SUPPLEMENTARY INFORMATION:

Title: FERC–715, (Annual
Transmission Planning and Evaluation
Report).

OMB Control No.: 1902–0171.

Type of Request: Three-year extension
of the FERC–715 information collection
requirements with no changes to the
current reporting requirements.

Acting under section 213 of the
Federal Power Act ¹ and 18 CFR
141.300, FERC requires each
transmitting utility that operates
integrated transmission system facilities
rated above 100 kilovolts (kV) to submit
annually:

- Contact information;
- Base case power flow data (if the
respondent does not participate in the
development and use of regional power
flow data);
- Transmission system maps and
diagrams used by the respondent for
transmission planning;
- A detailed description of the
transmission planning reliability criteria
used to evaluate system performance for
time frames and planning horizons used
in regional and corporate planning;
- A detailed description of the
respondent’s transmission planning

assessment practices (including, but not
limited to, how reliability criteria are
applied and the steps taken in
performing transmission planning
studies); and

- A detailed evaluation of the
respondent’s anticipated system
performance as measured against its
stated reliability criteria using its stated
assessment practices.

FERC–715 enables the Commission to
use the information as part of their
regulatory oversight functions which
includes:

- The review of rates and charges;
- The disposition of jurisdictional
facilities;
- The consolidation and mergers;
- The adequacy of supply and;
- Reliability of the nation’s
transmission grid.

FERC–715 also helps the Commission
resolve transmission disputes.
Additionally, the Office of Electric
Reliability (OER) uses the FERC–715
data to help protect and improve the
reliability and security of the nation’s
bulk power system. OER oversees the
development and review of mandatory
reliability and security standards and
ensures compliance with the approved
standards by the users, owners, and
operators of the bulk power system.
OER also monitors and addresses issues
concerning the nation’s bulk power
system including assessments of
resource adequacy and reliability.

Without the FERC–715 data, the
Commission would be unable to
evaluate planned projects or requests
related to transmission.

Type of Respondent: Integrated
transmission system facilities rated at or
above 100 kilovolts (kV).

Commission estimates the total annual
burden and cost ³ for this information
collection as follows.
