---

Greetings,

Under the proposal for the 2026 UDS report, there is the addition of Patient Support Services under Table 6A. This includes the provision of case management services. As proposed, the only codes in the data set are those for Chronic Care Management services for Medicare patients or codes for case conferences. To be more inclusive and comprehensive, the code set needs to include the Advanced Primary Case Management (APCM) codes, which were introduced in 2025 by CMS (G00556, G0557, G0558). Many health centers have transitioned to this approach in place of CCM due to additional reimbursement, particularly for dual-eligible Medicare/Medicaid patients. We are moving to APCM coding in 2026.

I also want to point out that we provide case management services to our Medicaid, private payer, and uninsured patients. These services are usually not reimbursable or are paid for through PMPM reimbursement. We use T1016 to track the provision of CM services in these circumstances and are counted as enabling services.

Please consider adding these additional codes (APCM and T1016) to the code set for Table 6A case management services.
