

Attachment #9- Messages to be Tested

Population	Number of Participants
Primary Care Physicians or Family/Internal Medicine Physicians	5
Obstetricians/Gynecologists (OB/GYNs)	5
Pediatricians	5
Oncologists	5
Nurse practitioners (NP) or physician assistants (PAs)	5
Healthcare providers (of any type) who work at federally qualified health centers (FQHCs) or community health centers	8
Total	33

- Please submit fewer messages if you think your content will take a longer time (> 5 minutes) to present. An example of a longer piece is a two-page infographic, a video, or a webpage.
- Please specify 1-2 audiences for each message from the list above.
- Add drafts/concepts of messages that have yet to be developed if needed.
- See the example line below.

Messages/Materials for Testing

POC/ Branch	Audience (pick 1-2 per content)	Message/Content (Please specify content type: social media graphic, social media text copy, video, etc.)	Testing Presentation (ex. Side-by-side, scroll through)	Probes (Why are you asking this?)

SAFER FOOD CHOICES FOR CHILDREN UNDER 5 YEARS OLD
Always follow the four steps to food safety: clean, separate, cook, and chill—the golden rule of food safety. Learn about common foodborne outbreaks and the foods linked to them.

Food Item	Why it's considered risky	How to make it safer
RAW MEAT	May be contaminated with bacteria, such as E. coli and Salmonella. Raw meat can also contain parasites.	Keep raw meat separate from other foods. Cook meat to the proper temperature. Use a meat thermometer to check the temperature. Cook meat to at least 165°F for poultry, 145°F for ground meat, and 145°F for whole meat.
RAW EGGS	May be contaminated with bacteria, such as Salmonella. Raw eggs can also contain parasites.	Use pasteurized eggs. Cook eggs until the yolk and white are firm. Do not use raw eggs in recipes for children under 5 years old.
RAW SEAFOOD	May be contaminated with bacteria, such as E. coli and Salmonella. Raw seafood can also contain parasites.	Keep raw seafood separate from other foods. Cook seafood to the proper temperature. Use a meat thermometer to check the temperature. Cook seafood to at least 145°F.
RAW MILK	May be contaminated with bacteria, such as E. coli and Salmonella. Raw milk can also contain parasites.	Use pasteurized milk. Do not drink raw milk. Do not use raw milk in recipes for children under 5 years old.
RAW BERRIES	May be contaminated with bacteria, such as E. coli and Salmonella. Raw berries can also contain parasites.	Wash berries thoroughly. Do not eat raw berries. Do not use raw berries in recipes for children under 5 years old.
RAW HERBS	May be contaminated with bacteria, such as E. coli and Salmonella. Raw herbs can also contain parasites.	Wash herbs thoroughly. Do not eat raw herbs. Do not use raw herbs in recipes for children under 5 years old.
RAW NUTS	May be contaminated with bacteria, such as E. coli and Salmonella. Raw nuts can also contain parasites.	Wash nuts thoroughly. Do not eat raw nuts. Do not use raw nuts in recipes for children under 5 years old.
RAW SEEDS	May be contaminated with bacteria, such as E. coli and Salmonella. Raw seeds can also contain parasites.	Wash seeds thoroughly. Do not eat raw seeds. Do not use raw seeds in recipes for children under 5 years old.

Safer/riskier food table for young children ([printable PDF](#))

your patients that are under age 5? (follow-up question: If not you, what HCP will likely discuss this with patient?)

- Are there any of your patients' parents you are more likely to share this with (under 5 and immunocompromised, under 5 with chronic conditions, only those that ask about safe food, etc.)?
- Do you agree with the foods that are listed as safer and riskier?
- Do you have time to explain to your patients' parents why foodborne illness is of concern for their child at their age?
- What information do you feel is missing/you'd like to see here?
- Would you prefer this resource be available for your patients' parents in another form (is a printable version or online link more helpful, something else)?

Kelsey/ OD	PCP and Oncologists (FQHCs and NP/PAs too if possible)	 The infographic is titled "SAFER FOOD CHOICES FOR PEOPLE WITH WEAKENED IMMUNE SYSTEMS". It features a table with two columns: "FOOD TYPE" and "SAFER CHOICE". The table lists various food types and provides specific recommendations for safer choices. For example, under "MEAT", it lists "Beef, pork, lamb, veal, and poultry" and recommends "Cooked to 165°F (74°C) and served hot". Under "EGGS", it lists "Eggs" and recommends "Cooked to 165°F (74°C) and served hot". Under "DAIRY", it lists "Milk, cheese, yogurt, and ice cream" and recommends "Pasteurized and served at room temperature or chilled". The infographic also includes a section for "FISH" and "SEAFOOD" with specific recommendations. At the bottom, there is a note about "SAFER FOOD CHOICES FOR PEOPLE WITH WEAKENED IMMUNE SYSTEMS" and a link to a printable PDF. Safer/riskier food table for people with weakened immune systems (printable PDF)	Scroll through focusing on each food type for ~30 seconds	- How likely are you to share this resource with your <i>immunocompromised patients?</i> (follow-up question: If not you, what HCP will likely discuss this with patient?) - Are there any of your patients you are more likely to share this with (<i>specific type(s) of immunocompromising conditions, older and immunocompromised, very young and immunocompromised, only those that ask about safe food, etc.</i>)? - Do you agree with the foods that are listed as safer and riskier? - Do you have time to explain to your patients why foodborne illness is of concern for them <i>due to their health condition?</i> - What information do you feel is missing/you'd like to see here? - Would you prefer this resource be available for your patients in another form (is a printable version or online link more helpful, something else)?
-----------------------	---	---	--	---

Kelsey/ OD	OB/GYNs and PCP (FQHCs and NP/PAs too if possible)	 Safer/riskier food table for pregnant people (printable PDF)	Scroll through focusing on each food type for ~30 seconds	- How likely are you to share this resource with your <i>pregnant patients</i>? (follow-up question: If not you, what HCP will likely discuss this with patient?) - Are there any of your patients you are more likely to share this with (<i>pregnant and immunocompromised, high-risk pregnancy, pregnant with chronic conditions, only those that ask about safe food, etc.</i>)? - Do you agree with the foods that are listed as safer and riskier? - Do you have time to explain to your patients why foodborne illness is of concern for them <i>due to pregnancy</i>? - What information do you feel is missing/you'd like to see here? - Would you prefer this resource be available for your patients in another form (is a printable version or online link more helpful, something else)?
