Continuing to protect the health and welfare of animal species remains a necessity. Providing opportunities for companion, livestock, and exotic owners to educate themselves on infectious diseases, zoonotic diseases, and additional health hazards will prove beneficial. As a person in veterinary medicine, it is of utmost importance that the community is aware of these health hazards, as it affects both the human and animal species. Once clients can recognize a possible disease outbreak, especially of a reportable nature, it can help veterinarians and other health officials to respond quickly and effectively. As for sample collection methods, I believe it is important that samples are accurately collected either under the supervision of a veterinarian or an industry professional.
