Under the Endangered Species Act (ESA), determinations whether to list species as endangered or threatened must be based on the best scientific and commercial data available and after taking into account those efforts, if any, being made by any State or foreign nation (or any of their political subdivisions) to protect the particular species. On March 28, 2003, NMFS and the U.S. Fish and Wildlife Service (the “Services”) announced a final policy on the criteria the Services will use to evaluate certain conservation efforts by States, Tribes, and other non-Federal entities when making listing determinations under the ESA (68 FR 15100). The conservation efforts usually involve the development of a conservation plan or agreement, procedures for monitoring the effectiveness of the plan or agreement, and an annual report.

SUPPLEMENTARY INFORMATION:

I. Abstract

This request is for extension of a currently approved generic information collection.

This collection follows the guidelines contained in the OMB Resource Manual for Customer Surveys. In accordance with Executive Order 12862, the National Performance Review, and good management practices, the National Oceanic and Atmospheric Administration (NOAA) offices seek approval to continue to gather customer feedback on services and/or products which can be used in planning for service/product modification and prioritization. Under this generic clearance, individual offices would use approved questionnaires and develop new questionnaires, as needed, by selecting subsets of the approved set of collection questions and tailoring those specific questions to be meaningful for their particular programs. These proposed questionnaires would then be submitted to OMB using a fast-track request for approval process, for which separate **Federal Register** notices are not required.

This generic clearance will not be used to survey any bodies NOAA regulates unless precautions are taken to ensure that the respondents believe that they are not under any risk for not responding or for the contents of their responses, *e.g.*, in no survey to such a population will the names and addresses of respondents be required.

Two sets of survey questions are used for generation of program-level questionnaires. Quantitative questions seek to obtain numerical ratings from respondents on their satisfaction with various aspects of the product or service they obtained—satisfaction with the quality of the product, the courtesy of the staff, the format of and documentation for data received, and similar standard types of questions. The offices using such questions are able to determine which aspects of their program need improvement or have improved. Qualitative questions are more focused on who is using the product and service, how it is being used, and the medium or format in which the respondent would like to see data provided.

II. Method of Collection

Information will be collected via email or online survey.
