

Supporting Statement B for Stakeholder Feedback Survey
for OMB Control Number 2900-XXXX

B. Collections of Information Employing Statistical Methods

If the collection of information employs statistical methods, it should be indicated in Item 17 of OMB Form 83-I, and the following information should be provided in this Supporting Statement:

1. Description of the Activity

Describe the potential respondent universe and any sampling or other method used to select respondents. Data on the number of entities covered in the collection should be provided in tabular form for the universe as a whole and for each of the strata in the proposed sample. Indicate the expected response rates for the collection as a whole, as well as the actual response rates achieved during the last collection, if previously conducted.

Response:

The CFM Stakeholder Feedback Survey does not employ statistical methods in sampling or estimation. Rather, the survey is a census in which all potential respondents are invited to participate and given an equal opportunity to do so. Therefore, the contents of this supporting statement do not apply to the request.

2. Procedures for the Collection of Information-N/A

Describe any of the following if they are used in the collection of information:

- a. Statistical methodologies for stratification and sample selection;
- b. Estimation procedures;
- c. Degree of accuracy needed for the Purpose discussed in the justification;
- d. Unusual problems requiring specialized sampling procedures; and
- e. Use of periodic or cyclical data collections to reduce respondent burden.

3. Maximization of Response Rates, Non-response, and Reliability-N/A

Discuss methods used to maximize response rates and to deal with instances of non-response. Describe any techniques used to ensure the accuracy and reliability of responses is adequate for intended purposes. Additionally, if the collection is based on sampling, ensure that the data can be generalized to the universe under study. If not, provide special justification.

4. Tests of Procedures-N/A

Describe any tests of procedures or methods to be undertaken. Testing of potential respondents (9 or fewer) is encouraged as a means of refining proposed collections to reduce respondent burden, as well as to improve the collection instrument utility. These tests check for internal consistency and the effectiveness of previous similar collection activities.

5. Statistical Consultation and Information Analysis

Christopher Marshall, Blue Water Thinking, Inc. at (504) 377-6225.
