General Comment

Enhance utility by requiring machine-readable fields (cemetery identifier, interment type, date ranges, remaining capacity) that align with existing federal grants data standards and can feed national geospatial planning tools. Clear, unambiguous definitions of “interment” and “grant-eligible activity” would improve data quality for both oversight and long-range demand forecasting tied to Veteran demographics. High-quality, standardized outputs would allow NCA and grantees to model future needs rather than react after capacity is exhausted.
