Preparing the MVT Special Emphasis Rep

Step 1 is to prepare your state/territory c
Step 2 is to enter the data in this spreads
Step 3 is to create the SER by populating

Step 1: Preparing State/Territory Data

Name	ICD-10-CM code

1a. Create Nonfatal MVT-Specific Injury Hospitalizations Data Set - The MVT-specific hospi
a MVT-related injury hospitalization subset. This is done using the ICD-10-CM codes for th
Indicators listed below.

For hospitalizations, one of these codes should be in the primary/principal diagnosis field

Instruction: Data in this tab is optional and can be referenced to see trends in data to fill in text sections of the Special Emphasis Report Form

This tab will automatically fill with data from the Year 1 through Year 5 tabs. The information in this tab can be used to complete the "Burden and Overview" section of the MVT Special Emphasis report. The average annual change in MVT injury age-adjusted rates per 100,000 over 5 years (not percentage change) is shown in this tab for hospitalizations, ED visits, and deaths across race/ethnicity, sex, and age groups.

ADDING GRAPHS TO PDF FORM:
Select and copy the Excel graph, then open Word and choose Paste > Paste Special and insert the graph into the document as a .png file. Next, right click on that image and select "Save as Picture." Choose a convenient location to save the file, such as your desktop. Return to the PDF form, click on the button to insert the image, and follow the prompts to select your image file. Please ensure your PDF editor is up to date to fill out the SER form. Refer to the demo recording from CSTE for additional guidance on filling in the SER form.

nintentional Motor Vehicle Traffic Injuries

<CURRENT YEAR>
<STATE>

UNDERSTANDING MVT INJURIES

very day, thousands of Americans are involved in motor vehicle crashes on public roadways that result njury or death. Unintentional Motor Vehicle Traffic (MVT) injuries include those to motor vehicle upants (drivers and passengers), motorcyclists, pedestrians, pedal cyclists, and other persons in shes that occur on roads and streets.>

rden and Overview

T injuries are a leading cause of spitalization and death in the United States l <jurisdiction>. For every MVT injury death in risdiction> there were <xx> non-fatal spitalizations and <xxx> emergency partment visits. Figure 1 reflects total counts <data year>. During a ten-year period, the rate MVT injury deaths <increased/decreased> e Figure 2), with the largest crease/decrease> occurring among those ed <xx–xx>.

Injuries by Type of Person

Figure 3 illustrates that most persons injured or killed by MVT injuries are occupants (drivers and passengers). In <data year>, occupants accounted for <xx>% of MVT deaths, <xx>% among hospitalizations, and <xx>% among ED visits. Table 1, and Figures 4 through Figure 6 will focus on occupant-related injuries.

MVT Injuries by Geography

In <data year> the majority of motor vehicle traffic occupant injuries in <jurisdiction> occurred in <sub-area>, and the highest rates per 100,000 residents were in <sub-area>.

MVT Injuries by Sex and Age Group

Males had higher non-fatal MVT-occupant hospitalization injury rates than did females (xxx per 100,000 and xxx per 100,000 respectively). Rates for both males and females <remained relatively stable> over the <x-year> period.
