection of information unless it displays a currently valid OMB control number. Public reporting burden for this collection of information is estimated to be an average of 8 hours per response, including the time to gather and maintain data in the required form, to review the instructions and to complete the information collection. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to: Secretary, Board of Governors of the Federal Reserve System, 20th and C Streets, NW, Washington, DC 20551; and to the Office of Management and Budget, Paperwork Reduction Project (7100-0351), Washington, DC 20503.

Networks, Processors, and Issuers Payments Surveys (NPIPS)

General-Purpose Credit Card Network Payment Survey

Instructions

About this survey

This survey, part of the NPIPS, covers general-purpose credit card network transactions for calendar year 2024 (CY2024). Allocations of transactions are requested for several category types, including transactions classified as fraudulent by an unauthorized third party. Counts of the number of active and total cards (including both physical and virtual cards) carrying your organization's network brand that are issued and outstanding are also requested.

About the study

This survey and other NPIPS surveys are part of the Federal Reserve Payments Study (FRPS), which is conducted by the Federal Reserve Bank of Atlanta and the Federal Reserve Board. Your response will be used in combination with peer responses to estimate national aggregate volumes for CY2024. Aggregate results will be compared to those of previous studies to track changes and identify trends in US payments.

Confidentiality

Any data you provide for this survey is strictly confidential. Individual responses to the survey will not be shared with the public or the industry.

Your participation

To achieve the most reliable results, it is important that you respond completely and accurately. **If your organization outsourced payments processing to another organization during CY2024, please request the necessary data from that organization or provide them with the survey so they may respond on behalf of your organization.**

>> Please respond by: June 13, 2025 <<

Data entry

Please enter annual data for CY2024 in the **Annual Data Entry** tab (i.e., worksheet). Please enter quarterly data for items highlighted in orange in the **Quarterly Data Entry** tab. If estimated amounts rather than actual amounts are reported for any item(s), please explain in the comments field at the bottom of the tab. By default, tabs are protected and only cells needed for data entry are unlocked.

1. Direct data entry (light blue boxes). For numeric data, key in the actual number or dollar amount.

Note: Items left blank can be difficult to interpret and may generate follow-up questions. If a positive amount cannot be provided, please consider entering one of these alternatives:
* Enter "0" if the requested item is known to be zero. (This is appropriate for items that are not applicable to your organization.)
* Enter "NR" (not reported/not reportable) if the requested item is known to be nonzero but cannot be reported.

Example

2. Automatic entry of calculations or repeated figures (dark blue box). Cells are protected, but different amounts may be entered into the override cells to the right (yellow box), if necessary. Only positive numeric amounts are valid for override cells.
(Automatic entry cells display "NR" until required information is provided.)

Example

	Override
NR	

3. Option button selection. Click on the button with the option you would like to choose.
(In the example to the right, Option 1 is the default selection.)

Example

☒ Option 1

☐ Option 2

Unexpected condition flags

As you fill out the survey, flags may be raised describing the results of simple arithmetic comparisons. These are intended to help you identify potential mistakes and, if appropriate, correct them. However, it may not always be appropriate to revise data when flags are raised, and you may choose to leave your response data as is. If that happens, please provide feedback and explanations in the comments field at the bottom of each tab. Your comments may help us understand your data and avoid the need for follow up. Conditions that can raise a flag include:

1. **Logical inconsistencies:** These check for essential arithmetical relationships among items based on survey definitions and structure. They include adding-up conditions for items and their sub-items, pairing of zeros with nonzeros, and entry of NR when a known amount is implied by other reported item amounts.
Note: Leaving items blank will not throw flags. However, consistency problems may still exist when the amount is left blank but is implied by other related item amounts. Such cases can be checked by entering NR when an item is not reported/not reportable. If possible, please review your survey workbooks for any blank data-entry cells and replace them before submitting.
2. **Exceeding set boundaries:** These compare against lower and upper boundaries for averages and ratios. The boundaries are intended to allow a wide range, but may not be appropriate for your organization.

Examples

Item in Q3 is not equal to the sum of subitems: Q3 > Q3.a + Q3.b.
Inconsistent pair: Q3 Balance (\$) cannot be 0 if Q3 Number is nonzero.
Item should be reportable if all related items (Q2, Q2.b) are reported.

Example

This average value is unusually low.

Glossary

Definitions for selected terms can be found in the **Glossary** tab.

Submitting the completed survey

Submitted via Intralinks:

Please have your organization's Study Coordinator that established access to an Intralinks account submit this and any other survey workbooks.

To submit your completed survey, log in to your organization's Intralinks account where you will see a folder labeled with a unique numeric identifier assigned to your organization. Within this folder are two subfolders – one for submitting your data and the other for retrieving data that we may send you. Locate the Submit Data folder, and upload your completed survey workbooks on the encrypted Intralinks platform. Once we receive notification of your submission, acknowledgement of receipt will be sent to you from FRPSCommunications@atl.frb.org.

Instructions

Questions?

If you have questions about the survey content or need assistance with the submission process, please contact the Federal Reserve Payments Study team at www.paymentsstudy.com.

Comments

Please provide any feedback and suggestions about the survey or submission process in the box below:

Annual Data Entry

Please report data on general-purpose credit card transactions and related information for calendar year 2024. Responding completely and accurately will help ensure accuracy of the aggregate estimates.

Include:

- * Only credit or charge cards and transactions carrying your organization's network brand
- * All domestic and cross-border transactions associated with US-domiciled credit card accounts
- * Physical or virtual credit or charge cards

Do not include:

- * Original credit transactions (OCTs) or push payment credits
- * Transactions processed by your organization but carrying another organization's network brand
- * Debit card, prepaid card, or private-label (closed loop) transactions
- * Non-network transactions (i.e., convenience checks or balance transfers)
- * Transactions originated from foreign accounts (except for questions 12 and 21)

Please leave no item blank.
*** Enter "0" if an item is zero**
*** Enter "NR" if an item is nonzero but cannot be reported**

Quarterly data are also requested for items shaded orange and should be entered in the separate sheet provided.

Definitions for selected terms can be found in the [Glossary](#) tab.

Calendar year 2024 general-purpose credit card transactions

1	Total transactions	Number	
		Value (\$)	
		Avg. Value (\$)	NR
1.a	Denials (authorization declined)	Number	
		Value (\$)	
		Avg. Value (\$)	NR
	% of total transaction (Number)		NR

Annual Data Entry

5

Among the different subtotals of payment transactions listed above, which would you prefer to use to report more detailed allocations of payment transactions below? If possible, please use 3. *Net, authorized & settled transactions* (the default selection).

Preferred basis for reporting payment transactions

- ☐ 2. Total authorized transactions
- ☒ 3. Net, authorized & settled transactions
- ☐ 4. Net, purchase transactions

Transactions by channel

6

Net, authorized & settled transactions = 6.a + 6.b

Number	NR
Value (\$)	NR
Avg. Value (\$)	NR

6.a

In-person transactions

Transactions the card user initiates by interacting with a physical terminal or other device provided by the merchant or payee, usually with a card or mobile device. Also include card-not-present transactions for which the card user is present at the point of sale (e.g., key-entered transactions). Do not include remote transactions classified as card-present solely because of the level of authentication.

Number	
Value (\$)	
Avg. Value (\$)	NR
% of net, authorized & settled transactions (Number)	NR

6.b

Remote transactions (card user not at merchant location)
= 6.b.1 + 6.b.2 + 6.b.3 + 6.b.4

Transactions for which the card user does not interact with a physical terminal or other device provided by the merchant or payee. Typically, these include card-not-present transactions. Also include any remote transactions classified as card-present solely because of the level of authentication.

Number	
Value (\$)	
Avg. Value (\$)	NR
% of net, authorized & settled transactions (Number)	NR

6.b.1

Mail-order/telephone-order transactions (MOTO)

Remote purchase transactions for which the merchant receives an order through the mail or over the telephone. Card is typically charged at time of shipment or delivery. If possible, please exclude payments on account, e.g., bill pay.

Number	
Value (\$)	
Avg. Value (\$)	NR
% of remote transactions (Number)	NR

6.b.2

Internet purchase transactions (E-commerce)

Purchase transactions for goods and services from a merchant website or mobile app (i.e., M-commerce). May involve varying levels of authentication including the keyed entry of a card number, use of "card on file" information, or redirection to a payment service. Card is typically charged at time of shipment or delivery. If possible, please exclude payments on account, e.g., bill pay.

Number	
Value (\$)	
Avg. Value (\$)	NR
% of remote transactions (Number)	NR

6.b.3

Bill pay: recurring/subscription/installment transactions

Payments of bills or invoices, often on a prearranged basis and may include "card on file", based on an ongoing customer relationship. Also include payments made on a monthly or installment basis. Examples include utility bill payments and multiple payments for a single purchase.

Number	
Value (\$)	
Avg. Value (\$)	NR
% of remote transactions (Number)	NR

6.b.4

Other remote transactions

Transactions that do not belong or do not have identifiers to assign into the remote transaction categories provided above.

Number	
Value (\$)	
Avg. Value (\$)	NR
% of remote transactions (Number)	NR

Please describe any significant transaction types included in the "Other remote transactions" category above:

In-person transactions by authentication method

7

Virtual cards

[22](#)

Please indicate if your organization issued or processed transactions for virtual general-purpose credit or charge cards during calendar year 2024.
A virtual card is a digital representation of a general-purpose credit or charge card that does not exist in physical form. Typically stored in a digital wallet for online, in-app, or in-person purchases with a mobile device (using NFC or barcode scanner). Do not count individual tokenized transactions as virtual cards.

Comments:

General-Purpose Credit Card Network Payment Survey

Glossary

Item	Definition
	United States: The states, territories, and possessions of the US, the District of Columbia, the Commonwealth of Puerto Rico, or any political subdivision of any of the foregoing.
	Virtual cards: A virtual card is a digital representation of a general-purpose credit or charge card that does not exist in physical form. Typically stored in a digital wallet for online, in-app, or in-person purchases with a mobile device (using NFC or barcode scanner). Do not count individual tokenized transactions as virtual cards.
1a	Denials/declines: Transaction attempts that receive a denial response by the host authorization system and do not result in an authorized transaction.
2a	Pre-authorization only: Transactions that are approved but not settled (e.g., the initial amount which a rental agency, hotel, or fuel dispenser operator receives authorization, but final payment and amount transfer is never made).
3	Net, authorized & settled transactions: Transactions initiated by the acquirer that are completed with the final payment amount transferred from the acquirer to the issuer. Such transactions include those that are subsequently reversed through a chargeback, or other adjustment or return.
3a	Cash advances: Transactions involving the provision of cash to the card user via an ATM or over the counter with the use of a credit or charge card, typically authenticated by entering a personal identification number (PIN). (Unlike debit or prepaid card cash-back transactions, cash advances are not combined with a purchase.)
3b.1	Chargebacks: Transactions initiated by the issuer that reverse a transaction, in whole or in part, and transfer value from the acquirer to the issuer (e.g., customer disputes, fraud, processing errors, authorization issues, or non-fulfillment of copy requests). A chargeback provides the issuer with a way to return a disputed transaction, typically on behalf of the cardholder.
3b.2	Other adjustments and returns: Transactions initiated by the acquirer that reverse a transaction, in whole or in part, and transfer value from the acquirer to the issuer (e.g., customer return of goods, complaints, merchant-identified fraud, duplicate transaction entry).
4	Net, purchase transactions: Transactions that have been authorized and settled. Exclude denials, transactions that are pre-authorization only, cash advances, chargebacks, and other adjustments and returns.
7a	Transactions with chip-authentication: In-person transactions for which the account information is taken from a computer microchip embedded in a card or mobile device that securely stores data to be read via contact or contactless/NFC communications with a merchant payment device or terminal. Include EMV and all other types of chip transactions with a card or mobile device. Report only in-person transactions.
7a.1 & 7b.1	Transactions with a PIN: In-person transactions for which a card user enters their Personal Identification Number (PIN) to authenticate the card purchase.
7a.2 & 7b.2	Transactions without a PIN: In-person transactions for which a card user does not enter a Personal Identification Number (PIN) to authenticate the card purchase.

General-Purpose Credit Card Network Payment Survey

Glossary

Item	Definition
7b	Transactions without chip-authentication: In-person transactions for which the account information is not taken from a computer microchip. Typically the information is taken from a magstripe on a card, and may occasionally be manually keyed at the register. Report only in-person transactions.
8a	Contact transactions (chip card inserted or "dipped"): Transactions are initiated by inserting a card with an embedded EMV microchip into a merchant's chip-enabled terminal. The terminal makes contact with the inserted chip for authentication.
8b	Contactless transactions (chip card or mobile device RFID, "tap" or "wave"): Transactions are initiated by tapping a card or a mobile device with an embedded microchip at a merchant's chip-enabled terminal. Contactless transactions typically use Radio Frequency Identification (RFID) and/or a specialized subset of Near-field Communications (NFC) standards to make the connection to the chip for authentication. May include some contactless EMV transactions.
11	Transaction value distribution: Your best estimate for the number and dollar value of transactions that fall within the "dollar size bands" requested.
14a	Lost or stolen card: Fraudulent transactions via a card reported as lost or stolen.
14b	Card issued but not received: Fraudulent transactions reported to be via an intercepted new or replacement card in transit that was activated by someone other than the cardholder.
14c	Fraudulent application: Fraudulent transactions reported to be via a new card that was issued to someone other than the cardholder using falsified information or a stolen identity.
14d	Counterfeit card: Fraudulent in-person transactions via an altered or cloned card.
14e	Fraudulent use of account number: Fraudulent transactions using account number and other card and cardholder details, typically remotely.
14f	Other (including account takeover): All other fraudulent transactions not included in the above categories. In particular, "other" covers account takeover, a form of identity theft whereby an unauthorized party gains access to and use of an existing card account.
23	Total cards: All issued, activated, and unexpired general-purpose credit or charge cards (linked to US-domiciled accounts).
23	Active cards: General-purpose credit or charge cards outstanding with a minimum level of purchase activity according to your organization's definition.
23b	Physical cards: A physical general-purpose credit or charge card with a magstripe and/or chip that is issued to the customer for making purchases in person.

The Federal Reserve Payments Study

Private-Label Credit Card Merchant Issuer Payment Survey

Survey Period:
Calendar Year 2024

Responding to this collection is voluntary. The Federal Reserve may not conduct or sponsor, and an organization is not required to respond to, a collection of information unless it displays a currently valid OMB control number. Public reporting burden for this collection of information is estimated to be an average of 8 hours per response, including the time to gather and maintain data in the required form, to review the instructions and to complete the information collection. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to: Secretary, Board of Governors of the Federal Reserve System, 20th and C Streets, NW, Washington, DC 20551; and to the Office of Management and Budget, Paperwork Reduction Project (7100-0351), Washington, DC 20503.

Networks, Processors, and Issuers Payments Surveys (NPIPS)

Private-Label Credit Card Merchant Issuer Payment Survey

Instructions

About this survey

This survey, part of the NPIPS, covers private-label credit card transactions that your organization processed in-house for calendar year 2024 (CY2024). Allocations of transactions are requested for several category types, including transactions classified as fraudulent by an unauthorized third party. Counts of the number of active and total cards (including both physical and virtual cards) that are issued by your organization and outstanding are also requested.

About the study

This survey and other NPIPS surveys are part of the Federal Reserve Payments Study (FRPS), which is conducted by the Federal Reserve Bank of Atlanta and the Federal Reserve Board. Your response will be used in combination with peer responses to estimate national aggregate volumes for CY2024. Aggregate results will be compared to those of previous studies to track changes and identify trends in US payments.

Confidentiality

Any data you provide for this survey is strictly confidential. Individual responses to the survey will not be shared with the public or the industry.

Your participation

To achieve the most reliable results, it is important that you respond completely and accurately. **If your organization outsourced payments processing to another organization during CY2024, please request the necessary data from that organization or provide them with the survey so they may respond on behalf of your organization.**

>> Please respond by: June 13, 2025 <<

Data entry

Please enter annual data for CY2024 in the **Annual Data Entry** tab (i.e., worksheet). If estimated amounts rather than actual amounts are reported for any item(s), please explain in the comments field at the bottom of the tab. By default, tabs are protected and only cells needed for data entry are unlocked.

1. Direct data entry (light blue boxes). For numeric data, key in the actual number or dollar amount.

Note: Items left blank can be difficult to interpret and may generate follow-up questions. If a positive amount cannot be provided, please consider entering one of these alternatives:
* Enter "0" if the requested item is known to be zero. (This is appropriate for items that are not applicable to your organization.)
* Enter "NR" (not reported/not reportable) if the requested item is known to be nonzero but cannot be reported.
2. Automatic entry of calculations or repeated figures (dark blue box). Cells are protected, but different amounts may be entered into the override cells to the right (yellow box), if necessary. Only positive numeric amounts are valid for override cells.
(Automatic entry cells display "NR" until required information is provided.)
3. Option button selection. Click on the button with the option you would like to choose.
(In the example to the right, Option 1 is the default selection.)

Option 2

Unexpected condition flags

As you fill out the survey, flags may be raised describing the results of simple arithmetic comparisons. These are intended to help you identify potential mistakes and, if appropriate, correct them. However, it may not always be appropriate to revise data when flags are raised, and you may choose to leave your response data as is. If that happens, please provide feedback and explanations in the comments field at the bottom of each tab. Your comments may help us understand your data and avoid the need for follow up. Conditions that can raise a flag include:

1. **Logical inconsistencies:** These check for essential arithmetical relationships among items based on survey definitions and structure. They include adding-up conditions for items and their sub-items, pairing of zeros with nonzeros, and entry of NR when a known amount is implied by other reported item amounts.
Note: Leaving items blank will not throw flags. However, consistency problems may still exist when the amount is left blank but is implied by other related item amounts. Such cases can be checked by entering NR when an item is not reported/not reportable. If possible, please review your survey workbooks for any blank data-entry cells and replace them before submitting.

2. **Exceeding set boundaries:** These compare against lower and upper boundaries for averages and ratios. The boundaries are intended to allow a wide range, but may not be appropriate for your organization.

Examples

Item in Q3 is not equal to the sum of subitems: Q3 > Q3.a + Q3.b.
Inconsistent pair: Q3 Balance (\$) cannot be 0 if Q3 Number is nonzero.
Item should be reportable if all related items (Q2, Q2.b) are reported.

Example

This average value is unusually low.

Glossary

Definitions for selected terms can be found in the **Glossary** tab.

Submitting the completed survey

Submitted via Intralinks:

Please have your organization's Study Coordinator that established access to an Intralinks account submit this and any other survey workbooks.

To submit your completed survey, log in to your organization's Intralinks account where you will see a folder labeled with a unique numeric identifier assigned to your organization. Within this folder are two subfolders – one for submitting your data and the other for retrieving data that we may send you. Locate the Submit Data folder, and upload your completed survey workbooks on the encrypted Intralinks platform. Once we receive notification of your submission, acknowledgement of receipt will be sent to you from FRPSCommunications@atl.frb.org.

Private-Label Credit Card Merchant Issuer Payment Survey
Instructions

Questions?

If you have questions about the survey content or need assistance with the submission process, please contact the Federal Reserve Payments Study team at www.paymentsstudy.com.

Comments

Please provide any feedback and suggestions about the survey or submission process in the box below:

Annual Data Entry

Please report data on private-label credit card transactions and related information for calendar year 2024. Responding completely and accurately will help ensure accuracy of the aggregate estimates.

Include:

- * Only private-label credit cards and transactions that your organization processed in-house
- * Transactions on a closed loop point-of-sale system for use at your retail stores or online establishments
- * All domestic and cross-border transactions associated with US-domiciled credit card accounts
- * Both consumer and business/government card transactions
- * Physical or virtual credit or charge cards

Do not include:

- * Transactions processed over a general-purpose card network (i.e., Visa, MC, Amex, Discover) even if the card is cobranded with your organization
- * Transactions for which your organization was only the receivables owner but not the transaction processor
- * Transactions originated from foreign accounts

Note: We are surveying both in-house and outsourced private-label credit card issuers/processors. This survey covers private-label credit cards issued by merchants and processed in house. To ensure that we do not double-count your organization's volume, please tell us if your organization outsourced processing or receivables ownership (questions 1 and 2 below).

Definitions for selected terms can be found in the [Glossary](#) tab.

**Please leave no item blank.
* Enter "0" if an item is zero
* Enter "NR" if an item is nonzero
but cannot be reported**

Calendar year 2024 private-label credit card transaction processing

1**Transaction processing:**

Please indicate if your organization outsourced some or all of its private-label credit card transaction processing to a third party.

- ☐ 100% in-house
☐ Partially outsourced
☐ Fully outsourced

1.a

If **fully or partially outsourced**, please indicate the name of the processor:

1.b

If your organization outsourced its private-label credit card transaction processing for only part of 2024, please indicate the period of time in 2024 that your organization **did not** outsource:

From (2024) mm/dd:

To (2024) mm/dd:

Calendar year 2024 private-label credit card receivables ownership

2**Receivables ownership:**

Please indicate if your organization outsourced some or all of its private-label credit card receivables ownership to a third party (i.e., outstandings were owned by a different organization).

- ☐ 100% in-house
☐ Partially outsourced
☐ Fully outsourced

2.a

If **fully or partially outsourced**, please indicate the name of the processor:

Virtual cards

[14](#)

Please indicate if your organization issued or processed transactions for virtual private-label credit or charge cards during calendar year 2024.

A virtual card is a digital representation of a private-label credit or charge card that does not exist in physical form. Typically stored in a digital wallet for online, in-app, or in-person purchases with a mobile device (using NFC or barcode scanner). Do not count individual tokenized transactions as virtual cards.

Comments:

Private-Label Credit Card Merchant Issuer Payment Survey

Glossary

Item	Definition
	United States: The states, territories, and possessions of the US, the District of Columbia, the Commonwealth of Puerto Rico, or any political subdivision of any of the foregoing.
	Virtual cards: A virtual card is a digital representation of a private-label credit or charge card that does not exist in physical form. Typically stored in a digital wallet for online, in-app, or in-person purchases with a mobile device (using NFC or barcode scanner). Do not count individual tokenized transactions as virtual cards.
3a	Denials/declines: Transaction attempts that receive a denial response by the host authorization system and do not result in an authorized transaction.
4a	Pre-authorization only: Transactions that are temporarily authorized but not completed or posted, or the portion of authorized amounts that are not included in a final posting.
5	Completed transactions: Purchase or cash advance transactions that are completed and posted to the private-label card account for payment. Such transactions include those that are subsequently reversed in an adjustment or return requested by the merchant or cardholder, defined below.
5a	Cash advances: Transactions involving the provision of cash to the card user via an ATM or over the counter with the use of a credit or charge card, typically authenticated by entering a personal identification number (PIN). (Unlike debit or prepaid card cash-back transactions, cash advances are not combined with a purchase.)
5b	Adjustments and returns: Completed and posted transactions that are subsequently reversed, in whole or in part, and that transfer value back to the card account (e.g., customer return of goods, complaints, disputed charges, fraud, duplicate transaction entry).
6	Net, purchase transactions: Completed purchase transactions that have not been reversed. Exclude denials, transactions that are pre-authorization only, cash advances, and adjustments and returns defined above.
9	Transaction value distribution: Your best estimate for the number and dollar value of transactions that fall within the "dollar size bands" requested.
10a	Lost or stolen card: Fraudulent transactions via a card reported as lost or stolen.
10b	Card issued but not received: Fraudulent transactions reported to be via an intercepted new or replacement card in transit that was activated by someone other than the cardholder.
10c	Fraudulent application: Fraudulent transactions reported to be via a new card that was issued to someone other than the cardholder using falsified information or a stolen identity.
10d	Counterfeit card: Fraudulent in-person transactions via an altered or cloned card.
10e	Fraudulent use of account number: Fraudulent transactions using account number and other card and cardholder details, typically remotely.

Private-Label Credit Card Merchant Issuer Payment Survey

Glossary

Item	Definition
10f	Other (including account takeover): All other fraudulent transactions not included the above categories. In particular, "other" covers account takeover, a form of identity theft whereby an unauthorized party gains access to and use of an existing card account.
15	Total cards: All issued, activated, and unexpired private-label credit or charge cards (linked to US-domiciled accounts).
15	Active cards: Private-label credit or charge cards outstanding with a minimum level of purchase activity according to your organization's definition.
15b	Physical cards: A physical private-label credit or charge card with a magstripe and/or chip that is issued to the customer for making purchases in person.

The Federal Reserve Payments Study

Private-Label Credit Card Processor Payment Survey

Survey Period:
Calendar Year 2024

Responding to this collection is voluntary. The Federal Reserve may not conduct or sponsor, and an organization is not required to respond to, a collection of information unless it displays a currently valid OMB control number. Public reporting burden for this collection of information is estimated to be an average of 8 hours per response, including the time to gather and maintain data in the required form, to review the instructions and to complete the information collection. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to: Secretary, Board of Governors of the Federal Reserve System, 20th and C Streets, NW, Washington, DC 20551; and to the Office of Management and Budget, Paperwork Reduction Project (7100-0351), Washington, DC 20503.

Networks, Processors, and Issuers Payments Surveys (NPIPS)

Private-Label Credit Card Processor Payment Survey

Instructions

About this survey

This survey, part of the NPIPS, covers private-label credit card transactions that your organization processed in-house for calendar year 2024 (CY2024). Allocations of transactions are requested for several category types, including transactions classified as fraudulent by an unauthorized third party. Counts of the number of active and total cards (including both physical and virtual cards) that are issued and/or processed by your organization and outstanding are also requested.

About the study

This survey and other NPIPS surveys are part of the Federal Reserve Payments Study (FRPS), which is conducted by the Federal Reserve Bank of Atlanta and the Federal Reserve Board. Your response will be used in combination with peer responses to estimate national aggregate volumes for CY2024. Aggregate results will be compared to those of previous studies to track changes and identify trends in US payments.

Confidentiality

Any data you provide for this survey is strictly confidential. Individual responses to the survey will not be shared with the public or the industry.

Your participation

To achieve the most reliable results, it is important that you respond completely and accurately. **If your organization outsourced payments processing to another organization during CY2024, please request the necessary data from that organization or provide them with the survey so they may respond on behalf of your organization.**

>> Please respond by: June 13, 2025 <<

Data entry

Please enter annual data for CY2024 in the **Annual Data Entry** tab (i.e., worksheet). If estimated amounts rather than actual amounts are reported for any item(s), please explain in the comments field at the bottom of the tab. By default, tabs are protected and only cells needed for data entry are unlocked.

1. Direct data entry (light blue boxes). For numeric data, key in the actual number or dollar amount.

Note: Items left blank can be difficult to interpret and may generate follow-up questions. If a positive amount cannot be provided, please consider entering one of these alternatives:
* Enter "0" if the requested item is known to be zero. (This is appropriate for items that are not applicable to your organization.)
* Enter "NR" (not reported/not reportable) if the requested item is known to be nonzero but cannot be reported.

Example

2. Automatic entry of calculations or repeated figures (dark blue box). Cells are protected, but different amounts may be entered into the override cells to the right (yellow box), if necessary. Only positive numeric amounts are valid for override cells.
(Automatic entry cells display "NR" until required information is provided.)

Example

Override

NR

3. Option button selection. Click on the button with the option you would like to choose.
(In the example to the right, Option 1 is the default selection.)

Example

- ☒ Option 1
☐ Option 2

Unexpected condition flags

As you fill out the survey, flags may be raised describing the results of simple arithmetic comparisons. These are intended to help you identify potential mistakes and, if appropriate, correct them. However, it may not always be appropriate to revise data when flags are raised, and you may choose to leave your response data as is. If that happens, please provide feedback and explanations in the comments field at the bottom of each tab. Your comments may help us understand your data and avoid the need for follow up.

Conditions that can raise a flag include:

1. **Logical inconsistencies:** These check for essential arithmetical relationships among items based on survey definitions and structure. They include adding-up conditions for items and their sub-items, pairing of zeros with nonzeros, and entry of NR when a known amount is implied by other reported item amounts.
Note: Leaving items blank will not throw flags. However, consistency problems may still exist when the amount is left blank but is implied by other related item amounts. Such cases can be checked by entering NR when an item is not reported/not reportable. If possible, please review your survey workbooks for any blank data-entry cells and replace them before submitting.
2. **Exceeding set boundaries:** These compare against lower and upper boundaries for averages and ratios. The boundaries are intended to allow a wide range, but may not be appropriate for your organization.

Examples

Item in Q3 is not equal to the sum of subitems: Q3 > Q3.a + Q3.b.
Inconsistent pair: Q3 Balance (\$) cannot be 0 if Q3 Number is nonzero.
Item should be reportable if all related items (Q2, Q2.b) are reported.

Example

This average value is unusually low.

Glossary

Definitions for selected terms can be found in the **Glossary** tab.

Submitting the completed survey

Submitted via Intralinks:

Please have your organization's Study Coordinator that established access to an Intralinks account submit this and any other survey workbooks.

To submit your completed survey, log in to your organization's Intralinks account where you will see a folder labeled with a unique numeric identifier assigned to your organization. Within this folder are two subfolders – one for submitting your data and the other for retrieving data that we may send you. Locate the Submit Data folder, and upload your completed survey workbooks on the encrypted Intralinks platform. Once we receive notification of your submission, acknowledgement of receipt will be sent to you from FRPSCommunications@atl.frb.org.

Instructions

Questions?

If you have questions about the survey content or need assistance with the submission process, please contact the Federal Reserve Payments Study team at www.paymentsstudy.com.

Comments

Please provide any feedback and suggestions about the survey or submission process in the box below:

Annual Data Entry

Please report data on private-label credit card transactions and related information for calendar year 2024. Responding completely and accurately will help ensure accuracy of the aggregate estimates.

Include:

- * Only private-label credit cards and transactions that your organization issued and/or processed in-house on behalf of merchant customers
- * Transactions on a closed loop point-of-sale system
- * All domestic and cross-border transactions associated with US-domiciled credit card accounts
- * Physical or virtual credit or charge cards

Do not include:

- * General-purpose (i.e., network-branded Visa, MC, Amex, Discover) credit, debit, or prepaid card transactions
- * Transactions for which your organization was only the receivables owner but not the transaction processor
- * Transactions originated from foreign accounts

Please leave no item blank.
*** Enter "0" if an item is zero**
*** Enter "NR" if an item is nonzero**
but cannot be reported

Definitions for selected terms can be found in the [Glossary](#) tab.

Calendar year 2024 private-label credit card transaction processing

1 Transaction processing:

Please describe your organization's private-label credit card transaction processing services (choose one):

- ☐ Only owned receivables
- ☐ Processed transactions

- 1.a** If **Only owned receivables** is chosen, please indicate the name of the processor:
If your organization does not process private-label credit card transactions, this survey is complete. Thank you for your participation.

Comments:

Private-Label Credit Card Processor Payment Survey

Glossary

Item	Definition
	United States: The states, territories, and possessions of the US, the District of Columbia, the Commonwealth of Puerto Rico, or any political subdivision of any of the foregoing.
	Virtual cards: A virtual card is a digital representation of a private-label credit or charge card that does not exist in physical form. Typically stored in a digital wallet for online, in-app, or in-person purchases with a mobile device (using NFC or barcode scanner). Do not count individual tokenized transactions as virtual cards.
2a	Denials/declines: Transaction attempts that receive a denial response by the host authorization system and do not result in an authorized transaction.
3a	Pre-authorization only: Transactions that are temporarily authorized but not completed or posted, or the portion of authorized amounts that are not included in a final posting.
4	Completed transactions: Purchase or cash advance transactions that are completed and posted to the private-label card account for payment. Such transactions include those that are subsequently reversed in an adjustment or return requested by the merchant or cardholder, defined below.
4a	Cash advances: Transactions involving the provision of cash to the card user via an ATM or over the counter with the use of a credit or charge card, typically authenticated by entering a personal identification number (PIN). (Unlike debit or prepaid card cash-back transactions, cash advances are not combined with a purchase.)
4b	Adjustments and returns: Completed and posted transactions that are subsequently reversed, in whole or in part, and that transfer value back to the card account (e.g., customer return of goods, complaints, disputed charges, fraud, duplicate transaction entry).
5	Net, purchase transactions: Completed purchase transactions that have not been reversed. Exclude denials, transactions that are pre-authorization only, cash advances, and adjustments and returns defined above.
8	Transaction value distribution: Your best estimate for the number and dollar value of transactions that fall within the "dollar size bands" requested.
9a	Lost or stolen card: Fraudulent transactions via a card reported as lost or stolen.
9b	Card issued but not received: Fraudulent transactions reported to be via an intercepted new or replacement card in transit that was activated by someone other than the cardholder.
9c	Fraudulent application: Fraudulent transactions reported to be via a new card that was issued to someone other than the cardholder using falsified information or a stolen identity.
9d	Counterfeit card: Fraudulent in-person transactions via an altered or cloned card.
9e	Fraudulent use of account number: Fraudulent transactions using account number and other card and cardholder details, typically remotely.

Private-Label Credit Card Processor Payment Survey

Glossary

Item	Definition
9f	Other (including account takeover): All other fraudulent transactions not included the above categories. In particular, "other" covers account takeover, a form of identity theft whereby an unauthorized party gains access to and use of an existing card account.
14	Total cards: All issued, activated, and unexpired private-label credit or charge cards (linked to US-domiciled accounts).
14	Active cards: Private-label credit or charge cards outstanding with a minimum level of purchase activity according to your organization's definition.
14b	Physical cards: A physical private-label credit or charge card with a magstripe and/or chip that is issued to the customer for making purchases in person.

The Federal Reserve Payments Study

General-Purpose Debit Card Network Payment Survey

Survey Period:
Calendar Year 2024

Responding to this collection is voluntary. The Federal Reserve may not conduct or sponsor, and an organization is not required to respond to, a collection of information unless it displays a currently valid OMB control number. Public reporting burden for this collection of information is estimated to be an average of 8 hours per response, including the time to gather and maintain data in the required form, to review the instructions and to complete the information collection. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to: Secretary, Board of Governors of the Federal Reserve System, 20th and C Streets, NW, Washington, DC 20551; and to the Office of Management and Budget, Paperwork Reduction Project (7100-0351), Washington, DC 20503.

Networks, Processors, and Issuers Payments Surveys (NPIPS)

General-Purpose Debit Card Network Payment Survey

Instructions

About this survey

This survey, part of the NPIPS, covers general-purpose debit card network transactions for calendar year 2024 (CY2024). Allocations of transactions are requested for several category types, including transactions classified as fraudulent by an unauthorized third party. Counts of the number of active and total cards (including both physical and virtual cards) carrying your organization's network brand that are issued and outstanding are also requested.

About the study

This survey and other NPIPS surveys are part of the Federal Reserve Payments Study (FRPS), which is conducted by the Federal Reserve Bank of Atlanta and the Federal Reserve Board. Your response will be used in combination with peer responses to estimate national aggregate volumes for CY2024. Aggregate results will be compared to those of previous studies to track changes and identify trends in US payments.

Confidentiality

Any data you provide for this survey is strictly confidential. Individual responses to the survey will not be shared with the public or the industry.

Your participation

To achieve the most reliable results, it is important that you respond completely and accurately. If your organization outsourced payments processing to another organization during CY2024, please request the necessary data from that organization or provide them with the survey so they may respond on behalf of your organization.

>> Please respond by: June 13, 2025 <<

Data entry

Please enter annual data for CY2024 in the Annual Data Entry tab (i.e., worksheet). Please enter quarterly data for items highlighted in orange in the Quarterly Data Entry tab. If estimated amounts rather than actual amounts are reported for any item(s), please explain in the comments field at the bottom of the tab. By default, tabs are protected and only cells needed for data entry are unlocked.

1. Direct data entry (light blue boxes). For numeric data, key in the actual number or dollar amount.

Note: Items left blank can be difficult to interpret and may generate follow-up questions. If a positive amount cannot be provided, please consider entering one of these alternatives:

- * Enter "0" if the requested item is known to be zero. (This is appropriate for items that are not applicable to your organization.)
- * Enter "NR" (not reported/not reportable) if the requested item is known to be nonzero but cannot be reported.

2. Automatic entry of calculations or repeated figures (dark blue box). Cells are protected, but different amounts may be entered into the override cells to the right (yellow box), if necessary. Only positive numeric amounts are valid for override cells.

(Automatic entry cells display "NR" until required information is provided.)

3. Option button selection. Click on the button with the option you would like to choose.

(In the example to the right, Option 1 is the default selection.)

4. All-that-apply check box selection. Click on all the boxes with the options you would like to choose.

(In the example to the right, Option 1 and Option 3 are selected.)

Unexpected condition flags

As you fill out the survey, flags may be raised describing the results of simple arithmetic comparisons. These are intended to help you identify potential mistakes and, if appropriate, correct them. However, it may not always be appropriate to revise data when flags are raised, and you may choose to leave your response data as is. If that happens, please provide feedback and explanations in the comments field at the bottom of each tab. Your comments may help us understand your data and avoid the need for follow up.

Conditions that can raise a flag include:

1. **Logical inconsistencies:** These check for essential arithmetical relationships among items based on survey definitions and structure. They include adding-up conditions for items and their sub-items, pairing of zeros with nonzeros, and entry of NR when a known amount is implied by other reported item amounts.

Note: Leaving items blank will not throw flags. However, consistency problems may still exist when the amount is left blank but is implied by other related item amounts. Such cases can be checked by entering NR when an item is not reported/not reportable. If possible, please review your survey workbooks for any blank data-entry cells and replace them before submitting.

2. **Exceeding set boundaries:** These compare against lower and upper boundaries for averages and ratios. The boundaries are intended to allow a wide range, but may not be appropriate for your organization.

Examples

Item in Q3 is not equal to the sum of subitems: Q3 > Q3.a + Q3.b.
Inconsistent pair: Q3 Balance (\$) cannot be 0 if Q3 Number is nonzero.
Item should be reportable if all related items (Q2, Q2.b) are reported.

Example

This average value is unusually low.

Glossary

Definitions for selected terms can be found in the Glossary tab.

Networks, Processors, and Issuers Payments Surveys (NPIPS)
General-Purpose Debit Card Network Payment Survey
Instructions

Submitting the completed survey

Submitted via Intralinks:

Please have your organization's Study Coordinator that established access to an Intralinks account submit this and any other survey workbooks.

To submit your completed survey, log in to your organization's Intralinks account where you will see a folder labeled with a unique numeric identifier assigned to your organization. Within this folder are two subfolders – one for submitting your data and the other for retrieving data that we may send you. Locate the Submit Data folder, and upload your completed survey workbooks on the encrypted Intralinks platform. Once we receive notification of your submission, acknowledgement of receipt will be sent to you from FRPSCcommunications@atl.frb.org.

Questions?

If you have questions about the survey content or need assistance with the submission process, please contact the Federal Reserve Payments Study team at www.paymentsstudy.com.

Comments

Please provide any feedback and suggestions about the survey or submission process in the box below:

General-Purpose Debit Card Network Payment Survey

2024 Data

Annual Data Entry

Please report data on general-purpose debit card transactions and related information for calendar year 2024. Responding completely and accurately will help ensure accuracy of the aggregate estimates.

Include:

- * Only debit cards and transactions carrying your organization's network brand
- * All domestic and cross-border transactions associated with US-domiciled transaction deposit accounts
- * Physical or virtual debit cards

Do not include:

- * Original credit transactions (OCTs) or push payment credits
- * Transactions processed by your organization but carrying another organization's network brand
- * Credit card or private-label (closed loop) transactions
- * Non-network transactions
- * Electronic benefits transfer (EBT) card transactions
- * ATM transactions
- * Transactions originated from foreign accounts (except for questions 13 and 23)

Please leave no item blank.
* Enter "0" if an item is zero
* Enter "NR" if an item is nonzero
but cannot be reported

Quarterly data are also requested for items shaded orange and should be entered in the separate sheet provided.

Definitions for selected terms can be found in the [Glossary](#) tab.

Annual Data Entry

6

Among the different subtotals of payment transactions listed above, which would you prefer to use to report more detailed allocations of payment transactions below? If possible, please use 4. Net, authorized & settled transactions (the default selection).

Preferred basis for reporting payment transactions

- ☐ 3. Total authorized transactions
- ☒ 4. Net, authorized & settled transactions
- ☐ 5. Net, purchase transactions

Transactions by channel

7

Net, authorized & settled transactions = 7.a + 7.b

Number	NR
Value (\$)	NR
Avg. Value (\$)	NR

7.a

In-person transactions

Transactions the card user initiates by interacting with a physical terminal or other device provided by the merchant or payee, usually with a card or mobile device. Also include card-not-present transactions for which the card user is present at the point of sale (e.g., key-entered transactions). Do not include remote transactions classified as card-present solely because of the level of authentication.

Number	
Value (\$)	
Avg. Value (\$)	NR
% of net, authorized & settled transactions (Number)	NR

7.b

Remote transactions (card user not at merchant location)
= 7.b.1 + 7.b.2 + 7.b.3 + 7.b.4

Transactions for which the card user does not interact with a physical terminal or other device provided by the merchant or payee. Typically, these include card-not-present transactions. Also include any remote transactions classified as card-present solely because of the level of authentication.

Number	
Value (\$)	
Avg. Value (\$)	NR
% of net, authorized & settled transactions (Number)	NR

7.b.1

Mail-order/telephone-order transactions (MOTO)

Remote purchase transactions for which the merchant receives an order through the mail or over the telephone. Card is typically charged at time of shipment or delivery. If possible, please exclude payments on account, e.g., bill pay.

Number	
Value (\$)	
Avg. Value (\$)	NR
% of remote transactions (Number)	NR

7.b.2

Internet purchase transactions (E-commerce)

Purchase transactions for goods and services from a merchant website or mobile app (i.e., M-commerce). May involve varying levels of authentication including the keyed entry of a card number, use of "card on file" information, or redirection to a payment service. Card is typically charged at time of shipment or delivery. If possible, please exclude payments on account, e.g., bill pay.

Number	
Value (\$)	
Avg. Value (\$)	NR
% of remote transactions (Number)	NR

7.b.3

Bill pay: recurring/subscription/installment transactions

Payments of bills or invoices, often on a prearranged basis and may include "card on file", based on an ongoing customer relationship. Also include payments made on a monthly or installment basis. Examples include utility bill payments and multiple payments for a single purchase.

Number	
Value (\$)	
Avg. Value (\$)	NR
% of remote transactions (Number)	NR

7.b.4

Other remote transactions

Transactions that do not belong or do not have identifiers to assign into the remote transaction categories provided above.

Number	
Value (\$)	
Avg. Value (\$)	NR
% of remote transactions (Number)	NR

Please describe any significant transaction types included in the "Other remote transactions" category above:

In-person transactions by authentication method

8

In-person transactions (repeat item 7.a) = 8.a + 8.b

Third-party fraudulent transactions

14

Please indicate if your network would be able to provide third-party fraud data.

If Yes (the default selection), please skip question 14.a below.

- ☐ Yes
- ☐ No

14.a

If No, please select all that apply.

- ☐ Do not track fraud
- ☐ Not enough resources
- ☐ Data sensitivity
- ☐ Other, please specify below

Preferred basis for reporting third-party fraudulent transactions

- ☐ 3. Total authorized transactions
- ☒ 4. Net, authorized & settled transactions
- ☐ 5. Net, purchase transactions

15

Some organizations may track third-party fraudulent transactions differently than payment transactions. On which basis would you prefer to report third-party fraudulent transactions below? If possible, please use 4. Net, authorized & settled transactions (the default selection).

16

Third-party fraudulent transactions (based on 4. Net, authorized & settled transactions)
= 16.a + 16.b + 16.c + 16.d + 16.e + 16.f

Include all unauthorized third-party fraudulent transactions that cleared and settled for which funds subsequently became available to the perpetrator. Do not include fraud attempts that were prevented before they were cleared and settled, or fraud committed by the accountholder or other users authorized to make payments.

[17.b.2](#)

Internet purchase transactions (E-commerce)

Purchase transactions for goods and services from a merchant website or mobile app (i.e., M-commerce). May involve varying levels of authentication including the keyed entry of a card number, use of "card on file" information, or redirection to a payment service. Card is typically charged at time of shipment or delivery. If possible, please exclude payments on account, e.g., bill pay.

Bill pay: recurring/subscription/installment transactions

Payments of bills or invoices, often on a prearranged basis and may include "card on file", based on an ongoing customer relationship. Also include payments made on a monthly or installment basis. Examples include utility bill payments and multiple payments for a single purchase.

Comments:

General-Purpose Debit Card Network Payment Survey

Glossary

Item	Definition
	United States: The states, territories, and possessions of the US, the District of Columbia, the Commonwealth of Puerto Rico, or any political subdivision of any of the foregoing.
	Virtual cards: A virtual card is a digital representation of a general-purpose debit card that does not exist in physical form. Typically stored in a digital wallet for online, in-app, or in-person purchases with a mobile device (using NFC or barcode scanner). Do not count individual tokenized transactions as virtual cards.
2a	Denials/declines: Transaction attempts that receive a denial response by the host authorization system and do not result in an authorized transaction.
3a	Pre-authorization only: Transactions that are approved but not settled (e.g., the initial amount which a rental agency, hotel, or fuel dispenser operator receives authorization, but final payment and amount transfer is never made).
4	Net, authorized & settled transactions: Transactions initiated by the acquirer that are completed with the final payment amount transferred from the acquirer to the issuer. Such transactions include those that are subsequently reversed through a chargeback, or other adjustment or return.
4a	Cash-back at the point of sale: Purchase transactions that include an amount of cash given back to the card user. A point-of-sale (POS) purchase transaction with cash back is counted as one transaction.
4b.1	Chargebacks: Transactions initiated by the issuer that reverse a transaction, in whole or in part, and transfer value from the acquirer to the issuer (e.g., customer disputes, fraud, processing errors, authorization issues, or non-fulfillment of copy requests). A chargeback provides the issuer with a way to return a disputed transaction, typically on behalf of the cardholder.
4b.2	Other adjustments and returns: Transactions initiated by the acquirer that reverse a transaction, in whole or in part, and transfer value from the acquirer to the issuer (e.g., customer return of goods, complaints, merchant-identified fraud, duplicate transaction entry).
5	Net, purchase transactions: Transactions that have been authorized and settled. Exclude denials, transactions that are pre-authorization only, cash advances, chargebacks, and other adjustments and returns.
8a	Transactions with chip-authentication: In-person transactions for which the account information is taken from a computer microchip embedded in a card or mobile device that securely stores data to be read via contact or contactless/NFC communications with a merchant payment device or terminal. Include EMV and all other types of chip transactions with a card or mobile device. Report only in-person transactions.
8a.1 & 8b.1	Transactions with a PIN: In-person transactions for which a card user enters their Personal Identification Number (PIN) to authenticate the card purchase.
8a.2 & 8b.2	Transactions without a PIN: In-person transactions for which a card user does not enter a Personal Identification Number (PIN) to authenticate the card purchase.

General-Purpose Debit Card Network Payment Survey

Glossary

Item	Definition
8b	Transactions without chip-authentication: In-person transactions for which the account information is not taken from a computer microchip. Typically the information is taken from a magstripe on a card, and may occasionally be manually keyed at the register. Report only in-person transactions.
9a	Contact transactions (chip card inserted or "dipped"): Transactions are initiated by inserting a card with an embedded EMV microchip into a merchant's chip-enabled terminal. The terminal makes contact with the inserted chip for authentication.
9b	Contactless transactions (chip card or mobile device RFID, "tap" or "wave"): Transactions are initiated by tapping a card or a mobile device with an embedded microchip at a merchant's chip-enabled terminal. Contactless transactions typically use Radio Frequency Identification (RFID) and/or a specialized subset of Near-field Communications (NFC) standards to make the connection to the chip for authentication. May include some contactless EMV transactions.
12	Transaction value distribution: Your best estimate for the number and dollar value of transactions that fall within the "dollar size bands" requested.
16a	Lost or stolen card: Fraudulent transactions via a card reported as lost or stolen.
16b	Card issued but not received: Fraudulent transactions reported to be via an intercepted new or replacement card in transit that was activated by someone other than the cardholder.
16c	Fraudulent application: Fraudulent transactions reported to be via a new card that was issued to someone other than the cardholder using falsified information or a stolen identity.
16d	Counterfeit card: Fraudulent in-person transactions via an altered or cloned card.
16e	Fraudulent use of account number: Fraudulent transactions using account number and other card and cardholder details, typically remotely.
16f	Other (including account takeover): All other fraudulent transactions not included in the above categories. In particular, "other" covers account takeover, a form of identity theft whereby an unauthorized party gains access to and use of an existing card account.
25	Total cards: All issued, activated, and unexpired general-purpose debit cards (linked to US-domiciled accounts).
25	Active cards: General-purpose debit cards outstanding with a minimum level of purchase activity according to your organization's definition.
25b	Physical cards: A physical general-purpose debit card with a magstripe and/or chip that is issued to the customer for making purchases in person.

The Federal Reserve Payments Study

General-Purpose Prepaid Card Network Payment Survey

Survey Period:
Calendar Year 2024

Responding to this collection is voluntary. The Federal Reserve may not conduct or sponsor, and an organization is not required to respond to, a collection of information unless it displays a currently valid OMB control number. Public reporting burden for this collection of information is estimated to be an average of 8 hours per response, including the time to gather and maintain data in the required form, to review the instructions and to complete the information collection. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to: Secretary, Board of Governors of the Federal Reserve System, 20th and C Streets, NW, Washington, DC 20551; and to the Office of Management and Budget, Paperwork Reduction Project (7100-0351), Washington, DC 20503.

Networks, Processors, and Issuers Payments Surveys (NPIPS)

General-Purpose Prepaid Card Network Payment Survey

Instructions

About this survey

This survey, part of the NPIPS, covers general-purpose prepaid card network transactions for calendar year 2024 (CY 2024). Allocations of transactions are requested for several category types, including transactions classified as fraudulent by an unauthorized third party. Counts of the number of active and total cards (including both physical and virtual cards) carrying your organization's network brand that are issued and outstanding are also requested.

About the study

This survey and other NPIPS surveys are part of the Federal Reserve Payments Study (FRPS), which is conducted by the Federal Reserve Bank of Atlanta and the Federal Reserve Board. Your response will be used in combination with peer responses to estimate national aggregate volumes for CY2024. Aggregate results will be compared to those of previous studies to track changes and identify trends in US payments.

Confidentiality

Any data you provide for this survey is strictly confidential. Individual responses to the survey will not be shared with the public or the industry.

Your participation

To achieve the most reliable results, it is important that you respond completely and accurately. If your organization outsourced payments processing to another organization during CY2024, please request the necessary data from that organization or provide them with the survey so they may respond on behalf of your organization.

>> Please respond by: June 13, 2025 <<

Data entry

Please enter annual data for CY2024 in the Annual Data Entry tab (i.e., worksheet). Please enter quarterly data for items highlighted in orange in the Quarterly Data Entry tab. If estimated amounts rather than actual amounts are reported for any item(s), please explain in the comments field at the bottom of the tab. By default, tabs are protected and only cells needed for data entry are unlocked.

1. Direct data entry (light blue boxes). For numeric data, key in the actual number or dollar amount.

Note: Items left blank can be difficult to interpret and may generate follow-up questions. If a positive amount cannot be provided, please consider entering one of these alternatives:

- * Enter "0" if the requested item is known to be zero. (This is appropriate for items that are not applicable to your organization.)
- * Enter "NR" (not reported/not reportable) if the requested item is known to be nonzero but cannot be reported.

2. Automatic entry of calculations or repeated figures (dark blue box). Cells are protected, but different amounts may be entered into the override cells to the right (yellow box), if necessary. Only positive numeric amounts are valid for override cells.

(Automatic entry cells display "NR" until required information is provided.)

3. Option button selection. Click on the button with the option you would like to choose.

(In the example to the right, Option 1 is the default selection.)

4. All-that-apply check box selection. Click on all the boxes with the options you would like to choose.

(In the example to the right, Option 1 and Option 3 are selected.)

Unexpected condition flags

As you fill out the survey, flags may be raised describing the results of simple arithmetic comparisons. These are intended to help you identify potential mistakes and, if appropriate, correct them. However, it may not always be appropriate to revise data when flags are raised, and you may choose to leave your response data as is. If that happens, please provide feedback and explanations in the comments field at the bottom of each tab. Your comments may help us understand your data and avoid the need for follow up.

Conditions that can raise a flag include:

1. **Logical inconsistencies:** These check for essential arithmetical relationships among items based on survey definitions and structure. They include adding-up conditions for items and their sub-items, pairing of zeros with nonzeros, and entry of NR when a known amount is implied by other reported item amounts.

Note: Leaving items blank will not throw flags. However, consistency problems may still exist when the amount is left blank but is implied by other related item amounts. Such cases can be checked by entering NR when an item is not reported/not reportable. If possible, please review your survey workbooks for any blank data-entry cells and replace them before submitting.

2. **Exceeding set boundaries:** These compare against lower and upper boundaries for averages and ratios. The boundaries are intended to allow a wide range, but may not be appropriate for your organization.

Examples

Item in Q3 is not equal to the sum of subitems: Q3 > Q3.a + Q3.b.
Inconsistent pair: Q3 Balance (\$) cannot be 0 if Q3 Number is nonzero.
Item should be reportable if all related items (Q2, Q2.b) are reported.

Example

This average value is unusually low.

Definitions for selected terms can be found in the Glossary tab.

Networks, Processors, and Issuers Payments Surveys (NPIPS)

General-Purpose Prepaid Card Network Payment Survey

Instructions

Submitting the completed survey

Submitted via Intralinks:

Please have your organization's Study Coordinator that established access to an Intralinks account submit this and any other survey workbooks.

To submit your completed survey, log in to your organization's Intralinks account where you will see a folder labeled with a unique numeric identifier assigned to your organization. Within this folder are two subfolders – one for submitting your data and the other for retrieving data that we may send you. Locate the Submit Data folder, and upload your completed survey workbooks on the encrypted Intralinks platform. Once we receive notification of your submission, acknowledgement of receipt will be sent to you from FRPSCcommunications@atl.frb.org.

Questions?

If you have questions about the survey content or need assistance with the submission process, please contact the Federal Reserve Payments Study team at www.paymentsstudy.com.

Comments

Please provide any feedback and suggestions about the survey or submission process in the box below:

General-Purpose Prepaid Card Network Payment Survey

2024 Data

Annual Data Entry

Please report data on general-purpose prepaid card transactions and related information for calendar year 2024. Responding completely and accurately will help ensure accuracy of the aggregate estimates.

Include:

- * Only prepaid cards and transactions carrying your organization's network brand
- * All domestic and cross-border transactions associated with US-domiciled prepaid card program accounts
- * Physical or virtual prepaid cards

Do not include:

- * Original credit transactions (OCTs) or push payment credits
- * Transactions processed by your organization but carrying another organization's network brand
- * Credit card, non-prepaid debit card, or private-label (closed loop) transactions
- * Non-network transactions
- * Electronic benefits transfer (EBT) card transactions
- * ATM transactions
- * Transactions originated from foreign accounts (except for questions 13 and 24)

Please leave no item blank.
*** Enter "0" if an item is zero**
*** Enter "NR" if an item is nonzero but cannot be reported**

Quarterly data are also requested for items shaded orange and should be entered in the separate sheet provided.

Definitions for selected terms can be found in the [Glossary](#) tab.

Calendar year 2024 general-purpose prepaid card transactions

1	Total transactions	Number

Annual Data Entry

5

Among the different subtotals of payment transactions listed above, which would you prefer to use to report more detailed allocations of payment transactions below? If possible, please use 3. *Net, authorized & settled transactions* (the default selection).

Preferred basis for reporting payment transactions

- ☐ 2. Total authorized transactions
- ☒ 3. Net, authorized & settled transactions
- ☐ 4. Net, purchase transactions

Transactions by channel

6

Net, authorized & settled transactions = 6.a + 6.b

Number	NR
Value (\$)	NR
Avg. Value (\$)	NR

6.a

In-person transactions

Transactions the card user initiates by interacting with a physical terminal or other device provided by the merchant or payee, usually with a card or mobile device. Also include card-not-present transactions for which the card user is present at the point of sale (e.g., key-entered transactions). Do not include remote transactions classified as card-present solely because of the level of authentication.

Number	
Value (\$)	
Avg. Value (\$)	NR
% of net, authorized & settled transactions (Number)	NR

6.b

Remote transactions (card user not at merchant location)
= 6.b.1 + 6.b.2 + 6.b.3 + 6.b.4

Transactions for which the card user does not interact with a physical terminal or other device provided by the merchant or payee. Typically, these include card-not-present transactions. Also include any remote transactions classified as card-present solely because of the level of authentication.

Number	
Value (\$)	
Avg. Value (\$)	NR
% of net, authorized & settled transactions (Number)	NR

6.b.1

Mail-order/telephone-order transactions (MOTO)

Remote purchase transactions for which the merchant receives an order through the mail or over the telephone. Card is typically charged at time of shipment or delivery. If possible, please exclude payments on account, e.g., bill pay.

Number	
Value (\$)	
Avg. Value (\$)	NR
% of remote transactions (Number)	NR

6.b.2

Internet purchase transactions (E-commerce)

Purchase transactions for goods and services from a merchant website or mobile app (i.e., M-commerce). May involve varying levels of authentication including the keyed entry of a card number, use of "card on file" information, or redirection to a payment service. Card is typically charged at time of shipment or delivery. If possible, please exclude payments on account, e.g., bill pay.

Number	
Value (\$)	
Avg. Value (\$)	NR
% of remote transactions (Number)	NR

6.b.3

Bill pay: recurring/subscription/installment transactions

Payments of bills or invoices, often on a prearranged basis and may include "card on file", based on an ongoing customer relationship. Also include payments made on a monthly or installment basis. Examples include utility bill payments and multiple payments for a single purchase.

Number	
Value (\$)	
Avg. Value (\$)	NR
% of remote transactions (Number)	NR

6.b.4

Other remote transactions

Transactions that do not belong or do not have identifiers to assign into the remote transaction categories provided above.

Number	
Value (\$)	
Avg. Value (\$)	NR
% of remote transactions (Number)	NR

Please describe any significant transaction types included in the "Other remote transactions" category above:

Comments:

General-Purpose Prepaid Card Network Payment Survey

Glossary

Item	Definition
	United States: The states, territories, and possessions of the US, the District of Columbia, the Commonwealth of Puerto Rico, or any political subdivision of any of the foregoing.
	Virtual cards: A virtual card is a digital representation of a general-purpose prepaid card that does not exist in physical form. Typically stored in a digital wallet for online, in-app, or in-person purchases with a mobile device (using NFC or barcode scanner). Do not count individual tokenized transactions as virtual cards.
1a	Denials/declines: Transaction attempts that receive a denial response by the host authorization system and do not result in an authorized transaction.
2a	Pre-authorization only: Transactions that are approved but not settled (e.g., the initial amount which a rental agency, hotel, or fuel dispenser operator receives authorization, but final payment and amount transfer is never made).
3	Net, authorized & settled transactions: Transactions initiated by the acquirer that are completed with the final payment amount transferred from the acquirer to the issuer. Such transactions include those that are subsequently reversed through a chargeback, or other adjustment or return.
3a	Cash-back at the point of sale: Purchase transactions that include an amount of cash given back to the card user. A point-of-sale (POS) purchase transaction with cash back is counted as one transaction.
3.b.1	Chargebacks: Transactions initiated by the issuer that reverse a transaction, in whole or in part, and transfer value from the acquirer to the issuer (e.g., customer disputes, fraud, processing errors, authorization issues, or non-fulfillment of copy requests). A chargeback provides the issuer with a way to return a disputed transaction, typically on behalf of the cardholder.
3b.2	Other adjustments and returns: Transactions initiated by the acquirer that reverse a transaction, in whole or in part, and transfer value from the acquirer to the issuer (e.g., customer return of goods, complaints, merchant-identified fraud, duplicate transaction entry).
4	Net, purchase transactions: Transactions that have been authorized and settled. Exclude denials, transactions that are pre-authorization only, cash advances, chargebacks, and other adjustments and returns.
7a	Transactions with chip-authentication: In-person transactions for which the account information is taken from a computer microchip embedded in a card or mobile device that securely stores data to be read via contact or contactless/NFC communications with a merchant payment device or terminal. Include EMV and all other types of chip transactions with a card or mobile device. Report only in-person transactions.
7a.1 & 7b.1	Transactions with a PIN: In-person transactions for which a card user enters their Personal Identification Number (PIN) to authenticate the card purchase.
7a.2 & 7b.2	Transactions without a PIN: In-person transactions for which a card user does not enter a Personal Identification Number (PIN) to authenticate the card purchase.

General-Purpose Prepaid Card Network Payment Survey

Glossary

Item	Definition
7b	Transactions without chip-authentication: In-person transactions for which the account information is not taken from a computer microchip. Typically the information is taken from a magstripe on a card, and may occasionally be manually keyed at the register. Report only in-person transactions.
8a	Contact transactions (chip card inserted or "dipped"): Transactions are initiated by inserting a card with an embedded EMV microchip into a merchant's chip-enabled terminal. The terminal makes contact with the inserted chip for authentication.
8b	Contactless transactions (chip card or mobile device RFID, "tap" or "wave"): Transactions are initiated by tapping a card or a mobile device with an embedded microchip at a merchant's chip-enabled terminal. Contactless transactions typically use Radio Frequency Identification (RFID) and/or a specialized subset of Near-field Communications (NFC) standards to make the connection to the chip for authentication. May include some contactless EMV transactions.
12	Transaction value distribution: Your best estimate for the number and dollar value of transactions that fall within the "dollar size bands" requested.
16a	Lost or stolen card: Fraudulent transactions via a card reported as lost or stolen.
16b	Card issued but not received: Fraudulent transactions reported to be via an intercepted new or replacement card in transit that was activated by someone other than the cardholder.
16c	Fraudulent application: Fraudulent transactions reported to be via a new card that was issued to someone other than the cardholder using falsified information or a stolen identity.
16d	Counterfeit card: Fraudulent in-person transactions via an altered or cloned card.
16e	Fraudulent use of account number: Fraudulent transactions using account number and other card and cardholder details, typically remotely.
16f	Other (including account takeover): All other fraudulent transactions not included in the above categories. In particular, "other" covers account takeover, a form of identity theft whereby an unauthorized party gains access to and use of an existing card account.
26	Total cards: All issued, activated, and unexpired general-purpose prepaid cards (linked to US-domiciled accounts).
26	Active cards: General-purpose prepaid cards outstanding with a minimum level of purchase activity according to your organization's definition.
26b	Physical cards: A physical general-purpose prepaid card with a magstripe and/or chip that is issued to the customer for making purchases in person.

The Federal Reserve Payments Study

Automated Teller Machine Card Network Transaction Survey

Survey Period:
Calendar Year 2024

Responding to this collection is voluntary. The Federal Reserve may not conduct or sponsor, and an organization is not required to respond to, a collection of information unless it displays a currently valid OMB control number. Public reporting burden for this collection of information is estimated to be an average of 8 hours per response, including the time to gather and maintain data in the required form, to review the instructions and to complete the information collection. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to: Secretary, Board of Governors of the Federal Reserve System, 20th and C Streets, NW, Washington, DC 20551; and to the Office of Management and Budget, Paperwork Reduction Project (7100-0351), Washington, DC 20503.

Networks, Processors, and Issuers Payments Surveys (NPIPS)

Automated Teller Machine Card Network Transaction Survey

Instructions

About this survey

This survey, part of the NPIPS, covers automated teller machine (ATM) card network transactions for calendar year 2024 (CY 2024). Allocations of total ATM transactions and cash withdrawals are requested for several category types, including cash withdrawals classified as fraudulent by an unauthorized third party. Counts of the number of ATM terminals are also requested.

About the study

This survey and other NPIPS surveys are part of the Federal Reserve Payments Study (FRPS), which is conducted by the Federal Reserve Bank of Atlanta and the Federal Reserve Board. Your response will be used in combination with peer responses to estimate national aggregate volumes for CY2024. Aggregate results will be compared to those of previous studies to track changes and identify trends in US payments.

Confidentiality

Any data you provide for this survey is strictly confidential. Individual responses to the survey will not be shared with the public or the industry.

Your participation

To achieve the most reliable results, it is important that you respond completely and accurately. If your organization outsourced payments processing to another organization during CY2024, please request the necessary data from that organization or provide them with the survey so they may respond on behalf of your organization.

>> Please respond by: June 13, 2025 <<

Data entry

Please enter annual data for CY2024 in the Annual Data Entry tab (i.e., worksheet). If estimated amounts rather than actual amounts are reported for any item(s), please explain in the comments field at the bottom of the tab. By default, tabs are protected and only cells needed for data entry are unlocked.

1. Direct data entry (light blue boxes). For numeric data, key in the actual number or dollar amount.
Note: Items left blank can be difficult to interpret and may generate follow-up questions. If a positive amount cannot be provided, please consider entering one of these alternatives:
* Enter "0" if the requested item is known to be zero. (This is appropriate for items that are not applicable to your organization.)
* Enter "NR" (not reported/not reportable) if the requested item is known to be nonzero but cannot be reported.
2. Automatic entry of calculations or repeated figures (dark blue box). Cells are protected, but different amounts may be entered into the override cells to the right (yellow box), if necessary. Only positive numeric amounts are valid for override cells.
(Automatic entry cells display "NR" until required information is provided.)
3. Option button selection. Click on the button with the option you would like to choose.
(In the example to the right, Option 1 is the default selection.)
4. All-that-apply check box selection. Click on all the boxes with the options you would like to choose.
(In the example to the right, Option 1 and Option 3 are selected.)

Unexpected condition flags

As you fill out the survey, flags may be raised describing the results of simple arithmetic comparisons. These are intended to help you identify potential mistakes and, if appropriate, correct them. However, it may not always be appropriate to revise data when flags are raised, and you may choose to leave your response data as is. If that happens, please provide feedback and explanations in the comments field at the bottom of each tab. Your comments may help us understand your data and avoid the need for follow up. Conditions that can raise a flag include:

1. **Logical inconsistencies:** These check for essential arithmetical relationships among items based on survey definitions and structure. They include adding-up conditions for items and their sub-items, pairing of zeros with nonzeros, and entry of NR when a known amount is implied by other reported item amounts.
Note: Leaving items blank will not throw flags. However, consistency problems may still exist when the amount is left blank but is implied by other related item amounts. Such cases can be checked by entering NR when an item is not reported/not reportable. If possible, please review your survey workbooks for any blank data-entry cells and replace them before submitting.
2. **Exceeding set boundaries:** These compare against lower and upper boundaries for averages and ratios. The boundaries are intended to allow a wide range, but may not be appropriate for your organization.

Glossary

Definitions for selected terms can be found in the Glossary tab.

Examples

Item in Q3 is not equal to the sum of subitems: Q3 > Q3.a + Q3.b.
Inconsistent pair: Q3 Balance (\$) cannot be 0 if Q3 Number is nonzero.
Item should be reportable if all related items (Q2, Q2.b) are reported.

Example

This average value is unusually low.

Networks, Processors, and Issuers Payments Surveys (NPIPS)

Automated Teller Machine Card Network Transaction Survey

Instructions

Submitting the completed survey

Submitted via Intralinks:

Please have your organization's Study Coordinator that established access to an Intralinks account submit this and any other survey workbooks.

To submit your completed survey, log in to your organization's Intralinks account where you will see a folder labeled with a unique numeric identifier assigned to your organization. Within this folder are two subfolders – one for submitting your data and the other for retrieving data that we may send you. Locate the Submit Data folder, and upload your completed survey workbooks on the encrypted Intralinks platform. Once we receive notification of your submission, acknowledgement of receipt will be sent to you from FRPSCcommunications@atl.frb.org.

Questions?

If you have questions about the survey content or need assistance with the submission process, please contact the Federal Reserve Payments Study team at www.paymentsstudy.com.

Comments

Please provide any feedback and suggestions about the survey or submission process in the box below:

Automated Teller Machine Card Network Transaction Survey

2024 Data

Annual Data Entry

Please report data on automated teller machine card network transactions and related information for calendar year requested below. Responding completely and accurately will help ensure accuracy of the aggregate estimates.

Include:

- * All ATM transactions processed through your organization's ATM network switch
- * Transactions made with ATM, debit, prepaid, and credit cards issued on US-domiciled accounts (US cards)
- * Domestic and cross-border transactions with US cards
- * Chip-accepted and chip-not-accepted ATM terminals

Do not include:

- * Cash withdrawals made with non-US cards (except for questions 4 and 9)

Definitions for selected terms can be found in the [Glossary](#) tab.

Please leave no item blank.
*** Enter "0" if an item is zero**
*** Enter "NR" if an item is nonzero but cannot be reported**

Calendar year 2024 ATM transactions

1	Total ATM transactions = 1.a + 1.b + 1.c + 1.d + 1.e + 1.f	Number	
1.a	Denials/declines	Number	
	% of total ATM transaction (Number)		NR

		% of ATM terminals as of December 31, 2024	NR
11.b	Chip-not-accepted terminals	Total terminals	
		% of ATM terminals as of December 31, 2024	NR

Comments:

Automated Teller Machine Card Network Transaction Survey

Glossary

Item	Definition
	United States: The states, territories, and possessions of the US, the District of Columbia, the Commonwealth of Puerto Rico, or any political subdivision of any of the foregoing.
1a	Denials/declines: Transaction attempts that receive a denial response by the host authorization system and do not result in an authorized transaction.
2a.1	With contact chip card (insert or "Dip"): Cash withdrawals are initiated and authenticated by inserting an ATM card with an embedded microchip (typically, EMV) into a chip-enabled ATM terminal. Do not include payments initiated using a magstripe reader.
2a.2	Contactless, with contactless card or mobile device ("Tap"): Cash withdrawals are initiated by card or mobile device using a variety of secure radio methods that replace inserting the card into a reader that makes direct electrical contact with the chip. Contactless chip cash withdrawals may use Radio Frequency Identification (RFID) and/or a specialized subset of Near-field Communications (NFC) standards to initiate and authenticate an ATM transaction. Contactless authentication may utilize a physical card, fob, or sticker that is "tapped" to authenticate transactions at an ATM. Examples of systems that may be supported by an ATM network may include MasterCard or Visa Cardless ATM. Also include Consumer Device Cardholder Verification Methods (e.g., Apple Pay, Google Pay, CashTapp, Touch ID or device passcode). Do not include payments initiated using a magstripe reader.
2b.1	No card ("Scan"): Cash withdrawals are initiated using a mobile device to scan barcode/QR code or entering an authentication code displayed on phone using the ATM keypad. Generally for this new method, consumer initiates withdrawal using the mobile banking or mobile wallet app and ATM will then display a QR code on the screen for you to scan with your phone before dispensing the money. Do not include NFC "Tap" transactions which should be entered in those fields listed above.
2b.2	With card ("Swipe"): Cash withdrawals are initiated using traditional magstripe reader. Do not include "Dip" or "Tap" transactions which should be entered in those fields above.
6a	Lost or stolen card: Fraudulent transactions via a card reported as lost or stolen.
6b	Card issued but not received: Fraudulent transactions reported to be via an intercepted new or replacement card in transit that was activated by someone other than the cardholder.
6c	Fraudulent application: Fraudulent transactions reported to be via a new card that was issued to someone other than the cardholder using falsified information or a stolen identity.
6d	Counterfeit card: Fraudulent in-person transactions via an altered or cloned card.
6e	Other (including account takeover): All other fraudulent transactions not included in the above categories. In particular, "other" covers account takeover, a form of identity theft whereby an unauthorized party gains access to and use of an existing card account.
10a & 11a	Chip-accepted terminals: An ATM terminal that accepts card with a computer microchip (including EMV and other types of chip cards). Include terminals that accept chip-based transactions that are either contact or contactless.

The Federal Reserve Payments Study

General-Purpose Prepaid Card Processor Payment Survey

Survey Period:
Calendar Year 2024

Responding to this collection is voluntary. The Federal Reserve may not conduct or sponsor, and an organization is not required to respond to, a collection of information unless it displays a currently valid OMB control number. Public reporting burden for this collection of information is estimated to be an average of 8 hours per response, including the time to gather and maintain data in the required form, to review the instructions and to complete the information collection. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to: Secretary, Board of Governors of the Federal Reserve System, 20th and C Streets, NW, Washington, DC 20551; and to the Office of Management and Budget, Paperwork Reduction Project (7100-0351), Washington, DC 20503.

Networks, Processors, and Issuers Payments Surveys (NPIPS)

General-Purpose Prepaid Card Processor Payment Survey

Instructions

About this survey

This survey, part of the NPIPS, covers general-purpose prepaid card transactions (for both payment and card funding) that your organization processed for calendar year 2024 (CY2024). Allocations of transactions are requested for several category types. Counts of the number of active and total cards that are issued and/or processed by your organization and outstanding are also requested.

About the study

This survey and other NPIPS surveys are part of the Federal Reserve Payments Study (FRPS), which is conducted by the Federal Reserve Bank of Atlanta and the Federal Reserve Board. Your response will be used in combination with peer responses to estimate national aggregate volumes for CY2024. Aggregate results will be compared to those of previous studies to track changes and identify trends in US payments.

Confidentiality

Any data you provide for this survey is strictly confidential. Individual responses to the survey will not be shared with the public or the industry.

Your participation

To achieve the most reliable results, it is important that you respond completely and accurately. **If your organization outsourced payments processing to another organization during CY2024, please request the necessary data from that organization or provide them with the survey so they may respond on behalf of your organization.**

>> Please respond by: June 13, 2025 <<

Data entry

Please enter annual data for CY2024 in the **Annual Data Entry** tab (i.e., worksheet). If estimated amounts rather than actual amounts are reported for any item(s), please explain in the comments field at the bottom of the tab. By default, tabs are protected and only cells needed for data entry are unlocked.

1. Direct data entry (light blue boxes). For numeric data, key in the actual number or dollar amount.

Note: Items left blank can be difficult to interpret and may generate follow-up questions. If a positive amount cannot be provided, please consider entering one of these alternatives:

* Enter "0" if the requested item is known to be zero. (This is appropriate for items that are not applicable to your organization.)

* Enter "NR" (not reported/not reportable) if the requested item is known to be nonzero but cannot be reported.
2. Automatic entry of calculations or repeated figures (dark blue box). Cells are protected, but different amounts may be entered into the override cells to the right (yellow box), if necessary. Only positive numeric amounts are valid for override cells.

(Automatic entry cells display "NR" until required information is provided.)
3. Option button selection. Click on the button with the option you would like to choose.

(In the example to the right, Option 1 is the default selection.)

☐ Option 2

Unexpected condition flags

As you fill out the survey, flags may be raised describing the results of simple arithmetic comparisons. These are intended to help you identify potential mistakes and, if appropriate, correct them. However, it may not always be appropriate to revise data when flags are raised, and you may choose to leave your response data as is. If that happens, please provide feedback and explanations in the comments field at the bottom of each tab. Your comments may help us understand your data and avoid the need for follow up.

Conditions that can raise a flag include:

1. **Logical inconsistencies:** These check for essential arithmetical relationships among items based on survey definitions and structure. They include adding-up conditions for items and their sub-items, pairing of zeros with nonzeros, and entry of NR when a known amount is implied by other reported item amounts.

Note: Leaving items blank will not throw flags. However, consistency problems may still exist when the amount is left blank but is implied by other related item amounts. Such cases can be checked by entering NR when an item is not reported/not reportable. If possible, please review your survey workbooks for any blank data-entry cells and replace them before submitting.
2. **Exceeding set boundaries:** These compare against lower and upper boundaries for averages and ratios. The boundaries are intended to allow a wide range, but may not be appropriate for your organization.

Examples

Item in Q3 is not equal to the sum of subitems: Q3 > Q3.a + Q3.b.

Inconsistent pair: Q3 Balance (\$) cannot be 0 if Q3 Number is nonzero.

Item should be reportable if all related items (Q2, Q2.b) are reported.

Example

This average value is unusually low.

Glossary

Definitions for selected terms can be found in the **Glossary** tab.

Submitting the completed survey

Submitted via Intralinks:

Please have your organization's Study Coordinator that established access to an Intralinks account submit this and any other survey workbooks.

To submit your completed survey, log in to your organization's Intralinks account where you will see a folder labeled with a unique numeric identifier assigned to your organization. Within this folder are two subfolders – one for submitting your data and the other for retrieving data that we may send you. Locate the Submit Data folder, and upload your completed survey workbooks on the encrypted Intralinks platform. Once we receive notification of your submission, acknowledgement of receipt will be sent to you from FRPSCommunications@atl.frb.org.

Questions?

If you have questions about the survey content or need assistance with the submission process, please contact the Federal Reserve Payments Study team at www.paymentsstudy.com.

Comments

Please provide any feedback and suggestions about the survey or submission process in the box below:

Annual Data Entry

Please report data on general-purpose prepaid card transactions and related information for calendar year 2024. Responding completely and accurately will help ensure accuracy of the aggregate estimates.

Include:

* All types of network-branded (open-loop) transactions initiated by the acquirer and made with US general-purpose prepaid cards issued on US-domiciled accounts (US issuer) for which you were the processor.

* Include both domestic and cross-border transactions made from those cards.

* Include government-administered general-purpose prepaid card transactions but exclude electronic benefits transfer (EBT) card transactions.

Do not include:

* Private-label (closed-loop) prepaid card transactions, non-prepaid debit card transactions, credit card transactions, or electronic benefits transfer (EBT) card transactions.

* Transactions originated from foreign accounts.

Note: Any fees charged to the cards (e.g., monthly transaction fees, dormancy fees) are not considered to be transactions and should be excluded.

Definitions for selected terms can be found in the [Glossary](#) tab.

Please leave no item blank.
*** Enter "0" if an item is zero**
*** Enter "NR" if an item is nonzero but cannot be reported**

Calendar year 2024 general-purpose prepaid card transactions

1	Total transactions <i>Do not include electronic benefits transfer (EBT) card transactions. Do not include card funding transactions, requested separately in questions 9 and 10. Do not include ATM cash withdrawal transactions, requested separately in question 8.</i>	Number Value (\$) Avg. Value (\$)	 NR
1.a	Denials (authorization declined)	Number Value (\$) Avg. Value (\$) % of total transactions (Number)	 NR NR
2	Total authorized transactions = 1 - 1.a	Number Value (\$) Avg. Value (\$)	NR NR NR
2.a	Pre-authorization only (authorized but not settled)	Number Value (\$) Avg. Value (\$) % of total authorized transactions (Number)	 NR NR

3.a	Cash-back at the point of sale	Number Value (\$) Avg. Value (\$) % of net, authorized & settled transactions (Number)	 NR NR
3.b	Chargebacks, adjustments and returns <i>Chargebacks (issuer initiated) typically include customer disputes, fraud, processing errors, authorization issues, or non-fulfillment. Other adjustments and returns (acquirer initiated) include customer return of goods, complaints, merchant-identified fraud, duplicate transaction entries.</i>	Number Value (\$) Avg. Value (\$) % of net, authorized & settled transactions (Number)	 NR NR
4	Net, purchase transactions <i>= 3 - 3.b for Number, = 3 - 3.a - 3.b for Value</i> <i>A point-of-sale (POS) purchase transaction with cash back is counted as one transaction. Do not subtract the number of cash-back transactions. Only subtract the dollar value amount of the cash-back transactions.</i>	Number Value (\$) Avg. Value (\$) % of net, authorized & settled transactions (Number)	NR NR NR NR

Annual Data Entry

5

Among the different subtotals of payment transactions listed above, which would you prefer to use to report more detailed allocations of payment transactions below? If possible, please use 3. *Net, authorized & settled transactions* (the default selection).

Preferred basis for reporting payment transactions

- ☐ 2. Total authorized transactions
- ☒ 3. Net, authorized & settled transactions
- ☐ 4. Net, purchase transactions

Transactions by channel

6

Net, authorized & settled transactions = 6.a + 6.b

Number	NR
Value (\$)	NR
Avg. Value (\$)	NR

6.a

In-person transactions

Transactions the card user initiates by interacting with a physical terminal or other device provided by the merchant or payee, usually with a card or mobile device. Also include card-not-present transactions for which the card user is present at the point of sale (e.g., key-entered transactions). Do not include remote transactions classified as card-present solely because of the level of authentication.

Number	
Value (\$)	
Avg. Value (\$)	NR
% of net, authorized & settled transactions (Number)	NR

6.b

Remote transactions (card user not at merchant location)

Transactions for which the card user does not interact with a physical terminal or other device provided by the merchant or payee. Typically, these include card-not-present transactions. Also include any remote transactions classified as card-present solely because of the level of authentication.

Number	
Value (\$)

Annual Data Entry

Comments:

General-Purpose Prepaid Card Processor Payment Survey

Glossary

Item	Definition
	United States: The states, territories, and possessions of the US, the District of Columbia, the Commonwealth of Puerto Rico, or any political subdivision of any of the foregoing.
1a	Denials/declines: Transaction attempts that receive a denial response by the host authorization system and do not result in an authorized transaction.
2a	Pre-authorization only: Transactions that are approved but not settled (e.g., the initial amount which a rental agency, hotel, or fuel dispenser operator receives authorization, but final payment and amount transfer is never made).
3	Net, authorized & settled transactions: Transactions initiated by the acquirer that are completed with the final payment amount transferred from the acquirer to the issuer. Such transactions include those that are subsequently reversed through a chargeback, or other adjustment or return.
3a	Cash-back at the point of sale: Purchase transactions that include an amount of cash given back to the card user. A point-of-sale (POS) purchase transaction with cash back is counted as one transaction.
3b	Chargebacks: Transactions initiated by the issuer that reverse a transaction, in whole or in part, and transfer value from the acquirer to the issuer (e.g., customer disputes, fraud, processing errors, authorization issues, or non-fulfillment of copy requests). A chargeback provides the issuer with a way to return a disputed transaction, typically on behalf of the cardholder.
3b	Adjustments and returns: Transactions initiated by the acquirer that reverse a transaction, in whole or in part, and transfer value from the acquirer to the issuer (e.g., customer return of goods, complaints, merchant-identified fraud, duplicate transaction entry).
4	Net, purchase transactions: Transactions that have been authorized and settled. Exclude denials, transactions that are pre-authorization only, chargebacks, and other adjustments and returns. For value, also exclude the dollar amount of the cash-back at the point of sale.
11	Total cards: All issued, activated, and unexpired general-purpose prepaid cards (linked to US-domiciled accounts).
11	Active cards: Cards outstanding with a minimum level of purchase activity according to your organization's definition.

The Federal Reserve Payments Study

Electronic Benefits Transfer Card Processor Payment Survey

Survey Period:
Calendar Year 2024

Responding to this collection is voluntary. The Federal Reserve may not conduct or sponsor, and an organization is not required to respond to, a collection of information unless it displays a currently valid OMB control number. Public reporting burden for this collection of information is estimated to be an average of 8 hours per response, including the time to gather and maintain data in the required form, to review the instructions and to complete the information collection. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to: Secretary, Board of Governors of the Federal Reserve System, 20th and C Streets, NW, Washington, DC 20551; and to the Office of Management and Budget, Paperwork Reduction Project (7100-0351), Washington, DC 20503.

Networks, Processors, and Issuers Payments Surveys (NPIPS)

Electronic Benefits Transfer Card Processor Payment Survey

Instructions

About this survey

This survey, part of the NPIPS, covers electronic benefits transfer (EBT) card transactions that your organization processed for calendar year 2024 (CY2024). Allocations of transactions are requested for several category types, including transactions classified as fraudulent by an unauthorized third party. Counts of the number of active and total cards outstanding are also requested.

About the study

This survey and other NPIPS surveys are part of the Federal Reserve Payments Study (FRPS), which is conducted by the Federal Reserve Bank of Atlanta and the Federal Reserve Board. Your response will be used in combination with peer responses to estimate national aggregate volumes for CY2024. Aggregate results will be compared to those of previous studies to track changes and identify trends in US payments.

Confidentiality

Any data you provide for this survey is strictly confidential. Individual responses to the survey will not be shared with the public or the industry.

Your participation

To achieve the most reliable results, it is important that you respond completely and accurately. **If your organization outsourced payments processing to another organization during CY2024, please request the necessary data from that organization or provide them with the survey so they may respond on behalf of your organization.**

>> Please respond by: June 13, 2025 <<

Data entry

Please enter annual data for CY2024 in the **Annual Data Entry** tab (i.e., worksheet). If estimated amounts rather than actual amounts are reported for any item(s), please explain in the comments field at the bottom of the tab. By default, tabs are protected and only cells needed for data entry are unlocked.

1. Direct data entry (light blue boxes). For numeric data, key in the actual number or dollar amount.

Note: Items left blank can be difficult to interpret and may generate follow-up questions. If a positive amount cannot be provided, please consider entering one of these alternatives:

- * Enter "0" if the requested item is known to be zero. (This is appropriate for items that are not applicable to your organization.)
- * Enter "NR" (not reported/not reportable) if the requested item is known to be nonzero but cannot be reported.

Example

2. Automatic entry of calculations or repeated figures (dark blue box). Cells are protected, but different amounts may be entered into the override cells to the right (yellow box), if necessary. Only positive numeric amounts are valid for override cells.

(Automatic entry cells display "NR" until required information is provided.)

Example

3. Option button selection. Click on the button with the option you would like to choose.

(In the example to the right, Option 1 is the default selection.)

Example

Unexpected condition flags

As you fill out the survey, flags may be raised describing the results of simple arithmetic comparisons. These are intended to help you identify potential mistakes and, if appropriate, correct them. However, it may not always be appropriate to revise data when flags are raised, and you may choose to leave your response data as is. If that happens, please provide feedback and explanations in the comments field at the bottom of each tab. Your comments may help us understand your data and avoid the need for follow up.

Conditions that can raise a flag include:

1. **Logical inconsistencies:** These check for essential arithmetical relationships among items based on survey definitions and structure. They include adding-up conditions for items and their sub-items, pairing of zeros with nonzeros, and entry of NR when a known amount is implied by other reported item amounts.

Note: Leaving items blank will not throw flags. However, consistency problems may still exist when the amount is left blank but is implied by other related item amounts. Such cases can be checked by entering NR when an item is not reported/not reportable. If possible, please review your survey workbooks for any blank data-entry cells and replace them before submitting.

2. **Exceeding set boundaries:** These compare against lower and upper boundaries for averages and ratios. The boundaries are intended to allow a wide range, but may not be appropriate for your organization.

Examples

Item in Q3 is not equal to the sum of subitems: $Q3 > Q3.a + Q3.b$.
Inconsistent pair: Q3 Balance (\$) cannot be 0 if Q3 Number is nonzero.
Item should be reportable if all related items (Q2, Q2.b) are reported.

Example

This average value is unusually low.

Glossary

Definitions for selected terms can be found in the **Glossary** tab.

Submitting the completed survey

Submitted via Intralinks:

Please have your organization's Study Coordinator that established access to an Intralinks account submit this and any other survey workbooks.

To submit your completed survey, log in to your organization's Intralinks account where you will see a folder labeled with a unique numeric identifier assigned to your organization. Within this folder are two subfolders – one for submitting your data and the other for retrieving data that we may send you. Locate the Submit Data folder, and upload your completed survey workbooks on the encrypted Intralinks platform. Once we receive notification of your submission, acknowledgement of receipt will be sent to you from FRPSCommunications@atl.frb.org.

Networks, Processors, and Issuers Payments Surveys (NPIPS)

Questions?

If you have questions about the survey content or need assistance with the submission process, please contact the Federal Reserve Payments Study team at www.paymentsstudy.com.

Comments

Please provide any feedback and suggestions about the survey or submission process in the box below:

Annual Data Entry

Please report data on electronic benefits transfer (EBT) card transactions and related information for calendar year 2024. Responding completely and accurately will help ensure accuracy of the aggregate estimates.

Include:

- * Only EBT cards and transactions to access funds and/or make purchases at approved merchants in accordance with US government-administered program rules for SNAP, TANF, WIC, and cash benefits
- * Purchases and cash-back at the point of sale
- * ATM withdrawals and other payments using EBT cards for which your organization was the processor

Do not include:

- * General-purpose (i.e., network-branded Visa, MC, Amex, Discover) credit, debit, or prepaid card transactions
- * Private-label credit or prepaid card transactions

Definitions for selected terms can be found in the [Glossary](#) tab.

Please leave no item blank.
*** Enter "0" if an item is zero**
*** Enter "NR" if an item is nonzero but cannot be reported**

Calendar year 2024 EBT card transactions

Comments:

Electronic Benefits Transfer Card Processor Payment Survey

Glossary

Item	Definition
	United States: The states, territories, and possessions of the US, the District of Columbia, the Commonwealth of Puerto Rico, or any political subdivision of any of the foregoing
1a	Denials/declines: Transaction attempts that receive a denial response by the host authorization system and do not result in an authorized transaction.
2a	Pre-authorization only: Transactions that are approved but not settled (e.g., the initial amount receives authorization, but final payment and amount transfer is never made).
3	Net, authorized & settled transactions: Transactions initiated by the acquirer that are completed with the final payment amount transferred from the acquirer to the issuer. Such transactions include those that are subsequently reversed through a chargeback, or other adjustment or return.
3a	Cash-back at the point of sale: Purchase transactions that include an amount of cash given back to the card user. For EBT, these are often treated as separate transactions.
4	Net, purchase transactions: Purchase transactions that have been authorized and settled. Exclude denials, transactions that are pre-authorization only, separate cash-back at the point of sale, ATM cash withdrawals, chargebacks, other adjustments and returns.
9a	Lost or stolen card: Fraudulent transactions via a card reported as lost or stolen.
9b	Card issued but not received: Fraudulent transactions reported to be via an intercepted new or replacement card in transit that was activated by someone other than the cardholder.
9c	Fraudulent application: Fraudulent transactions reported to be via a new card that was issued to someone other than the cardholder using falsified information or a stolen identity.
9d	Counterfeit card: Fraudulent in-person transactions via an altered or cloned card.
9e	Fraudulent use of account number: Fraudulent transactions using account number and other card and cardholder details, typically remotely.
9f	Other (including account takeover): All other fraudulent transactions not included the above categories. In particular, "other" covers account takeover, a form of identity theft whereby an unauthorized party gains access to and use of an existing card account.
11	Total cards: All issued, activated, and unexpired EBT cards (linked to US-domiciled accounts).
11	Active cards: Cards outstanding with a minimum level of purchase activity according to your organization's definition.

The Federal Reserve Payments Study

Private-Label Prepaid Card Issuer and Processor Payment Survey

Survey Period:
Calendar Year 2024

Responding to this collection is voluntary. The Federal Reserve may not conduct or sponsor, and an organization is not required to respond to, a collection of information unless it displays a currently valid OMB control number. Public reporting burden for this collection of information is estimated to be an average of 8 hours per response, including the time to gather and maintain data in the required form, to review the instructions and to complete the information collection. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to: Secretary, Board of Governors of the Federal Reserve System, 20th and C Streets, NW, Washington, DC 20551; and to the Office of Management and Budget, Paperwork Reduction Project (7100-0351), Washington, DC 20503.

Networks, Processors, and Issuers Payments Surveys (NPIPS)

Private-Label Prepaid Card Issuer and Processor Payment Survey

Instructions

About this survey

This survey, part of the NPIPS, covers private-label prepaid card transactions (for both payment and card funding) that your organization processed in-house for calendar year 2024 (CY2024). Allocations of transactions are requested for several category types, including transactions classified as fraudulent by an unauthorized third party. Counts of the number of active and total cards (including both physical and virtual cards) that are issued and/or processed by your organization and outstanding are also requested.

About the study

This survey and other NPIPS surveys are part of the Federal Reserve Payments Study (FRPS), which is conducted by the Federal Reserve Bank of Atlanta and the Federal Reserve Board. Your response will be used in combination with peer responses to estimate national aggregate volumes for CY2024. Aggregate results will be compared to those of previous studies to track changes and identify trends in US payments.

Confidentiality

Any data you provide for this survey is strictly confidential. Individual responses to the survey will not be shared with the public or the industry.

Your participation

To achieve the most reliable results, it is important that you respond completely and accurately. **If your organization outsourced payments processing to another organization during CY2024, please request the necessary data from that organization or provide them with the survey so they may respond on behalf of your organization.**

>> Please respond by: June 13, 2025 <<

Data entry

Please enter annual data for CY2024 in the **Annual Data Entry** tab (i.e., worksheet). If estimated amounts rather than actual amounts are reported for any item(s), please explain in the comments field at the bottom of the tab. By default, tabs are protected and only cells needed for data entry are unlocked.

1. Direct data entry (light blue boxes). For numeric data, key in the actual number or dollar amount.

Note: Items left blank can be difficult to interpret and may generate follow-up questions. If a positive amount cannot be provided, please consider entering one of these alternatives:
* Enter "0" if the requested item is known to be zero. (This is appropriate for items that are not applicable to your organization.)
* Enter "NR" (not reported/not reportable) if the requested item is known to be nonzero but cannot be reported.
2. Automatic entry of calculations or repeated figures (dark blue box). Cells are protected, but different amounts may be entered into the override cells to the right (yellow box), if necessary. Only positive numeric amounts are valid for override cells.
(Automatic entry cells display "NR" until required information is provided.)
3. Option button selection. Click on the button with the option you would like to choose.
(In the example to the right, Option 1 is the default selection.)

Override

Example

Option 1

Option 2

Unexpected condition flags

As you fill out the survey, flags may be raised describing the results of simple arithmetic comparisons. These are intended to help you identify potential mistakes and, if appropriate, correct them. However, it may not always be appropriate to revise data when flags are raised, and you may choose to leave your response data as is. If that happens, please provide feedback and explanations in the comments field at the bottom of each tab. Your comments may help us understand your data and avoid the need for follow up.

Conditions that can raise a flag include:

1. **Logical inconsistencies:** These check for essential arithmetical relationships among items based on survey definitions and structure. They include adding-up conditions for items and their sub-items, pairing of zeros with nonzeros, and entry of NR when a known amount is implied by other reported item amounts.

Note: Leaving items blank will not throw flags. However, consistency problems may still exist when the amount is left blank but is implied by other related item amounts. Such cases can be checked by entering NR when an item is not reported/not reportable. If possible, please review your survey workbooks for any blank data-entry cells and replace them before submitting.
2. **Exceeding set boundaries:** These compare against lower and upper boundaries for averages and ratios. The boundaries are intended to allow a wide range, but may not be appropriate for your organization.

Examples

Item in Q3 is not equal to the sum of subitems: Q3 > Q3.a + Q3.b.

Inconsistent pair: Q3 Balance (\$) cannot be 0 if Q3 Number is nonzero.

Item should be reportable if all related items (Q2, Q2.b) are reported.

Example

This average value is unusually low.

Glossary

Definitions for selected terms can be found in the **Glossary** tab.

Submitting the completed survey

Submitted via Intralinks:

Please have your organization's Study Coordinator that established access to an Intralinks account submit this and any other survey workbooks.

To submit your completed survey, log in to your organization's Intralinks account where you will see a folder labeled with a unique numeric identifier assigned to your organization. Within this folder are two subfolders – one for submitting your data and the other for retrieving data that we may send you. Locate the Submit Data folder, and upload your completed survey workbooks on the encrypted Intralinks platform. Once we receive notification of your submission, acknowledgement of receipt will be sent to you from FRPSCommunications@atl.frb.org.

Questions?

If you have questions about the survey content or need assistance with the submission process, please contact the Federal Reserve Payments Study team at www.paymentsstudy.com.

Networks, Processors, and Issuers Payments Surveys (NPIPS)
Private-Label Prepaid Card Issuer and Processor Payment Survey
Instructions

Comments

Please provide any feedback and suggestions about the survey or submission process in the box below:

Annual Data Entry

Please report data on private-label prepaid card transactions and related information for calendar year 2024. Responding completely and accurately will help ensure accuracy of the aggregate estimates.

Include:

- * Only private-label prepaid cards and transactions under a single merchant brand or group of brands
- * Transactions on a closed loop point-of-sale system used at your retail stores or online establishments
- * Reloadable and non-reloadable cards and transactions
- * Cards and transactions for accounts domiciled in the United States
- * Physical or virtual prepaid cards

Do not include:

- * General-purpose (i.e., network-branded Visa, MC, Amex, Discover) credit, debit, or prepaid card transactions
- * Transactions for which your organization was only the receivables owner but not the transaction processor
- * Any fees charged to the prepaid card accounts (e.g., monthly transaction fees, dormancy fees)
- * Transactions originated from foreign accounts
- * Card funding transactions (requested separately in question 9)

Definitions for selected terms can be found in the [Glossary](#) tab.

Please leave no item blank.
* Enter "0" if an item is zero
* Enter "NR" if an item is nonzero
but cannot be reported

Calendar year 2024 private-label prepaid card transactions

Virtual cards

[10](#)

Please indicate if your organization issued or processed transactions for virtual private-label prepaid cards during calendar year 2024.

A virtual card is a digital representation of a private-label prepaid card that does not exist in physical form. Typically stored in a digital wallet for online, in-app, or in-person purchases with a mobile device (using NFC or barcode scanner). Do not count individual tokenized transactions as virtual cards.

Private-Label Prepaid Card Issuer and Processor Payment Survey

Glossary

Item	Definition
	United States: The states, territories, and possessions of the US, the District of Columbia, the Commonwealth of Puerto Rico, or any political subdivision of any of the foregoing.
	Virtual cards: A virtual card is a digital representation of a private-label prepaid card that does not exist in physical form. Typically stored in a digital wallet for online, in-app, or in-person purchases with a mobile device (using NFC or barcode scanner). Do not count individual tokenized transactions as virtual cards.
1a	Denials/declines: Transaction attempts that receive a denial response by the host authorization system and do not result in an authorized transaction.
2a	Pre-authorization only: Transactions that are temporarily authorized but not completed or posted, or the portion of authorized amounts that are not included in a final posting.
3	Completed transactions: Purchase transactions (including any cash-back) that are completed and posted to the private-label card account for payment. Such transactions include those that are subsequently reversed in an adjustment or return requested by the merchant or cardholder, defined below.
3a	Cash-back at the point of sale: Purchase transactions that include an amount of cash given back to the card user. A point-of-sale (POS) purchase transaction with cash back is counted as one transaction.
3b	Adjustments and returns: Completed and posted transactions that are subsequently reversed, in whole or in part, and that transfer value back to the card account (e.g., customer return of goods, complaints, disputed charges, fraud, duplicate transaction entry).
4	Net, purchase transactions: Completed purchase transactions that have not been reversed. Exclude denials, transactions that are pre-authorization only, and adjustments and returns defined above. For value, also exclude the dollar amount of the cash-back at the point of sale.
8a	Lost or stolen card: Fraudulent transactions via a card reported as lost or stolen.
8b	Card issued but not received: Fraudulent transactions reported to be via an intercepted new or replacement card in transit that was activated by someone other than the cardholder.
8c	Fraudulent application: Fraudulent transactions reported to be via a new card that was issued to someone other than the cardholder using falsified information or a stolen identity.
8d	Counterfeit card: Fraudulent in-person transactions via an altered or cloned card.
8e	Fraudulent use of account number: Fraudulent transactions using account number and other card and cardholder details, typically remotely.
8f	Other (including account takeover): All other fraudulent transactions not included the above categories. In particular, "other" covers account takeover, a form of identity theft whereby an unauthorized party gains access to and use of an existing card account.

Private-Label Prepaid Card Issuer and Processor Payment Survey

Glossary

Item	Definition
11	Total cards: All issued, activated, and unexpired private-label prepaid cards (linked to US-domiciled accounts).
11	Active cards: Private-label prepaid cards outstanding with a minimum level of purchase activity according to your organization's definition.
11b	Physical cards: A physical private-label prepaid card with a magstripe and/or chip that is issued to the customer for making purchases in person.

The Federal Reserve Payments Study

Person-to-Person and Money Transfer Processor Payment Survey

Survey Period:
Calendar Year 2024

Responding to this collection is voluntary. The Federal Reserve may not conduct or sponsor, and an organization is not required to respond to, a collection of information unless it displays a currently valid OMB control number. Public reporting burden for this collection of information is estimated to be an average of 8 hours per response, including the time to gather and maintain data in the required form, to review the instructions and to complete the information collection. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to: Secretary, Board of Governors of the Federal Reserve System, 20th and C Streets, NW, Washington, DC 20551; and to the Office of Management and Budget, Paperwork Reduction Project (7100-0351), Washington, DC 20503.

Networks, Processors, and Issuers Payments Surveys (NPIPS)

Person-to-Person and Money Transfer Processor Payment Survey

Instructions

About this survey

This survey, part of the NPIPS, covers person-to-person (P2P) and money transfer transactions that your organization processed for calendar year 2024 (CY2024). Allocations of transactions are requested for several category types, including transactions classified as fraudulent by an unauthorized third party.

About the study

This survey and other NPIPS surveys are part of the Federal Reserve Payments Study (FRPS), which is conducted by the Federal Reserve Bank of Atlanta and the Federal Reserve Board. Your response will be used in combination with peer responses to estimate national aggregate volumes for CY2024. Aggregate results will be compared to those of previous studies to track changes and identify trends in US payments.

Confidentiality

Any data you provide for this survey is strictly confidential. Individual responses to the survey will not be shared with the public or the industry.

Your participation

To achieve the most reliable results, it is important that you respond completely and accurately. **If your organization outsourced payments processing to another organization during CY2024, please request the necessary data from that organization or provide them with the survey so they may respond on behalf of your organization.**

>> Please respond by: June 13, 2025 <<

Data entry

Please enter annual data for CY2024 in the **Annual Data Entry** tab (i.e., worksheet). If estimated amounts rather than actual amounts are reported for any item(s), please explain in the comments field at the bottom of the tab. By default, tabs are protected and only cells needed for data entry are unlocked.

1. Direct data entry (light blue boxes). For numeric data, key in the actual number or dollar amount.

Note: Items left blank can be difficult to interpret and may generate follow-up questions. If a positive amount cannot be provided, please consider entering one of these alternatives:

 - * Enter "0" if the requested item is known to be zero. (This is appropriate for items that are not applicable to your organization.)
 - * Enter "NR" (not reported/not reportable) if the requested item is known to be nonzero but cannot be reported.
2. Automatic entry of calculations or repeated figures (dark blue box). Cells are protected, but different amounts may be entered into the override cells to the right (yellow box), if necessary. Only positive numeric amounts are valid for override cells.

(Automatic entry cells display "NR" until required information is provided.)

Example

Example

NR

Override

Unexpected condition flags

As you fill out the survey, flags may be raised describing the results of simple arithmetic comparisons. These are intended to help you identify potential mistakes and, if appropriate, correct them. However, it may not always be appropriate to revise data when flags are raised, and you may choose to leave your response data as is. If that happens, please provide feedback and explanations in the comments field at the bottom of each tab. Your comments may help us understand your data and avoid the need for follow up. Conditions that can raise a flag include:

1. **Logical inconsistencies:** These check for essential arithmetical relationships among items based on survey definitions and structure. They include adding-up conditions for items and their sub-items, pairing of zeros with nonzeros, and entry of NR when a known amount is implied by other reported item amounts.

Note: Leaving items blank will not throw flags. However, consistency problems may still exist when the amount is left blank but is implied by other related item amounts. Such cases can be checked by entering NR when an item is not reported/not reportable. If possible, please review your survey workbooks for any blank data-entry cells and replace them before submitting.
2. **Exceeding set boundaries:** These compare against lower and upper boundaries for averages and ratios. The boundaries are intended to allow a wide range, but may not be appropriate for your organization.

Examples

Item in Q3 is not equal to the sum of subitems: Q3 > Q3.a + Q3.b.
Inconsistent pair: Q3 Balance (\$) cannot be 0 if Q3 Number is nonzero.
Item should be reportable if all related items (Q2, Q2.b) are reported.

Example

This average value is unusually low.

Glossary

Definitions for selected terms can be found in the **Glossary** tab.

Submitting the completed survey

Submitted via Intralinks:

Please have your organization's Study Coordinator that established access to an Intralinks account submit this and any other survey workbooks.

To submit your completed survey, log in to your organization's Intralinks account where you will see a folder labeled with a unique numeric identifier assigned to your organization. Within this folder are two subfolders – one for submitting your data and the other for retrieving data that we may send you. Locate the Submit Data folder, and upload your completed survey workbooks on the encrypted Intralinks platform. Once we receive notification of your submission, acknowledgement of receipt will be sent to you from FRPSCommunications@atl.frb.org.

Questions?

If you have questions about the survey content or need assistance with the submission process, please contact the Federal Reserve Payments Study team at www.paymentsstudy.com.

Please provide any feedback and suggestions about the survey or submission process in the box below:

Person-to-Person and Money Transfer Processor Payment Survey

2024 Data

Annual Data Entry

Please report data on person-to-person (P2P) and money transfer transactions and related information for calendar year 2024. Responding completely and accurately will help ensure accuracy of the aggregate estimates.

Include:

- * Only transactions originated on your P2P or money transfer system, including those received on another system
- * Funds transfers typically between individuals, usually feature an online system, agent, email or mobile-phone-based system

Do not include:

- * Transactions made from non-US-domiciled accounts to US payees (requested separately in questions 8 and 13)

Note: P2P & Money Transfers are generally initiated by the payer (i.e., "push" transactions). Sometimes a transfer requires an action by the payee to receive the transfer, such as an acceptance or request (i.e., a "pull" transaction). Do not count the receipt or pull of a transaction separately from its origination or push, or count a transaction originated on another system and received on yours. *If you cannot separate the originated transactions on your system from the available data, please provide your estimate of the P2P and money transfer transactions originated on your system and indicate that it is an estimate in the comment box at the bottom of this sheet.*

Definitions for selected terms can be found in the [Glossary](#) tab.

Please leave no item blank.
*** Enter "0" if an item is zero**
*** Enter "NR" if an item is nonzero but cannot be reported**

The Federal Reserve Payments Study

Online Bill Payment Processor Survey

Survey Period:
Calendar Year 2024

Responding to this collection is voluntary. The Federal Reserve may not conduct or sponsor, and an organization is not required to respond to, a collection of information unless it displays a currently valid OMB control number. Public reporting burden for this collection of information is estimated to be an average of 8 hours per response, including the time to gather and maintain data in the required form, to review the instructions and to complete the information collection. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to: Secretary, Board of Governors of the Federal Reserve System, 20th and C Streets, NW, Washington, DC 20551; and to the Office of Management and Budget, Paperwork Reduction Project (7100-0351), Washington, DC 20503.

Networks, Processors, and Issuers Payments Surveys (NPIPS)

Online Bill Payment Processor Survey

Instructions

About this survey

This survey, part of the NPIPS, covers online bill payments that your organization processed for calendar year 2024 (CY2024). Allocations of transactions are requested for several category types, including transactions classified as fraudulent by an unauthorized third party.

About the study

This survey and other NPIPS surveys are part of the Federal Reserve Payments Study (FRPS), which is conducted by the Federal Reserve Bank of Atlanta and the Federal Reserve Board. Your response will be used in combination with peer responses to estimate national aggregate volumes for CY2024. Aggregate results will be compared to those of previous studies to track changes and identify trends in US payments.

Confidentiality

Any information you provide for this survey is strictly confidential. Individual responses to the survey will not be shared with the public or the industry.

Your participation

To achieve the most reliable results, it is important that you respond completely and accurately. If your organization outsourced payments processing to another organization during CY2024, please request the necessary data from that organization or provide them with the survey so they may respond on behalf of your organization

>> Please respond by: June 13, 2025 <<

Data entry

Please enter annual data for CY2024 in the Annual Data Entry tab (i.e., worksheet). If estimated amounts rather than actual amounts are reported for any item(s), please explain in the comments field at the bottom of the tab. By default, tabs are protected and only cells needed for data entry are unlocked.

- 1. Direct data entry (light blue boxes). For numeric data, key in the actual number or dollar amount.
Note: Items left blank can be difficult to interpret and may generate follow-up questions. If a positive amount cannot be provided, please consider entering one of these alternatives:
* Enter "0" if the requested item is known to be zero. (This is appropriate for items that are not applicable to your organization.)
* Enter "NR" (not reported/not reportable) if the requested item is known to be nonzero but cannot be reported.
- 2. Automatic entry of calculations or repeated figures (dark blue box). Cells are protected, but different amounts may be entered into the override cells to the right (yellow box), if necessary. Only positive numeric amounts are valid for override cells.
(Automatic entry cells display "NR" until required information is provided.)

NR

Unexpected condition flags

As you fill out the survey, flags may be raised describing the results of simple arithmetic comparisons. These are intended to help you identify potential mistakes and, if appropriate, correct them. However, it may not always be appropriate to revise data when flags are raised, and you may choose to leave your response data as is. If that happens, please provide feedback and explanations in the comments field at the bottom of each tab. Your comments may help us understand your data and avoid the need for follow up.

Conditions that can raise a flag include:

- 1. Logical inconsistencies: These check for essential arithmetical relationships among items based on survey definitions and structure. They include adding-up conditions for items and their sub-items, pairing of zeros with nonzeros, and entry of NR when a known amount is implied by other reported item amounts.
Note: Leaving items blank will not throw flags. However, consistency problems may still exist when the amount is left blank but is implied by other related item amounts. Such cases can be checked by entering NR when an item is not reported/not reportable. If possible, please review your survey workbooks for any blank data-entry cells and replace them before submitting.
- 2. Exceeding set boundaries: These compare against lower and upper boundaries for averages and ratios. The boundaries are intended to allow a wide range, but may not be appropriate for your organization.

When a form is complete, if possible please provide any explanations you may have for any remaining flags in the comments field at the bottom of each tab in the workbook. This will assist us to review and validate your data after the form is submitted. We may follow up with validation questions after the review is completed. Please review your survey workbooks for any empty cells before submitting.

Glossary

Definitions for selected terms can be found in the Glossary tab.

Submitting the completed survey

Submitted via Intralinks:

Please have your organization's Study Coordinator that established access to an Intralinks account submit this and any other survey workbooks.

To submit your completed survey, log in to your organization's Intralinks account where you will see a folder labeled with a unique numeric identifier assigned to your organization. Within this folder are two subfolders – one for submitting your data and the other for retrieving data that we may send you. Locate the Submit Data folder, and upload your completed survey workbooks on the encrypted Intralinks platform. Once we receive notification of your submission, acknowledgement of receipt will be sent to you from FRPSCommunications@atl.frb.org.

Questions?

If you have questions about the survey content or need assistance with the submission process, please contact the Federal Reserve Payments Study team at www.paymentsstudy.com.

Examples

Item in Q3 is not equal to the sum of subitems: Q3 > Q3.a + Q3.b.
Inconsistent pair: Q3 Balance (\$) cannot be 0 if Q3 Number is nonzero.
Item should be reportable if all related items (Q2, Q2.b) are reported.

Example

This average value is unusually low.

Online Bill Payment Processor Survey

2024 Data

Annual Data Entry

Please report data on online bill payments and related information for calendar year 2024. Responding completely and accurately will help ensure accuracy of the aggregate estimates.

Include:

* Transactions originated through a financial institution or other intermediary's online bill payment portal (i.e., bank online bill payments) and directly via biller websites (i.e., biller-direct bill payments)

* Only include transactions originated from US-domiciled accounts

* Only transaction totals for the individual bills within a batch of bills that were settled through a single combined payment to the biller (i.e., check and list payments)

Do not include:

* Batch transactions because this will double count the individual bill totals

* Declined transactions

Please leave no item blank.
* Enter "0" if an item is zero
* Enter "NR" if an item is nonzero
but cannot be reported

Definitions for selected terms can be found in the [Glossary](#) tab.

Networks, Processors, and Issuers Payments Surveys (NPIPS)

Walk-In Bill Payment Processor Survey

Instructions

About this survey

This survey, part of the NPIPS, covers walk-in bill payment transactions that your organization processed for calendar year 2024 (CY2024). Allocations of transactions are requested for several category types, including transactions classified as fraudulent by an unauthorized third party. Counts of the number of active and total cards (including both physical and virtual cards) carrying your organization's network brand that are issued and outstanding are also requested.

About the study

This survey and other NPIPS surveys are part of the Federal Reserve Payments Study (FRPS), which is conducted by the Federal Reserve Bank of Atlanta and the Federal Reserve Board. Your response will be used in combination with peer responses to estimate national aggregate volumes for CY2024. Aggregate results will be compared to those of previous studies to track changes and identify trends in US payments.

Confidentiality

Any data you provide for this survey is strictly confidential. Individual responses to the survey will not be shared with the public or the industry.

Your participation

To achieve the most reliable results, it is important that you respond completely and accurately. **If your organization outsourced payments processing to another organization during CY2024, please request the necessary data from that organization or provide them with the survey so they may respond on behalf of your organization.**

>> Please respond by: June 13, 2025 <<

Data entry

Please enter annual data for CY2024 in the **Annual Data Entry** tab (i.e., worksheet). If estimated amounts rather than actual amounts are reported for any item(s), please explain in the comments field at the bottom of the tab. By default, tabs are protected and only cells needed for data entry are unlocked.

1. Direct data entry (light blue boxes). For numeric data, key in the actual number or dollar amount.
Note: Items left blank can be difficult to interpret and may generate follow-up questions. If a positive amount cannot be provided, please consider entering one of these alternatives:
* Enter "0" if the requested item is known to be zero. (This is appropriate for items that are not applicable to your organization.)
* Enter "NR" (not reported/not reportable) if the requested item is known to be nonzero but cannot be reported.
2. Automatic entry of calculations or repeated figures (dark blue box). Cells are protected, but different amounts may be entered into the override cells to the right (yellow box), if necessary. Only positive numeric amounts are valid for override cells.
(Automatic entry cells display "NR" until required information is provided.)

Unexpected condition flags

As you fill out the survey, flags may be raised describing the results of simple arithmetic comparisons. These are intended to help you identify potential mistakes and, if appropriate, correct them. However, it may not always be appropriate to revise data when flags are raised, and you may choose to leave your response data as is. If that happens, please provide feedback and explanations in the comments field at the bottom of each tab. Your comments may help us understand your data and avoid the need for follow up. Conditions that can raise a flag include:

1. **Logical inconsistencies:** These check for essential arithmetical relationships among items based on survey definitions and structure. They include adding-up conditions for items and their sub-items, pairing of zeros with nonzeros, and entry of NR when a known amount is implied by other reported item amounts.
Note: Leaving items blank will not throw flags. However, consistency problems may still exist when the amount is left blank but is implied by other related item amounts. Such cases can be checked by entering NR when an item is not reported/not reportable. If possible, please review your survey workbooks for any blank data-entry cells and replace them before submitting.
2. **Exceeding set boundaries:** These compare against lower and upper boundaries for averages and ratios. The boundaries are intended to allow a wide range, but may not be appropriate for your organization.

Examples

Item in Q3 is not equal to the sum of subitems: Q3 > Q3.a + Q3.b.
Inconsistent pair: Q3 Balance (\$) cannot be 0 if Q3 Number is nonzero.
Item should be reportable if all related items (Q2, Q2.b) are reported.

Example

This average value is unusually low.

Glossary

Definitions for selected terms can be found in the **Glossary** tab.

Submitting the completed survey

Submitted via Intralinks:

Please have your organization's Study Coordinator that established access to an Intralinks account submit this and any other survey workbooks.

To submit your completed survey, log in to your organization's Intralinks account where you will see a folder labeled with a unique numeric identifier assigned to your organization. Within this folder are two subfolders – one for submitting your data and the other for retrieving data that we may send you. Locate the Submit Data folder, and upload your completed survey workbooks on the encrypted Intralinks platform. Once we receive notification of your submission, acknowledgement of receipt will be sent to you from FRPSCommunications@atl.frb.org.

Questions?

If you have questions about the survey content or need assistance with the submission process, please contact the Federal Reserve Payments Study team at www.paymentsstudy.com.

Networks, Processors, and Issuers Payments Surveys (NPIPS)
Walk-In Bill Payment Processor Survey
Instructions

Comments

Please provide any feedback and suggestions about the survey or submission process in the box below:

Annual Data Entry

Please report data on walk-in bill payments and related information for calendar year 2024. Responding completely and accurately will help ensure accuracy of the aggregate estimates.

Include:

- * Transactions that originated from US-domiciled accounts and were made in-person that your organization received or processed on behalf of billers
- * Only payments made at locations (e.g., kiosks, ATMs, agents, or retailers) other than those operated by the biller
- * Only transaction totals for the individual bills within a batch of bills that were settled through a single combined payment to the biller (i.e., check and list payments)

Do not include:

- * Online, mail, or telephone bill payments
- * In-person bill payments made at locations operated by the biller or bill payments originated from foreign accounts
- * Batch transactions because this will double count the individual bill totals
- * Declined transactions

Please leave no item blank.
* Enter "0" if an item is zero
* Enter "NR" if an item is nonzero
but cannot be reported

Definitions for selected terms can be found in the [Glossary](#) tab.

The Federal Reserve

Payments Study

Private-Label ACH Debit Card Processor Payment Survey

Survey Period:
Calendar Year 2024

Responding to this collection is voluntary. The Federal Reserve may not conduct or sponsor, and an organization is not required to respond to, a collection of information unless it displays a currently valid OMB control number. Public reporting burden for this collection of information is estimated to be an average of 8 hours per response, including the time to gather and maintain data in the required form, to review the instructions and to complete the information collection. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to: Secretary, Board of Governors of the Federal Reserve System, 20th and C Streets, NW, Washington, DC 20551; and to the Office of Management and Budget, Paperwork Reduction Project (7100-0351), Washington, DC 20503.

Networks, Processors, and Issuers Payments Surveys (NPIPS)

Private-Label ACH Debit Card Processor Payment Survey

Instructions

About this survey

This survey, part of the NPIPS, covers private-label ACH debit card transactions that your organization processed in-house for calendar year 2024 (CY2024). Allocations of transactions are requested for several category types, including transactions classified as fraudulent by an unauthorized third party.

About the study

This survey and other NPIPS surveys are part of the Federal Reserve Payments Study (FRPS), which is conducted by the Federal Reserve Bank of Atlanta and the Federal Reserve Board. Your response will be used in combination with peer responses to estimate national aggregate volumes for CY2024. Aggregate results will be compared to those of previous studies to track changes and identify trends in US payments.

Confidentiality

Any data you provide for this survey is strictly confidential. Individual responses to the survey will not be shared with the public or the industry.

Your participation

To achieve the most reliable results, it is important that you respond completely and accurately. If your organization outsourced payments processing to another organization during CY2024, please request the necessary data from that organization or provide them with the survey so they may respond on behalf of your organization

>> Please respond by: June 13, 2025 <<

Data entry

Please enter annual data for CY2024 in the Annual Data Entry tab (i.e., worksheet). If estimated amounts rather than actual amounts are reported for any item(s), please explain in the comments field at the bottom of the tab. By default, tabs are protected and only cells needed for data entry are unlocked.

1. Direct data entry (light blue boxes). For numeric data, key in the actual number or dollar amount.

Note: Items left blank can be difficult to interpret and may generate follow-up questions. If a positive amount cannot be provided, please consider entering one of these alternatives:

* Enter "0" if the requested item is known to be zero. (This is appropriate for items that are not applicable to your organization.)

* Enter "NR" (not reported/not reportable) if the requested item is known to be nonzero but cannot be reported.
2. Automatic entry of calculations or repeated figures (dark blue box). Cells are protected, but different amounts may be entered into the override cells to the right (yellow box), if necessary. Only positive numeric amounts are valid for override cells.

(Automatic entry cells display "NR" until required information is provided.)

Example

Example

Override

Unexpected condition flags

As you fill out the survey, flags may be raised describing the results of simple arithmetic comparisons. These are intended to help you identify potential mistakes and, if appropriate, correct them. However, it may not always be appropriate to revise data when flags are raised, and you may choose to leave your response data as is. If that happens, please provide feedback and explanations in the comments field at the bottom of each tab. Your comments may help us understand your data and avoid the need for follow up.

Conditions that can raise a flag include:

1. Logical inconsistencies: These check for essential arithmetical relationships among items based on survey definitions and structure. They include adding-up conditions for items and their sub-items, pairing of zeros with nonzeros, and entry of NR when a known amount is implied by other reported item amounts.

Note: Leaving items blank will not throw flags. However, consistency problems may still exist when the amount is left blank but is implied by other related item amounts. Such cases can be checked by entering NR when an item is not reported/not reportable. If possible, please review your survey workbooks for any blank data-entry cells and replace them before submitting.
2. Exceeding set boundaries: These compare against lower and upper boundaries for averages and ratios. The boundaries are intended to allow a wide range, but may not be appropriate for your organization.

Examples

Item in Q3 is not equal to the sum of subitems: Q3 > Q3.a + Q3.b.
Inconsistent pair: Q3 Balance (\$) cannot be 0 if Q3 Number is nonzero.
Item should be reportable if all related items (Q2, Q2.b) are reported.

Example

This average value is unusually low.

2024 Data

Annual Data Entry

Please report data on private-label ACH debit card transactions and related information for calendar year 2024. Responding completely and accurately will help ensure accuracy of the aggregate estimates.

Include:

* Transactions that originated from US-domiciled accounts and were made with private-label (merchant-branded) payment cards for which the ACH system was used to settle daily card transactions, whether individually or on an aggregated basis, from a cardholder deposit account linked to the card account (i.e., decoupled debit transactions)

Do not include:

* Transactions on prepaid cards or transactions on payment cards through which credit was routinely extended to cardholders for more than one business day before an attempt was made to settle with cardholders

* Transactions that originated from foreign accounts

Please leave no item blank.
***Enter "0" if an item is zero**
***Enter "NR" if an item is nonzero**
but cannot be reported

Definitions for selected terms can be found in the [Glossary](#) tab.

Private-Label ACH Debit Card Processor Payment Survey

Glossary

Item	Definition
	United States: The states, territories, and possessions of the US, the District of Columbia, the Commonwealth of Puerto Rico, or any political subdivision of any of the foregoing.
1a	Denials/declines: Transaction attempts that receive a denial response by the host authorization system and do not result in an authorized transaction.
2	Completed transactions: Purchase transactions (including any cash-back) that are completed and posted to the private-label card account for payment. Such transactions include those that are subsequently reversed in an adjustment or return requested by the merchant or cardholder, defined below.
2a	Cash-back at the point of sale: Purchase transactions that include an amount of cash given back to the card user.
2b.1	ACH returns: Transactions that are initiated by the receiver that reverse a purchase transaction, in whole or in part using ACH return codes for NSF, account not found, customer disputes, unauthorized, fraudulent or processing errors.
2b.2	Other adjustments and returns: Transactions initiated by the originator that reverse a purchase transaction, in whole or in part (e.g., the return of goods by the cardholder), and transfer value from the receiver back to the originator.
3	Net, purchase transactions: Transactions that have been authorized and settled. Exclude denials, ACH returns, and other adjustments and returns. Exclude cash-back amounts from value, but do not exclude transactions that involved cash-back from number.

Online Payment Method Processor Survey

Glossary

Item	Definition
	United States: The states, territories, and possessions of the US, the District of Columbia, the Commonwealth of Puerto Rico, or any political subdivision of any of the foregoing.
1a	Redirected from merchant or biller site: Some merchants pass a customer to a third-party online payment service to provide authentication or instant credit.
1a.1	Normal payment (no delay/no instant credit): Typically used to obtain security credentials or logins in order to proceed with an authentication request. Customer pays using your organization's payment method using an established account (including the use of previously established credit accounts).
1a.2	Delayed payment/instant credit: Customer receives credit from your organization to be paid off in the future (e.g., Buy Now, Pay Later, "BNPL"). Please count the amount of the total purchase (e.g., the full amount financed in a "Pay in Four", or a no interest if paid in 6 months program.)
1c.	Token vault: Includes secure payments where a card or account number is tokenized so that it cannot be used for other transactions if the number is obtained by an unauthorized entity.
1d.	Other online payment methods: This includes crypto currency wallets or accounts.
3	Transaction value distribution: Your best estimate for the number and dollar value of transactions that fall within the "dollar size bands" requested.

The Federal Reserve Payments Study

Mobile Wallet Processor Payment Survey

Survey Period:
Calendar Year 2024

Responding to this collection is voluntary. The Federal Reserve may not conduct or sponsor, and an organization is not required to respond to, a collection of information unless it displays a currently valid OMB control number. Public reporting burden for this collection of information is estimated to be an average of 8 hours per response, including the time to gather and maintain data in the required form, to review the instructions and to complete the information collection. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to: Secretary, Board of Governors of the Federal Reserve System, 20th and C Streets, NW, Washington, DC 20551; and to the Office of Management and Budget, Paperwork Reduction Project (7100-0351), Washington, DC 20503.

Networks, Processors, and Issuers Payments Surveys (NPIPS)

Mobile Wallet Processor Payment Survey

Instructions

About this survey

This survey, part of the NPIPS, covers mobile wallet transactions that your organization processed for calendar year 2024 (CY2024). Allocations of transactions are requested for several category types, including transactions classified as fraudulent by an unauthorized third party. Counts of the number of provisioned mobile wallets are also requested.

About the study

This survey and other NPIPS surveys are part of the Federal Reserve Payments Study (FRPS), which is conducted by the Federal Reserve Bank of Atlanta and the Federal Reserve Board. Your response will be used in combination with peer responses to estimate national aggregate volumes for CY2024. Aggregate results will be compared to those of previous studies to track changes and identify trends in US payments.

Confidentiality

Any data you provide for this survey is strictly confidential. Individual responses to the survey will not be shared with the public or the industry.

Your participation

To achieve the most reliable results, it is important that you respond completely and accurately. If your organization outsourced payments processing to another organization during CY2024, please request the necessary data from that organization or provide them with the survey so they may respond on behalf of your organization.

>> Please respond by: June 13, 2025 <<

Data entry

Please enter annual data for CY2024 in the Annual Data Entry tab (i.e., worksheet). If estimated amounts rather than actual amounts are reported for any item(s), please explain in the comments field at the bottom of the tab. By default, tabs are protected and only cells needed for data entry are unlocked.

- 1. Direct data entry (light blue boxes). For numeric data, key in the actual number or dollar amount.
Note: Items left blank can be difficult to interpret and may generate follow-up questions. If a positive amount cannot be provided, please consider entering one of these alternatives:
* Enter "0" if the requested item is known to be zero. (This is appropriate for items that are not applicable to your organization.)
* Enter "NR" (not reported/not reportable) if the requested item is known to be nonzero but cannot be reported.
- 2. Automatic entry of calculations or repeated figures (dark blue box). Cells are protected, but different amounts may be entered into the override cells to the right (yellow box), if necessary. Only positive numeric amounts are valid for override cells.
(Automatic entry cells display "NR" until required information is provided.)
- 3. Option button selection. Click on the button with the option you would like to choose.
(In the example to the right, Option 1 is the default selection.)

Unexpected condition flags

As you fill out the survey, flags may be raised describing the results of simple arithmetic comparisons. These are intended to help you identify potential mistakes and, if appropriate, correct them. However, it may not always be appropriate to revise data when flags are raised, and you may choose to leave your response data as is. If that happens, please provide feedback and explanations in the comments field at the bottom of each tab. Your comments may help us understand your data and avoid the need for follow up.

Conditions that can raise a flag include:

- 1. **Logical inconsistencies:** These check for essential arithmetical relationships among items based on survey definitions and structure. They include adding-up conditions for items and their sub-items, pairing of zeros with nonzeros, and entry of NR when a known amount is implied by other reported item amounts.
Note: Leaving items blank will not throw flags. However, consistency problems may still exist when the amount is left blank but is implied by other related item amounts. Such cases can be checked by entering NR when an item is not reported/not reportable. If possible, please review your survey workbooks for any blank data-entry cells and replace them before submitting.
- 2. **Exceeding set boundaries:** These compare against lower and upper boundaries for averages and ratios. The boundaries are intended to allow a wide range, but may not be appropriate for your organization.

Examples

Item in Q3 is not equal to the sum of subitems: Q3 > Q3.a + Q3.b.
Inconsistent pair: Q3 Balance (\$) cannot be 0 if Q3 Number is nonzero.
Item should be reportable if all related items (Q2, Q2.b) are reported.

Example

This average value is unusually low.

Glossary

Definitions for selected terms can be found in the Glossary tab.

Submitting the completed survey

Submitted via Intralinks:

Please have your organization's Study Coordinator that established access to an Intralinks account submit this and any other survey workbooks.

To submit your completed survey, log in to your organization's Intralinks account where you will see a folder labeled with a unique numeric identifier assigned to your organization. Within this folder are two subfolders – one for submitting your data and the other for retrieving data that we may send you. Locate the Submit Data folder, and upload your completed survey workbooks on the encrypted Intralinks platform. Once we receive notification of your submission, acknowledgement of receipt will be sent to you from FRPSCommunications@atl.frb.org.

Questions?

If you have questions about the survey content or need assistance with the submission process, please contact the Federal Reserve Payments Study team at www.paymentsstudy.com.

Comments

Please provide any feedback and suggestions about the survey or submission process in the box below:

Annual Data Entry

Please report data on mobile wallet transactions and related information for calendar year 2024. Responding completely and accurately will help ensure accuracy of the aggregate estimates.

Include:

- * Only transactions originated on your mobile wallet platform, including those received on another system
- * All domestic and cross-border transactions associated with US-domiciled accounts

Do not include:

- * Transactions made from non-US-domiciled accounts to US payees

Definitions for selected terms can be found in the [Glossary](#) tab.

Please leave no item blank.
*** Enter "0" if an item is zero**
*** Enter "NR" if an item is nonzero but cannot be reported**

Calendar year 2024 mobile wallet transactions

1

Please indicate what type(s) of mobile wallet transactions are reported in your response to this survey.

- ☐ Open-use general-purpose (pay unaffiliated organizations)
- ☐ Closed-use (pay limited to issuers stores or affiliates)
- ☐ Both

Mobile Wallet Processor Payment Survey

Glossary

Item

Definition

Mobile wallet: A comprehensive digital solution designed to replace the physical wallet. It stores information about credit and debit cards, loyalty rewards, and any other digitized information (e.g., event tickets, boarding pass) – all managed, accessed and delivered via the mobile phone. Sensitive financial data is typically protected by a PIN, code, or biometric features and/or tokenization.

United States: The states, territories, and possessions of the US, the District of Columbia, the Commonwealth of Puerto Rico, or any political subdivision of any of the foregoing.

2a.1

In-person purchase transactions: Transactions for which an electronic device, such as a smartphone, smart watch, or activity tracker, was "tapped" to pay at the POS terminal (e.g., Apple Pay, Samsung Pay, Google Pay, Fitbit Pay) and private-label payment methods on mobile wallets supported by specific merchants. Such payments can be initiated through radio transmission RFID/NFC or optical barcode/QR code. Do not include payments initiated using a physical card or token.

2a.2

Remote purchase transactions (customer not at merchant location): In-app transactions or browser transactions made with a digital wallet. Browser transactions include both digital wallets (e.g., Apple Pay, Google Pay, Samsung Pay), third-party tokenized digital wallets (e.g., PayPal, Amazon Pay, Square Restaurants, Visa Checkout, Masterpass), and private-label payment methods on mobile wallets supported by specific merchants.

3a

Radio transmission RFID/NFC ("Tap" device at terminal): Payments are initiated by mobile device using a variety of secure radio methods. Contactless chip payments may use Radio Frequency Identification (RFID) and/or a specialized subset of Near-field Communications (NFC) standards to initiate and authenticate a purchase transaction.

3b

Optical barcode/QR code ("Scan" device display): Payments are initiated using a mobile device to scan barcode/QR code or entering an authentication code displayed on phone using the terminal keypad. Do not include NFC "Tap" transactions which should be entered in those fields listed above.

4

Transaction value distribution: Your best estimate for the number and dollar value of transactions that fall within the "dollar size bands" requested.
