Comment

I am submitting this comment as a veterinary student with an interest in infectious disease control. I support the collection of information discussed in this policy related to equine infectious anemia regulations. These tasks are essential to protecting equine health during the interstate movement of horses. Equine infectious anemia is a lifelong disease with no cure or treatment, which poses significant health impacts on the population of horses within the United States. Thus, routine testing, investigation of positive animals, laboratory oversight, and proper documentation are vital parts of disease surveillance and control. Furthermore, clear communication between everyone involved, including veterinarians, laboratories, and regulatory agencies, helps to identify infected horses quickly.
