- ☐ Unknown or not stated

***Imputability**

Which best describes the relationship between the transfusion and the reaction?

- ☐ No other evidence of environmental, drug or dietary risks.
- ☐ There are other potential causes present that could explain acute hemolysis, but transfusion is the most likely cause.
- ☐ Other present causes are most likely, but transfusion cannot be ruled out.
- ☐ Evidence is clearly in favor of a cause other than the transfusion, but transfusion cannot be excluded.
- ☐ There is conclusive evidence beyond reasonable doubt of a cause other than the transfusion.
- ☐ The relationship between the adverse reaction and the transfusion is unknown or not stated.

Did the transfusion occur at your facility? ☐ YES ☐ NO

When did the reaction occur in relation to the transfusion?

- ☐ Occurred during or within 2 hours of cessation of transfusion.
- ☐ Occurred 2 - 4 hours after cessation of transfusion.

Did the same reaction occur after the transfusion was restarted (rechallenge)? ☐ YES ☐ NO
