General Comment

I am writing in support of the continued development of data collection systems through the National Center for HIV, Viral Hepatitis, STD, and TB Prevention (NCHHSTP). Strong data collection is essential for monitoring the spread of infectious diseases and improving public health responses.

Accurate and timely data allows public health officials to identify trends in diseases such as HIV, STIs, and TB. This supports early intervention strategies, improves treatment outcomes, and helps prevent further transmission within communities. Strengthening these data systems will also help address health disparities by identifying populations that are disproportionately affected by these issues. Overall, I

support efforts to enhance disease surveillance and data collection systems to protect population health and help reduce the impact of infectious diseases.

CDC Reply to Comment:

Dear Kaylie Yono,

Thank you for your supportive public comment on Docket #CDC-2026-0232-0001. The National Center for HIV, Viral Hepatitis, STD, and TB Prevention (NCHHSTP) appreciates your support for data collection systems and enhanced disease surveillance.
