

Sample Progress Reporting Tool for

The information collected in this form will be used for internal monitoring of actual sample sizes to the target sample sizes on which power calculations were based for trials (RCTs), assess the likelihood that the final analytic results will meet the thresholds for overall or differential attrition specified by the protocol.

This form is for **CLUSTER ASSIGNMENT**. Complete this worksheet and the corresponding worksheet refer to the number of clusters. You will also need a separate worksheet for your sample of youth enrolled in these clusters.

To complete this form, enter information into the **YELLOW** cells. Instructions and formulas will pop up. **GREEN** cells will automatically calculate results. (Note: for multi-arm studies, this form should be completed for each arm. For additional support, please contact your LES liaison or PREIS team.)

A note on follow-up periods:

The PREIS Notice of Funding Opportunity defines short-term follow-up as 9 months or more post intervention. If you have different follow-up timeframes, please work with your LES liaison to select the timeframes to include in this tool.

The purpose of this information collection is to help PREIS grantees track participant retention. Public reporting burden for this collection of information is estimated to average 1 hour per respondent, including the time for reviewing instructions, gathering and maintaining the data needed, reviewing the collection of information. This is a voluntary collection of information and is not subject to the Paperwork Reduction Act of 1995, unless it displays a currently valid OMB control number. If you have any comments on this collection of information, please write to Selma Caal, Director of the Office of Community Engagement, at Selma.Caal@acf.hhs.gov.
