

are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submissions of responses.

Overview of This Information Collection

1. *Agency:* U.S. Immigration and Customs Enforcement, U.S. Department of Homeland Security.

2. *Title:* Generic Clearance for the Collection of Qualitative Feedback on Agency Service Delivery.

3. *OMB Number:* 1653–0050.

4. *Affected public who will be asked or required to respond, as well as a brief abstract:* Primary: Individuals or Households; Farms; Business or other for-profit; Not-for-profit institutions; State, local or Tribal governments; The information collection garners qualitative customer and stakeholder feedback in an efficient and timely manner, in accordance with the Administration’s commitment to improving delivery service. By qualitative feedback we mean information that provides useful insights on perceptions and opinions, but are not statistical surveys that yield quantitative results that can be generalized to the population of study. This feedback provides insights into customers or stakeholder perceptions, experiences and expectations, provides an early warning of issues with service, or focuses attention on areas where communication, training or changes in operations might improve delivery of products or services. These collections allow for ongoing, collaborative and actionable communications between the Agency and its customers and stakeholders. It also allows feedback to contribute directly to the improvement of program management. Feedback collected under this generic clearance provides useful information, but it will not yield data that can be generalized to the overall population. This type of generic clearance for qualitative information will not be used for quantitative information collections that are designed to yield reliably actionable results, such as monitoring trends over time or documenting program performance. Such data uses require more rigorous designs that address: The target population to which generalizations will be made, the sampling frame, the sample design (including stratification and clustering), the precision requirements or power calculations that justify the proposed sample size, the expected response rate, methods for assessing potential

nonresponse bias, the protocols for data collection, and any testing procedures that were or will be undertaken prior to fielding the study. Depending on the degree of influence the results are likely to have, such collections may still be eligible for submission for other generic mechanisms that are designed to yield quantitative results.

5. An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond: 2792 responses at 15 minutes per response.

6. An estimate of the total public burden (in hours) associated with the collection: 698 annual burden hours.

Comments Invited

In accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*), an agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a valid OMB control number. Therefore, in preparation for OMB review and approval of the following information collection, TSA is soliciting comments to—

Information Collection Requirement

Title: Real-Time Wait-Time Dashboarding.

Type of Request: New collection.

OMB Control Number: 1652–XXXX.

Form(s): N/A.

Affected Public: Airport and Aircraft Operators.

Abstract: Consistent with the requirements in section 1922 of the TSA Modernization Act, TSA intends to collect RTWT data voluntarily submitted by airport or aircraft operators. TSA has designed an internal dashboard and Application Programming Interface to ingest and store the RTWT data in 60-second or less intervals. The data will be collected electronically, as determined by agreement with the relevant airport operator, or aircraft operator. The data being collected is aggregated wait-time data across the various screening lane configurations (e.g., TSA PreCheck®, Standard, or any combination of screening types (e.g., Blended)) and does not contain any personally identifiable information.
