Advancing Data for Public Health Action Partner Survey

- Goal of the study (e.g., determine behavioral factors that influence changes in weight over time or evaluate program delivery process):
The goal of this study is to improve how CDC's future vision of advancing data for public health action is received by professionals working in state, tribal, local and territorial (STLT) health departments. This information will help inform improvements to CDC as a source of related public health information.
- Intended use of the resulting data (e.g., provide suggestions for improving community-based programs):
The data will be used to improve the CDC Office of Public Health Data Surveillance and Technology's (OPHDST's) efforts toward the future vision of advancing data for public health action.
- Methods to be used to collect (e.g., prospective cohort design, randomized trial, etc.):
Customer satisfaction survey
- The subpopulation to be studied (e.g., school-ages children in North Carolina, conference attendees):
The subpopulation includes members of CDC's engagement panel and CDC partners who are public health professionals working at STLT health departments. We will also share the survey link with our partner organizations after larger in-person events, for example: partner conferences and the STLT Connections monthly meeting.
- How data will be analyzed (e.g., logistic regression, descriptive statistics):
Descriptive statistics and charts will be developed to provide recommendations to OPHDST leadership to improve the future state, vision, public health data strategy, and the One CDC Data Platform.
