TITLE OF INFORMATION COLLECTION:

eICR Data Project

PURPOSE:

Electronic Initial Case Report (eICR) data is generated by electronic health record systems when an update is made to a patient encounter related to a reportable condition. This data is sent to jurisdictions as a signal for investigation into potential cases of these conditions. EICR data contains the entire encounter record from the EHR in highly technical format making it difficult for jurisdictions to use. The goal of this study is to learn how to improve eICR data format, composition, and provisioning to improve its acceptance by jurisdiction case investigation systems. EICR data is generated based on a standard which the CDC provides to make eICR data interoperable amongst jurisdictions. This exploration intends to improve those standards and associated tooling.

DESCRIPTION OF RESPONDENTS:

We intend to conduct 15 semi-structured 1:1 interviews with participants selected from Dallas County Health and Human Services Department (DCHHS) and Chicago Department of Public Health (CDPH). These participants include members of the eCR operations team, IT team, disease programs using eCR for case management and/or analysis, department leadership, and eCR project management team.
