**SUPPLEMENTARY INFORMATION:** Overview: Federal Emergency Management Agency (FEMA) runs the Radiological Emergency Preparedness (REP) Program. This program helps state, tribal, and local governments plan, train, and prepare for emergencies involving commercial nuclear power facilities. It ensures that these governments can respond to and recover from such incidents. Legal Background: Section 109 of the NRC Authorization Act of 1980 (Pub. L. 96–295) requires the Nuclear Regulatory Commission (NRC) to include emergency preparedness as a condition for licensing nuclear power plants. This means that before a plant can operate, there must be an emergency response plan that meets FEMA and NRC standards. If there is no state or local plan, an alternative plan must provide reasonable assurance that public health and safety are protected. Regulations: The NRC has set regulations in 10 CFR part 50, which include 16 planning standards for emergency plans. FEMA has similar standards in 44 CFR part 350. FEMA reviews offsite emergency plans and preparedness in communities around commercial nuclear power facilities. States must conduct joint exercises involving local governments, the state, and the NRC licensee to ensure these plans are effective (see 44 CFR part 350.9). Reasonable Assurance: FEMA defines “reasonable assurance” as having adequate plans and preparedness to protect public health and safety in the event of an incident at a commercial nuclear power facility. This includes having the right procedures, trained personnel, facilities, equipment, and regular drills and exercises. FEMA works with other Federal agencies, State, Tribal, and local governments, and industry stakeholders to make this determination. Voluntary Participation: While participation in offsite radiological emergency planning is voluntary, those who choose to participate must follow the program requirements in 44 CFR part 350 and the joint NRC/FEMA document NUREG–0654/FEMA–REP–1, Rev. 2, “Criteria for Preparation and Evaluation of Radiological Emergency Response Plans and Preparedness in Support of Nuclear Power Plants,” and the REP Program Manual (RPM) provides detailed guidance on these requirements.
