

Attachment #9- Messages to be Tested

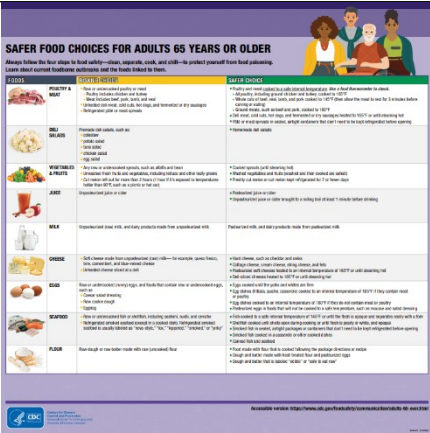

Population	Number of Participants
Primary Care Physicians or Family/Internal Medicine Physicians	5
Obstetricians/Gynecologists (OB/GYNs)	5
Pediatricians	5
Oncologists	5
Nurse practitioners (NP) or physician assistants (PAs)	5
Healthcare providers (of any type) who work at federally qualified health centers (FQHCs) or community health centers	8
<b>Total</b>	<b>33</b>

- Please submit fewer messages if you think your content will take a longer time (> 5 minutes) to present. An example of a longer piece is a two-page infographic, a video, or a webpage.
- Please specify 1-2 audiences for each message from the list above.
- Add drafts/concepts of messages that have yet to be developed if needed.
- See the example line below.

Messages/Materials for Testing

POC/ Branch	Audience (pick 1-2 per content)	Message/Content (Please specify content type: social media graphic, social media text copy, video, etc.)	Testing Presentation (ex. Side-by-side, scroll through)	Probes (Why are you asking this?)

SAFER FOOD CHOICES FOR CHILDREN UNDER 5 YEARS OLD	
Always follow the four steps to food safety: clean, separate, cook, and chill—the golden rule of food safety. Learn about current foodborne outbreaks and the foods linked to them.	
<b>MEATS</b>	<p><b>Safer choices:</b> Cooked meats, poultry, and seafood. Cooked meats, poultry, and seafood should be cooked to a minimum internal temperature of 165°F. Cooked meats, poultry, and seafood should be stored in the refrigerator for 3-4 days.</p> <p><b>Riskier choices:</b> Raw meats, poultry, and seafood. Raw meats, poultry, and seafood should be cooked to a minimum internal temperature of 165°F. Raw meats, poultry, and seafood should be stored in the refrigerator for 3-4 days.</p>
<b>DAIRY</b>	<p><b>Safer choices:</b> Pasteurized milk, cheese, and yogurt. Pasteurized milk, cheese, and yogurt should be stored in the refrigerator for 3-4 days.</p> <p><b>Riskier choices:</b> Raw milk. Raw milk should be cooked to a minimum internal temperature of 165°F. Raw milk should be stored in the refrigerator for 3-4 days.</p>
<b>EGGS</b>	<p><b>Safer choices:</b> Cooked eggs. Cooked eggs should be stored in the refrigerator for 3-4 days.</p> <p><b>Riskier choices:</b> Raw eggs. Raw eggs should be cooked to a minimum internal temperature of 165°F. Raw eggs should be stored in the refrigerator for 3-4 days.</p>
<b>SEAFOOD</b>	<p><b>Safer choices:</b> Cooked seafood. Cooked seafood should be stored in the refrigerator for 3-4 days.</p> <p><b>Riskier choices:</b> Raw seafood. Raw seafood should be cooked to a minimum internal temperature of 145°F. Raw seafood should be stored in the refrigerator for 3-4 days.</p>

Safer/riskier food table for young children ([printable PDF](#))

your patients that are under age 5? (follow-up question: If not you, what HCP will likely discuss this with patient?)

- Are there any of your patients' parents you are more likely to share this with (under 5 and immunocompromised, under 5 with chronic conditions, only those that ask about safe food, etc.)?
- Do you agree with the foods that are listed as safer and riskier?
- Do you have time to explain to your patients' parents why foodborne illness is of concern for their child at their age?
- What information do you feel is missing/you'd like to see here?
- Would you prefer this resource be available for your patients' parents in another form (is a printable version or online link more helpful, something else)?

<p>Kelsey/ OD</p>	<p>PCP and Oncologists (FQHCs and NP/PAs too if possible)</p>	 <p>The infographic is titled "SAFER FOOD CHOICES FOR PEOPLE WITH WEAKENED IMMUNE SYSTEMS". It features a table with two columns: "FOOD TYPE" and "SAFER CHOICES". The table lists various food types and provides specific recommendations for safer choices. Below the table, there is a section titled "Safer/riskier food table for people with weakened immune systems" with a link to a printable PDF.</p> <p>Safer/riskier food table for people with weakened immune systems (<a href="#">printable PDF</a>)</p>	<p>Scroll through focusing on each food type for ~30 seconds</p>	<ul style="list-style-type: none"> <li>- How likely are you to share this resource with your <i>immunocompromised patients?</i> (follow-up question: If not you, what HCP will likely discuss this with patient?)</li> <li>- Are there any of your patients you are more likely to share this with (<i>specific type(s) of immunocompromising conditions, older and immunocompromised, very young and immunocompromised, only those that ask about safe food, etc.</i>)?</li> <li>- Do you agree with the foods that are listed as safer and riskier?</li> <li>- Do you have time to explain to your patients why foodborne illness is of concern for them <i>due to their health condition?</i></li> <li>- What information do you feel is missing/you'd like to see here?</li> <li>- Would you prefer this resource be available for your patients in another form (is a printable version or online link more helpful, something else)?</li> </ul>
