Hello,

I would like to recommend that the data requested through CRDC be compiled from the data that has already been submitted by required submissions such as PEIMS state mandated submissions and also through College Board. This extensive requirement is a duplication of already accessible data. It is very stressful training staff each year on how to keep a completely separate spreadsheet or tracking system when the data is already stored and reported through other systems. Campus and department staff transfer, resign, and get hired consistently throughout the year and making sure the data is accessible in a timely manner to be reported is tedious. I plead that it be considered to populate the requested data from CRDC through other systems that already have the data. If additional data is not captured through PEIMS, it could be a new requirement. This will help eliminate the duplication of data, therefore eliminating additional stress during an already demanding season of Fall PEIMS (and resubmission), RF Tracker, ECDS-KG, Mid-Year PEIMS (and resubmission), SPPI-14, and Class Roster Winter.

I appreciate any consideration you are willing to give to this request.
